

Boletín de Adquisiciones Enero 2024

Continuous Groups for Physicists Narasimhaiengar Mukunda, and Subhash Chaturvedi

Contents

- 1 Group Theory and Representation Theory
- 2 The Symmetric Group
- 3 Rotations in 2 and 3 Dimensions, SU(2)
- 4 General Theory of Lie Groups and Lie Algebras
- 5 Compact Simple Lie Algebras Classification and Irreducible Representations
- 6 Spinor Representations of the Orthogonal Groups
- 7 Properties of Some Reducible Group Representations, and Systems of Generalised Coherent States
- 8 Structure and Some Properties and Applications of the Groups Sp(2n,⊠)
- 9 Wigner's Theorem, Ray Representations and Neutral Elements
- **10 Groups Related to Spacetime**

Cosmología de precisión :Trazando la forma y evolución del universo Celia Escamilla Rivera y Carlo Del Vecchyo Barrón

Contenido

Capítulo 1. Introducción

- Capítulo 2. Fundamentos matemáticos
- Capítulo 3. Relatividad general
- Capítulo 4. Estado del arte de la cosmología
- Capítulo 5. Dinámica y cinemática del universo
- Capítulo 6. Teorías alternativas a la gravedad
- Capítulo 7. Cosmología de precisión
- Capítulo 8. Epílogo

Elementary Particles and the Early Universe : A Synergy of Particle Physics and Cosmology in the Birth and Evolution of the Universe

Eitan Abraham and Andrés J. Kreiner

Contents

PART I Cosmology INTRODUCTION

- 1. Cosmology Essentials.
- 2. Horizons.
- 3. The Standard Big Bang Theory.
- 4. Inflationary Cosmology I Foundations.
- 5. Inflationary Cosmology II Beginning and End.
- 6. Inflationary Cosmology III Quantum Fluctuations and the Origin of Galaxies and Multiple Universes.

PART II Particle Physics

7 The Standard Model of Particle Physics I - Particles and Fields.

PART III Elementary particles and the first 375,000 years of the universe

8. Thermal History and the Universe and Beyond. Appendices.

Environmental Geochemistry Pratibha Singh

Table of contents

Chapter 1 Introduction to Environmental Geochemistry Chapter 2 Medical Geochemistry of Tropical Environments Chapter 3 Sustainable Waste Management and Environmental Impacts of Metallurgical Slags Chapter 4 Environmental Geochemistry of Radioactive Contamination Chapter 5 The Toxicological Geochemistry of Materials of Earth

- Chapter 6 Geochemical Fingerprinting
 - **Chapter 7 Formation And Impacts of Smog**
- **Chapter 8 Petroleum Geochemistry**

Extraterrestrial Remote Sensing and Climate Change Saumitra Mukherjee

Saumitra Mukherjee

Extraterrestrial Remote Sensing and Climate Change

Contents

- 1 Extraterrestrial Remote Sensing
- 2 Principles of Remote Sensing of Sun-Earth Climate
- 3 Extraterrestrial Remote Sensing Satellites
- 4 Extraterrestrial Satellite Data Collection and Interpretation
- 5 Terrestrial Satellite Data Correlation with Extraterrestrial Satellite
- 6 Solar Eclipse and Climate Change
- 7 Snowfall Influenced by the Changes in the Sun
- 8 Rainfall Prediction by Cosmic Ray Variability
- 9 Earthquake Prediction by Using Solar and Cosmic Ray Data
- 10 Global Warming and Changes in the Sun
- **11 Extraterrestrial Remote Sensing of Planets**
- 12 Remote Sensing of the Moon of the Earth
- **13 Remote Sensing of Mars**
- 14 Future of Extraterrestrial Remote Sensing

Geometric Quantum Mechanics Michel van Veenendaal

Contents

- 1 Space
- 2 Spacetime
- **3 Single-particle problems**
- 4 Many-particle systems
- 5 Collective and emergent phenomena

Appendix A Solutions to Problems

Introduction to Strong Interactions Theory and Applications By Andrey Grabovsky

Introduction to Strong Interactions

Theory and Applications

Andrey Grabovsky

Contents

Chapter 1. SU(N) Group.

