# Adquisiciones Febrero 2020 Parte 1

JCIAPSKI, 51.

Modern Classical Physics: Optics, Fluids, Plasmas, Elasticity, Relativity, and Statistical Physics Kip S. Thorne and Roger D. Blandford

#### CONTENTS

**PART I FOUNDATIONS 1** 

1 Newtonian Physics: Geometric Viewpoint 2 Special Relativity: Geometric Viewpoint PART II STATISTICAL PHYSICS

3 Kinetic Theory
4 Statistical Mechanics
5 Statistical Thermodynamics
6 Random Processes
PART III OPTICS

7 Geometric Optics 8 Diffraction 9 Interference and Coherence 10 Nonlinear Optics

PART IV ELASTICITY 11 Elastostatics 12 Elastodynamics

#### PART V FLUID DYNAMICS

- **13 Foundations of Fluid Dynamics**
- **14 Vorticity**
- **15 Turbulence**
- 16 Waves
- **17 Compressible and Supersonic Flow**
- **18 Convection**
- **19 Magnetohydrodynamics**

#### PART VI PLASMA PHYSICS

- 20 The Particle Kinetics of Plasma
- 21 Waves in Cold Plasmas: Two-FluidFormalism
- 22 Kinetic Theory of Warm Plasmas
- 23 Nonlinear Dynamics of Plasmas

PART VII GENERAL RELATIVITY 24 From Special to General Relativity 25 Fundamental Concepts of GeneralRelativity 26 Relativistic Stars and Black Holes

- 27 Gravitational Waves and Experimental Tests of General Relativity
- 28 Cosmology

#### Quantum Fields: From the Hubble to the Planck Scale **Michael Kachelriess**

**Quantum Fields** From the Hubble to the Planck Scale

MICHAEL KACHELRIESS

**OXFORD GRADUATE TEXTS** 

#### Contents

- **1** Classical mechanics
- 2 Quantum mechanics
- 3 Free scalar field
- 4 Scalar field with λφ4 interaction
- 5 Global symmetries and Noether's theorem
- **6** Spacetime symmetries
- 7 Spin-1 and spin-2 fields
- 8 Fermions and the Dirac equation
- 9 Scattering processes
- **10 Gauge theories**
- **11 Renormalisation I: Perturbation theory**
- 12 Renormalisation II: Improving perturbation theory
- 13 Symmetries and symmetry breaking
- 14 GSW model of electroweak interactions
- **15 Thermal field theory**
- 16 Phase transitions and topological defects
- 17 Anomalies, instantons and axions
- 18 Hadrons, partons and QCD
- **19 Gravity as a gauge theory**
- 20 Cosmological models for an homogeneous, isotropic universe
- **21 Thermal relics**
- 22 Baryogenesis
- 23 Quantum fields in curved spacetime
- 24 Inflation
- 25 Black holes
- 26 Cosmological constant

#### **Cosmical Magnetic Fields: Their Origin and their Activity** E. N. Parker

- 1. The Role of Magnetic Fields
- 2. The Nature of Magnetic Fields
- 3. Electric and Magnetic Fields
- 4. The Basic Equations
- 5. Magnetic Field Stress and Energy
- 6. Magnetic Equilibrium
- 7. Propagation of Disturbances
- 8. The Isolated Flux Tube
- 9. The Twisted Flux Tube
- 10. The Isolation and Concentration of Magnetic Flux Tubes
- 11. The Topology of Magnetic Lines of Force
- 12. Non-Equilibrium of Invariant Fields
- 13. The Breakup and Escape of Submerged Magnetic Fields
- 14. Non-Equilibrium in Field Topologies Lacking Invariance
- 15. Rapid Reconnection of Magnetic Lines of Force
- 16. Exclusion of Magnetic Fields from Closed Circulation Patterns
- **17. Magnetic Fields in Turbulent Fluids**
- 18. The Generation of Large-Scale Fields in Turbulent Fluids
- 19. The Physical Nature of the Generated Fields
- 20. The Magnetic Fields of Planets
- 21. The Magnetic Field of the Sun and Stars
- 22. The Magnetic Field of the Galaxy
- 23. Magnetic Fields and Magnetic Activity

