

An Elementary Approach to Design and Analysis of Algorithms Lekh Raj Vermani and Shalini Vermani

Contents

Chapter 1. Algorithms

Chapter 2. Growth of Functions

Chapter 3. Backtracking

Chapter 4. Divide and Conquer

Chapter 5. Greedy Algorithms

Chapter 6. Dynamic Programming

Chapter 7. Elementary Graph Algorithms

Chapter 8. Minimal Spanning Tree

Chapter 9. Single-Source Shortest Paths

Chapter 10. All Pairs Shortest Paths

Chapter 11. Flow Networks

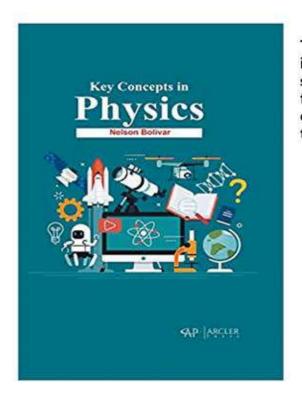

Chapter 12. Polynomial Multiplication, FFT and DFT

Chapter 13. String Matching

Chapter 14. Sorting Networks

Chapter 15. NP-Complete Problems

Key Concepts in Physics Nelson Bolivar

This book explains various key concepts and terms that are important in the context of physics. Physics is the branch of science that deals with the structure of matter and how the fundamental constituents of the universe interact. It studies objects ranging from the very small using quantum mechanics to the entire universe using general relativity.

Application-Driven Quantum and Statistical Physics : A Short Course for Future Scientists and Engineers Volume 1: Foundations

Jean-Michel Gillet

Essential Textbooks in Physics

Application-Driven Quantum and Statistical Physics

A Short Course for Future Scientists and Engineers

Volume 1: Foundations

Jean-Michel Gillet

Contents

Part I Experimental Puzzles and Birth of a New Constant in Physics Chapter 1. From Waves to Particles Chapter 2.From Particles to Wave Fields

Part II From Phenomenology to an Axiomatic Formulation of Quantum Physics

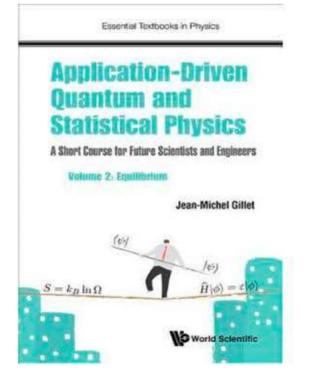

Chapter 3. A Heuristic Approach to Quantum Modelling

Chapter 4. Piecewise Constant Potentials

Chapter 5. Quantum Postulates and Their Mathematical Artillery

Part III A Classical to Quantum World Fuzzy Border Chapter 6.Phase Space Classical Mechanics Chapter 7. Quantum Criteria (Who Needs Quantum Physics?)

Application-Driven Quantum and Statistical Physics : A Short Course for Future Scientists and Engineers Volume 2 : Equilibrium Jean-Michel Gillet

Contents

Part I Model Hamiltonians and Approximations

Chapter 1. Vibrating Systems

Chapter 2. Rotating Systems

Chapter 3. Spin,a New degree of Freedom

Chapter 4. Central Coulombic Potential

Chapter 5. The N-electron Atom

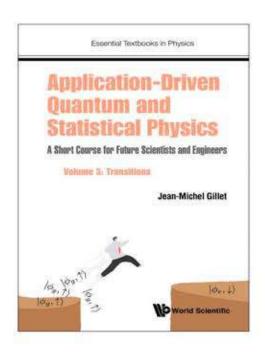

Part II Statistical Treatment of Large Assemblies at the Classical Limit

Chapter 6. Thermodynamics in the Macroworld

Chapter 7. Isolated Systems of Particles

Chapter 8. Regulated Systems of Classical Particles

Application-Driven Quantum and Statistical Physics : A Short Course for Future Scientists and Engineers Volume 3 Transitions Jean-Michel Gillet