- CHapter 2. SU(3) Color Gauge Invariance.
- **Chapter 3. Functional integration.**
- Chapter 4. Gauge fixing and Calculation Rules.
- Chapter 5. Strong Coupling.
- Chapter 6. Effective Action.
- Chapter 7. Renormalization.
- Chapter 8. Scale Anomaly.
- Chapter 9. Adler-Bell-Jakiw Anomaly.
- Chapter 10. Continuous Non-color Symmetries.
- Chapter 11. Collinear Factorization. Deep inelastic scattering.

Mathematical Physics for Nuclear Experiments By Andrew E. Ekpenyong

Contents

Chapter 1 Radioactivity and Decay Law Chapter 2 Probability and Statistics for Nuclear Experimental Data Chapter 3 Energy Loss of Heavy Charged Particles through Matter Chapter 4 Energy Loss of Electrons and Positrons through Matter Chapter 5 Interactions of Photons in Matter

APPENDIX A General Mathematical Definitions and Derivations APPENDIX B Experimental Data: from Creighton University NIM Lab APPENDIX C Nuclear Physics Databases: E-sources

Night Vision : Exploring the Infrared Universe Michael Rowan-Robinson

Contents

Preface

- 1. Introduction
- 2. William Herschel opens up the invisible universe
- 3. 1800–1950: slow progress the moon, planets, bright stars, and the discovery of interstellar dust
- 4. Dying stars shrouded in dust and stars being born: the emergence of infrared astronomy in the 60s and 70s
- 5. Birth of far infrared and submillimetre astronomy: clouds of dust and molecules in our Galaxy
- 6. The cosmic microwave background, echo of the Big Bang
- 7. The Infrared Astronomical Satellite and the opening up of extragalactic infrared astronomy: starbursts and active galactic nuclei
- 8. The Cosmic Background Explorer and the ripples, the Wilkinson Microwave Anisotropy Explorer, and dark energy
- 9. Giant ground-based infrared and submillimetre telescopes
- 10. The Infrared Space Observatory and the Spitzer Space Telescope: the star-formation history of the universe and infrared galaxy populations
- 11. Our dusty Solar System, debris disks and the search for exoplanets
- 12. The future: pioneering space missions and giant ground-based telescopes

Quantum Mechanics I The Fundamentals

By S. Rajasekar, R. Velusamy

Contents

- 1. Why Was Quantum Mechanics Developed?
- 2. Schrödinger Equation and Wave Function.
- 3. Operators, Eigenvalues and Eigenfunctions.
- 4. Exactly Solvable Systems I: Bound States.
- 5. Exactly Solvable Systems II: Scattering States.
- 6. Matrix Mechanics.
- 7. Various Pictures in Quantum Mechanics and Density Matrix.
- 8. Heisenberg Uncertainty Principle.
- 9. Momentum Representation.
- 10. Wave Packet.
- 11. Theory of Angular Momentum.
- 12. Hydrogen Atom.
- 13. Approximation Methods I: Time-Independent Perturbation Theory
- 14. Approximation Methods II: Time-Dependent Perturbation Theory.
- 15. Approximation Methods III: WKB and Asymptotic Methods.
- 16. Approximation Methods IV: Variational Method.
- **17. Scattering Theory.**
- 18. Identical Particles.
- **19. Relativistic Quantum Theory.**
- 20. Mysteries in Quantum Mechanics.
- 21. Delayed-Choice Experiments.
- 22. Fractional Quantum Mechanics.
- 23. Numerical Methods for Quantum Mechanics.