Contents

Part I Quantum Statistics

Chapter 1. The Ideal Quantum Gases

Chapter 2. Fermion Gases

Chapter 3. Boson Gases

Part II Time-Dependent Transitions

Free Access

Part II: Time-Dependent Transitions

Chapter 4. Two-Level Couplings

Chapter 5. Time-Dependent Perturbation Theory

Chapter 6. Standard Approaches to Scattering

Part III. Photons

Chapter 7. From Electromagnetic Fields to Photons

Chapter 8. From One-Photon to Multiphoton Processes

Nonlinear optics Table of contents

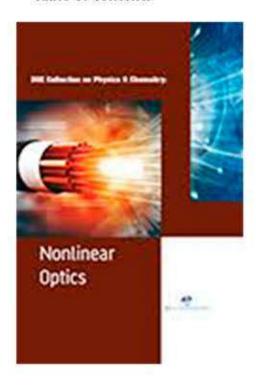

Table of contents

Chapter 1 The Concept of Nonlinear Optics

Chapter 2 Nonlinear Optical Materials

Chapter 3 Propagation of Light

Chapter 4 Photonics, Lasers in Nonlinear Optics

Chapter 5 Polarization of Light

Chapter 6 Electro-Optic Rectification

Chapter 7 Electromagnetic Waves

Nuclear Physics with Stable and Radioactive Ion Beams
Proceedings of the International School of Physics "Enrico Fermi" Course 201

Editors: Fabiana Gramegna, Piet Van Duppen, Andrea Vitturi, Sara Pirrone

Contents

- T. Otsuka Recent developments in shell model studies of atomic nuclei
- F. lachello Algebraic models of quantum many-body systems: The algebraic cluster model
- Y. Kanada-En'yo Clustering in light neutron-rich nuclei
- G. Colò Density Functional Theory (DFT) for atomic nuclei: A simple introduction

Antonio M. Moro - Models for nuclear reactions with weakly bound systems

- R. Raabe Nucleon-transfer reactions with radioactive ion beams
- G. Benzoni B decay studies of the most exotic nuclei
- W. Nörtershäuser New developments in laser spectroscopy for RIBs

Angela Bracco - The electric dipole excitation in nuclei: From zero to finite temperature

Silvia M. Lenzi - The f7/2 shell: An optimum test bench for nuclear-structure studies

- L.G. Moretto Structure function and collective effects in particle evaporation
- G. La Rana, E. Vardaci, A. Di Nitto, P.N. Nadtochy Fission dynamics in systems of intermediate fissility
- A. Pagano The time scale of nuclear reactions from Coulomb to Fermi energies
- R.A. Ricci 65 years with Nuclear Physics

Physics of Acoustics

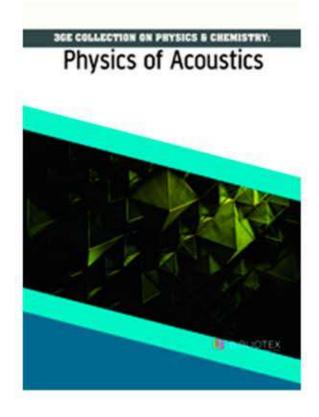

Table of contents

Chapter 1 Acoustics

Chapter 2 Sound Wave Propagation

Chapter 3 Wave Motion

Chapter 4 Resonators and Self-sustained Oscillations

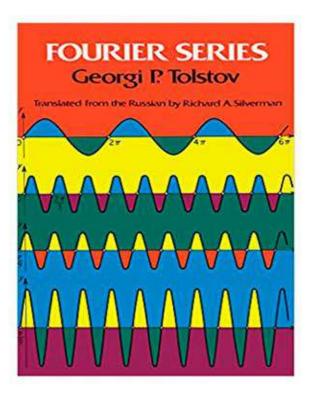

Chapter 5 Spherical Waves

Chapter 6 Duct Acoustics

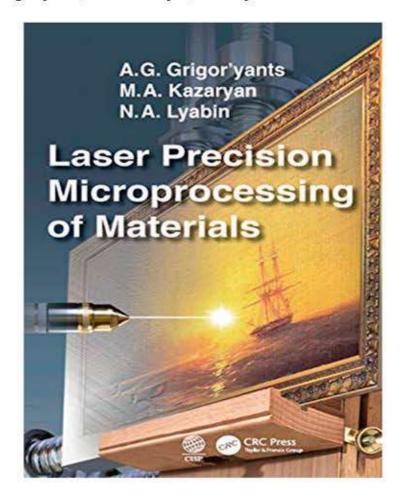

Chapter 7 Approximation Methods

Chapter 8 Wave Equation

Fourier Series Georgi P. Tolstov

- 1 Trigonometric Fourier Series
- 2 Orthogonal Systems
- 3 Convergence of Trigonometric Fourier
- 4 Trigonometric Series with Decreasing Coefficients
- 5 Operations on Fourier Series
- 6 Summation of Trigonometric Fourier
- 7 Double Fourier Series the Fourier Integral
- 8 Bessel Functions and Fourier-bessel Series
- 9 The Eigenfunction Method and its Applications to Mathematical Physics

- 1. Overview of the present state and development of copper vapour laser and copper vapour laser systems
- 2. Possibilities of pulsed copper vapour lasers and copper vapour laser systems for microprocessing of materials
- A new generation ofhighly efficient and long-term industrial sealed-off active elements of pulsed copper vapour laser of the Kulon series with a radiation power of 1-20 W and Kristall series with a power of 30-100 W
- 4. Highly selective optical systems for the formation of isingle-beam radiation of diffraction quality with stable parameters in copper vapour laser and copper vapour laser systems
- Industrial copper vapour lasers and copper vapourlaser systems based on the new generation of sealed-off active elements and new optical systems
- 6. Modern automated laser technological installation Karavella (ALTI)
- 7. Laser technologies of precision microprocessing of foil and thin sheet materials for components for electronic devices
- 8. Using industrial automatic laser technological installations Karavella-2M for the fabrication of precision parts for electronic devices

Circular Motion Editor: Toshihiko Murdaca

Circular Motion

Table of contents

Chapter 1 Introduction to Circular Motion

Chapter 2 Angular position

Chapter 3 Angular and Tangential Velocity

Chapter 4 Rectilinear and Curvilinear Motion

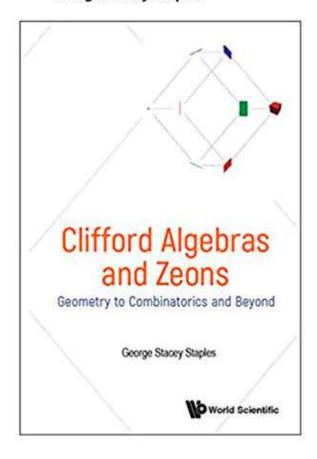

Chapter 5 Centripetal Acceleration

Chapter 6 Uniform Circular Motion

Chapter 7 Applications of Circular Motion

Clifford Algebras and Zeons : Geometry to Combinatorics and Beyond George Stacey Staples