Quantum Mechanics II Advanced Topics By S. Rajasekar, R. Velusamy

- 1. Quantum Field Theory.
- 2. Path Integral Formulation.
- 3. Supersymmetric Quantum Mechanics.
- 4. Coherent and Squeezed States.
- 5. Berry's Phase, Aharonov–Bohm and Sagnac Effects.
- 6. Phase Space Picture and Canonical Transformations.
- 7. Quantum Entanglement.
- 8. Quantum Decoherence.
- 9. Quantum Computers.
- 10. Quantum Cryptography.
- 11. No-Cloning Theorem and Quantum Cloning Machines.
- 12. Quantum Tomography.
- 13. Quantum Simulation.
- 14. Quantum Error Correction.
- **15. Some Other Advanced Topics.**
- 16. Quantum Technologies.

Nuclear Renaissance Technologies and Policies for the Future of Nuclear Power. 2^a ed. By William J. Nuttall

William J. Nuttall

Contents

Part I. Introduction.
Chapter 1 Beginnings.
Chapter 2 Nuclear Renaissance: Progress and Prospects.
Part II. The Policy Landscape.
Chapter 3 Issues in Energy Policy.
Chapter 4 The Issues Facing New Nuclear Build.
Chapter 5 Nucelar Waste Management.
Part III. Nuclear Fission Technologies.
Chapter 6. Water-cooled Reactors.
Chapter 7. High-temperature Reactors.
Chapter 8. Advanced Fission Technologies and Systems.
Part IV. Nuclear Fusion Technologies.
Chapter 9. Fusion: An Introduction.

Physics of Binary Star Evolution: From Stars to X-ray Binaries and Gravitational Wave Sources Thomas M. Tauris and Edward P.J. van den Heuvel

CRC Press

- Preface
- **1** Introduction: The Role of Binary Star Evolution in Astrophysics
- 2 Historical Notes on Binary Star Discoveries
- **3** Orbits and Masses of Spectroscopic Binaries
- 4 Mass Transfer and Mass Loss in Binary Systems
- 5 Observed Binaries with Non-degenerate or White Dwarf Components
- 6 Observed Binaries with Accreting Neutron Stars and Black Holes: X-ray Binaries
- 7 Observed Properties of X-ray Binaries in More Detail
- 8 Evolution of Single Stars
- 9 Stellar Evolution in Binaries
- **10 Formation and Evolution of High-mass X-ray Binaries**
- **11 Formation and Evolution of Low-mass X-ray Binaries**
- 12 Dynamical Formation of Compact Star Binaries in Dense Star Clusters
- 13 Supernovae in Binaries
- **14 Binary and Millisecond Pulsars**
- **15 Gravitational Waves from Binary Compact Objects**
- **16 Binary Population Synthesis and Statistics**

Plasma Physics : An Introduction. 2^a ed. By Richard Fitzpatrick

Contents

- Chapter 1 Plasma Parameters Chapter
- Chapter2 Charged Particle Motion
- Chapter 3 Collisions
- Chapter 4 Plasma Fluid Theory
- **Chapter 5 Waves in Cold Plasmas**
- Chapter 6 Waves in Inhomogeneous Plasmas
- Chapter 7 Waves in Warm Plasmas
- **Chapter 8 Magnetohydrodynamical Fluids**
- Chapter 9 Magnetic Reconnection.

Superatoms An Introduction By Nicola Gaston

Superatoms An Introduction

Nicola Gaston

CRC Press

- Chapter 1. What Makes an Atom?
- **Chapter 2. Electronic Shell Structure.**
- **Chapter 3. From the Jellium Model to Density Functional Theory.**
- **Chapter 4. From Density Functional Theory to Properties.**
- **Chapter 5. Real Metal Clusters.**
- Chapter 6. Non-Metal Superatoms.
- **Chapter 7. Ligand Protected Metal Clusters.**
- **Chapter 8. Beyond Simple Superatoms.**
- **Chapter 9. Superatomic Assemblies.**

Tipografía y notaciones científicas Javier Bezos López

Índice

- 1. Letras, c
- ifras, signos, blancos
- 2. Fórmulas matemáticas
- 3. Unidades
- 4. Química
- 5. Taxonomía
- 6. Estructura del texto
- 7. Ilustraciones y cuadros
- 8. Los índices
- A. Herramientas
- B. Letras griegas
- **C.** Fuentes y Unicode