Contents

The Essentials

1 Algebra

2 Combinatorics

Geometric Algebra

3 Geometry of the Complex Plane

4 Quaternions

5 Euclidean Clifford Algebras

6 Clifford Algebras of Arbitrary Signature

7 Decompositions in COQ(V)

8 From Geometry to Combinatorics

Algebraic Combinatorics & Zeons

9 Algebraic and Combinatorial Properties of Zeons

10 Zeon Polynomials

11 Norms and Inequalities in Zeon Algebras

12 Zeon Matrices

13 Zeon Functions and Factorizations

14 Zeon Differential Calculus

15 Graph Enumeration Problems

16 Graph Colorings and Chromatic Structures

17 Boolean Satisfiability

Induced Operators

18 Induced Operators and Kravchuk Polynomials

19 Graph-Induced Operators

20 Solutions and Hints to Selected Exercises

Fundamentals of Astrodynamics Second Edition

By: Jerry E. White, Roger R. Bate, William W. Saylor, Donald D. Mueller

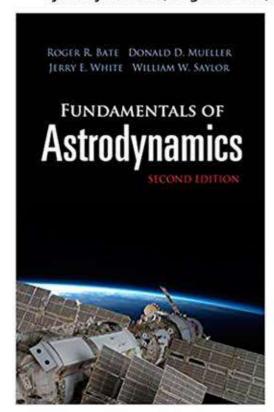

Table of Contents

Chapter 1 Two-Body Orbital Mechanics

Chapter 2 Orbit Determination from Observations

Chapter 3 Basic Orbital Maneuvers

Chapter 4 Position and Velocity as a Function of Time

Chapter 5 Orbit Determination from Two Positions and Time

Chapter 6 Ballistic Missile Trajectories

Chapter 7 Lunar Trajectories

Chapter 8 Interplanetary Trajectories

Chapter 9 Perturbations Chapter 10 Special Topics

Appendix A Astrodynamic Constants

Appendix B Vector Review Appendix C Gauss Problem

Appendix D Proposed Three-Line Element Set Definition

Wavelet Analysis

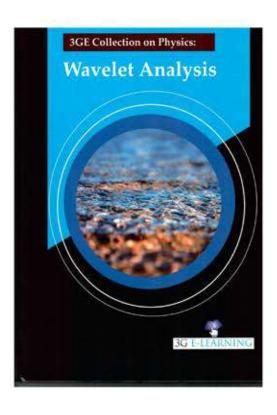

Table of contents

Chapter 1 Fundamentals of Wavelet Analysis

Chapter 2 Introduction to Wavelet Families

Chapter 3 Wavelet Transform

Chapter 4 Fourier Series and Fourier Analysis

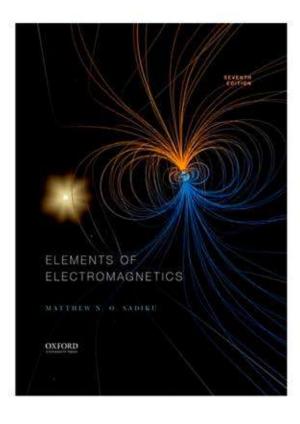

Chapter 5 Time-Frequency Analysis

Chapter 6 Complex Hilbert Space

Chapter 7 Finding and Designing a Wavelet

Chapter 8 Applications of Wavelet Transform in Image Processing

Elements of Electromagnetics Seventh edition Matthew N.O. Sadiku

Contents

PART 1: VECTOR ANALYSIS

- 1. VECTOR ALGEBRA
- 2. COORDINATE SYSTEMS AND TRANSFORMATION
- 3. VECTOR CALCULUS PART 2: ELECTROSTATICS
- 4. ELECTROSTATIC FIELDS
- 5. ELECTRIC FIELDS IN MATERIAL SPACE
- 6. ELECTROSTATIC BOUNDARY-VALUE PROBLEMS PART 3: MAGNETOSTATICS
- 7. MAGNETOSTATIC FIELDS
- 8. MAGNETIC FORCES, MATERIALS, AND DEVICES PART 4: WAVES AND APPLICATIONS
- 9. MAXWELL'S EQUATIONS
- 10. ELECTROMAGNETIC WAVE PROPAGATION
- 11. TRANSMISSION LINES
- 12. WAVEGUIDES
- 13. ANTENNAS
- 14. NUMERICAL METHODS

APPENDIX A: Mathematical Formulas APPENDIX B: Material Constants

APPENDIX C: MATLAB

APPENDIX D: The Complete Smith Chart

APPENDIX E: Answers to Odd-Numbered Problems

Illustrated Handbook of Heat and Mass Transfer

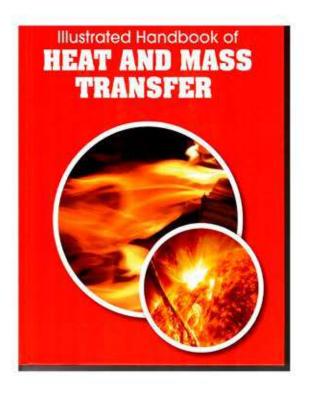

Table of contents

Chapter 1 Heat Transfer

Chapter 2 Conduction

Chapter 3 Convection

Chapter 4 Radiation

Chapter 5 Heat Exchanger

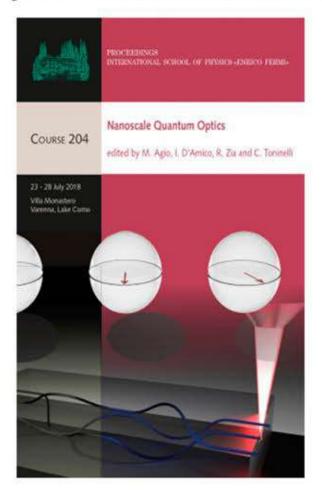

Chapter 6 Mass Transfer

Chapter 7 Cooling of Electronic Equipment

Nanoscale Quantum Optics

Proceedings of the International School of Physics "Enrico Fermi" Course 204

Editors : Mario Agio, Irene D'Amico, Rashid Zia, Costanza Toninelli

- . Irene D'Amico Basic concepts for quantum optics and quantum technologies
- . Nathalie P. de Leon Materials for quantum nanophotonics
- . Rahul Trivedi, Daniil Lukin, Jelena Vuckovic Quantum optics and nonclassical light generation

- . S. Tarragó Vélez, Christophe Galland Ultrafast photonic quantum correlations mediated by individual phonons

Femtosecond Physics: Laser-Matter Interaction Theory

Edited by: Stefano Spezia

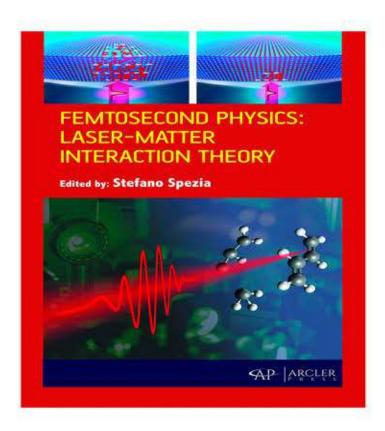

Table of contents

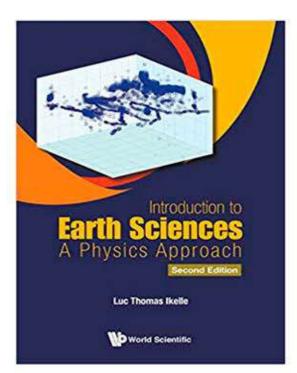

SECTION I TIME-DEPENDENT SCRÖDINGER EQUATION

- Chapter 1 Reduction of Time-Dependent Schrödinger Equations with Effective Mass to Stationary Schrödinger Equations
- Chapter 2 A Time-Dependent Anharmonic Oscillator
- Chapter 3 Effective Potential from the Generalized Time-Dependent Schrödinger Equation
- Chapter 4 Simple, Acurate, and Efficient Implementation of 1-Electron Atomic Time-Dependent Schrödinger Equation in Spherical Coordinates
- Chapter 5 Solving the Time-Dependent Few-Body Schrödinger Equation Within a Basis Expansion Method
- SECTION II FIELD-MATTER INTERACTION IN QUANTUM TWO-LEVEL SYSTEMS
- Chapter 6 Exact Broadband Excitation of Two-Level Systems by Mapping Spins to Springs
- Chapter 7 Pulsed Rabi Oscillations in Quantum Two-Level Systems: Beyond the Area Theorem
- Chapter 8 Evolution of a two-level Quantum Particle in the Noise Classical E.-M. Field Within and Beyond the Resonant Appriximation
- Chapter 9 Free-Space Quantum Electrodynamics with a Single Rydberg Superatom
- SECTION III ATOMS AND MOLECULES IN STRONG LASER FIELDS
- Chapter 10 Kinematic Origin for Near-Zero Energy Structures in Mid-Ir Strong Field Ionization
- Chapter 11 Single and Double Ionization od Atoms and Small Molecules by Short-Pulse Intense Laser Fields
- Chapter 12 Double Ionization of Molecule H2 in Intense Ultrashort Laser Fields
- Chapter 13 Laser Indunced Multiphoton Effects in Nano-Graphene
- Chapter 14 Few-Electron Ultrastrong Light-Matter Coupling in a Quantum LC Circuit
- Chapter 15 Suppressing Photochemical Reactions with quantized Light Fields

Introduction to Earth Sciences: A Physics Approach

2nd Edition

Luc Thomas Ikelle

Contents

1. A View of Earth: The Earth's Spheres

Part A: Gravity and Microgravity

- 2. Gravitational Forces
- 3. Gravitational Anomalies and Microgravity

Part B: Earthquake and Volcanoes

- 4. Seismic Waves and Evidences of Earth's Interior Structure
- 5. Earthquakes and Volcanoes
- 6. Tectonic Plate Theory
- 7. Earthquake Cycles

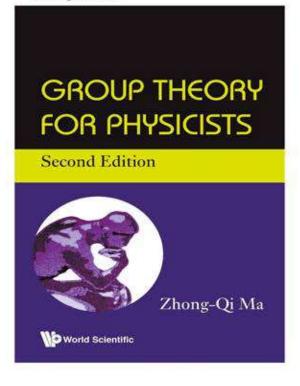

Part C: Earth's Climates

- 8. Climate and Heat Radiation
- 9. Geothermics
- 10. Electromagnetic Radiation in Vacuum
- 11. Electromagnetic Radiation in Matter
- 12. Origin of the Earth's Magnetic Field and Geomagnetic Anomalies
- 13. Energy-Balance Equations and the Greenhouse Effect
- 14. Climate Forcings