The Math of Body, Soul, and the Universe By Norbert Schwarzer

Contents

Personal Motivation

Some Fundamental Motivation

Seven Days

- The First Day: Let There Be Nothing
- 1. Making Contact with Quantum Gravity
- The Second Day: Let There Be Photons
- 2. Societons and Ecotons
- 3. Humanitons—The Intrinsic Photons of the Human Body Understand Them and Cure Yourself
- 4. Social Distancing
- 5. Mastering Human Crises with Quantum Gravity-Based but Still Practicable Models
- The Third Day: Let There Be Mass and Inertia
- 6. Masses and the Infinity Options Principle
- 7. The Three Generations of Elementary Particles
- The Fourth Day: Let There Be Quantum Gravity
- 8. Toward Quantum Einstein Field Equations
- The Fifth Day: Let There Be a Dirac Equation
- 9. The Metric Dirac Equation Revisited and the Geometry of Spinors
- 10. The Dirac Miracle
- The Sixth Day: A Math for Body, Soul, and Universe
- 11. A Curvy Math to Salvation
- **12. About the Flatness Problem in Cosmology**
- 13. Mathematical Tools for Socioeconomic and Psychological Simulations
- The Seventh Day: Give It Some Rest
- 14. About the Origin of the Minimum Principle

Trends in Biophysics From Cell Dynamics Toward Multicellular Growth Phenomena Edited By Pavel Kraikivski

Contents

- 1. Mammalian Cell Cycle Regulation
- 2. Spindles and Active Vortices
- 3. Actomyosin-Dependent Cortical Dynamics
- 4. Filament Depolymerization During Bacterial Mitosis
- 5. Actin Ring Constriction
- 6. Curved Activators and Cell-Membrane Waves
- 7. Actin Waves and Phagocytic Cup Structures
- 8. Yeast and Scaling
- 9. Cellular Shapes from Protrusive and Adhesive Forces
- **10. Amoeboid Cells' Protrusions**
- **11. Collective Cell Migration**
- 12. Differential Adhesion and Cell Sorting

The Statistical Physics of Data Assimilation and Machine Learning Henry D. I. Abarbanel

The Statistical Physics of Data Assimilation and Machine Learning

Henry D. I. Abarbanel

- 1 A Data Assimilation Reminder
- 2 Remembrance of Things Path
- **3** SDA Variational Principles
- **4** Using Waveform Information
- 5 Annealing in the Model Precision R f
- 6 Discrete Time Integration in Data Assimilation Variational Principles: Lagrangian and Hamiltonian Formulations
- 7 Monte Carlo Methods
- 8 Machine Learning and Its Equivalence to Statistical Data Assimilation
- 9 Two Examples of the Practical Use of Data Assimilation
- **10 Unfinished Business**

The Science of Nanomaterials Basics and Applications Edited By Suresh C. Ameta, and Rakshit Ameta

- 1. Nanomaterials: An Introduction
- 2. Optical Properties of Nanostructured Materials and Their Sensing Applications
- 3. Nanotechnology for Selective Targeting and Cancer Drug Delivery
- 4. Cogent and Strategic Approaches for Gene Delivery with Nanostructures
- 5. Nanomaterials for Nanomedical and Nanobiotechnological Studies: Current Status and Applications of Carbon-Based Nanomaterials and Quantum Dots
- 6. Carbon Nanotubes for Photosplitting of Water
- 7. Nanomaterials as Effective Tools for Detection and Microbial Diagnosis of Foodborne Pathogens
- 8. Use of Nanomaterials in Wastewater Treatment
- 9. Layer-by-Layer Assembly as a Powerful Nanofabrication Technique for the Design of Antimicrobial Surfaces in the Textile Industry
- 10. Prospect of Utilizing Novel Nanomaterials for Effective Food Security, Safety, Packaging, and Preservation
- 11. Bio- and Synthetic Nanocomposites for Food Packaging
- 12. Fabrication and Applications of Nanocomposites