Part D: Energy Resources

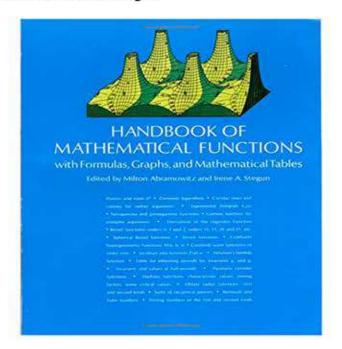

- 15. Energy Production and Consumption
- Biomass, Solar, and Wind Energy Resources: Fundamentals and Technology
- 17. Source Rocks and Seismology
- 18. Exploration, Production, and Monitoring

Group Theory for Physicists 2nd Edition Zhong-Qi Ma

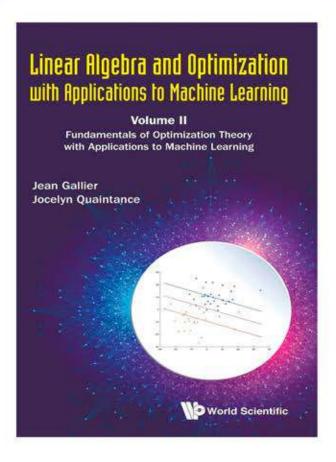

- 1 REVIEW ON LINEAR ALGEBRAS
- 2 GROUP AND ITS SUBSETS
- 3 THEORY OF REPRESENTATIONS
- 4 PERMUTATION GROUPS
- 5 THREE-DIMENSIONAL ROTATION GROUP
- **6 SYMMETRY OF CRYSTALS**
- 7 LIE GROUPS AND LIE ALGEBRAS
- 8 GEL'FAND'S METHOD AND ITS GENERALIZATION
- 9 UNITARY GROUPS
- 10 REAL ORTHOGONAL GROUPS
- 11 LORENTZ GROUPS
- 12 SYMPLECTIC GROUPS

Handbook of Mathematical Functions: with Formulas, Graphs, and Mathematical Tables Edited by: Milton Abramowitz, Irene A. Stegun

- 1. Mathematical Constants
- 2. Physical Constants
- 3. Elementary Analytical Methods
- 4. Elementary Transcendental Functions
- 5. Exponential Integral and Related Functions
- 6. Gamma Function and Related Functions
- 7. Error Function and Fresnel Integrals
- 8. Legendre Functions
- 9. Bessel Functions of Integer Order
- 10. Bessel Functions of Fractional Order
- 11. Integrals of Bessel Functions
- 12. Struve Functions and Related Functions
- 13. Confluent Hypergeometric Functions
- 14. Coulomb Wave Functions
- 15. Hypergeometric Functions
- 16. Jacobian Elliptic Functions and Theta Functions
- 17. Elliptic lintegrals
- 18. Weierstrass Elliptic and Related Functions
- 19. Parabolic Cylinder Functions
- 20. Mathieu Functions
- 21. Spheroidal Wave Functions
- 22. Orthogonal Polynomials
- 23. Bernoulli and Euler Polynomials, Riemann Zeta Function
- 24. Combinatorial Analysis
- 25. Numerical Interpolation, Differentiation and Integration
- 26. Probability Functions
- 27. Miscellaneous Functions
- 28. Scales of Notation
- 29. Laplace Transforms

Linear Algebra and Optimization with Applications to Machine Learning Volume II: Fundamentals of Optimization Theory with Applications to Machine Learning Jean Gallier and Jocelyn Quaintance

Contents

1. Introduction

Preliminaries for Optimization Theory

- 2. Topology
- 3. Differential Calculus
- 4. Extrema of Real-Valued Functions
- 5. Newton's Method and Its Generalizations
- 6. Quadratic Optimization Problems
- 7. Schur Complements and Applications

Linear Optimization

- 8. Convex Sets, Cones, ⋈-Polyhedra
- 9. Linear Programs
- 10. The Simplex Algorithm
- 11. Linear Programming and Duality

Nonlinear Optimization

- 12. Basics of Hilbert Spaces
- 13. General Results of Optimization Theory
- 14. Introduction to Nonlinear Optimization
- 16. Dual Ascent Methods; ADMM

Applications to Mschine Learning

- 17. Positive Definite Kernels
- 18. Soft Margin Support Vector Machines
- 19. Ridge Regression, Lasso, Elastic Net
- 20. v-SV Regression