Functional Supramolecular Materials: From Surfaces to MOFs Editor: Rahul Banerjee

- Chapter 1 Surface Self-assembly of Functional Supramolecular Networks
- Chapter 2 Designing Soft Supramolecular Materials Using Intermolecular Interactions
- Chapter 3 Anion Binding in Tripodal Receptors and Supramolecular Capsular Dimeric Assemblies
- Chapter 4 Functional Molecular and Supramolecular Materials for Electron Transfer Reactions and their Applications
- **Chapter 5** Influence of Supramolecular Interactions on the Solid-state Photoreactivity of Metal Complexes
- Chapter 6 Metal-organic Frameworks with Tunable Electrical and Optical Properties
- **Chapter 7 Conducting Framework Materials**
- Chapter 8 Functional Metal-organic Frameworks for Enzyme/Protein Immobilization
- Chapter 9 Porous Metal Organic Polygons and Polyhedra Intrinsic vs. Extrinsic Porosity
- Chapter 10 Functional Metallo-supramolecular Polyhedral Capsules and Cages
- Chapter 11 Designing Functional Porous Organic Frameworks for Gas Storage and Separation
- **Chapter 12 Gated and Stepwise Sorption Processes in Functional Metal-organic Frameworks**

#### The Copenhagen Conspiracy David Ferry

#### Contents

- 1 In the Beginning
- 2 The arrival of Bohr's Atomic Theory
- 3 Arrival of the New Quantum Theory
- 4 Solvay
- 5 Interregnum
- 6 1935
- 7 The Rising Storm
- 8 Bell's Inequality
- 9 Measurementan?
- 10 What Does It All Me

Supramolecular Materials for Opto-Electronics Editor: Norbert Koch

#### Contents

Chapter 1 Self-assembled Supramolecular Materials in Organic **Electronics Chapter 2 Multicomponent Assembly Strategies for** Supramolecular Systems Chapter 3 Low-Dimensional Supramolecular Assemblies on Surfaces Chapter 4 Self-Assembled Mono- and Multilayers for Functional **Opto-Electronic Devices** Chapter 5 Amphiphilic Design for Supramolecular Materials with **Opto-Electronic Functions Chapter 6 Chiral Supramolecular Structures as Spin Filters Chapter 7 Solution Processed Multilayer Organic Light Emitting** Diodes **Chapter 8 Concepts and Modeling for Charge Transport in Organic Electronic Materials Chapter 9 Simulations of Morphology and Charge Transport in Supramolecular Organic Materials** 

Chondrules : Records of Protoplanetary Disk Processes Edited by: Sara S. Russell, Harold C. Connolly and Alexander N. Krot

- 1. Introduction Part I. Observations of Chondrules
- 2. Multiple mechanisms of transient heating events in the protoplanetary disk: evidence from precursors of chondrules and igneous Ca, Al-rich inclusions
- 3. Thermal histories of chondrules: petrologic observations and experimental constraints
- 4. Composition of chondrules and matrix and their complementary relationship in chondrites
- 5. The chondritic assemblage: complementarity is not a required hypothesis
- 6. Vapor-melt exchange: constraints on chondrite formation conditions and processes
- 7. Chondrules in enstatite chondrites
- 8. Oxygen isotope characteristics of chondrules from recent studies by secondary ion mass spectrometry
- 9. 26Al-26Mg systematics of chondrules
- 10. Tungsten isotopes and the origin of chondrules and chondrites
- 11. The absolute Pb-Pb isotope ages of chondrules: insights into the dynamics of the solar protoplanetary disk
- 12. Records of magnetic fields in the chondrule formation environment
- Part II. Possible Chondrule Forming Mechanisms
- 13. Formation of chondrules by planetesimal collisions
- 14. Making chondrules by splashing molten planetesimals: the dirty impact plume model
- 15. Formation of chondrules by shock waves
- 16. Evaluating non-shock, non-collisional models for chondrule formation
- **17. Summary of Key Outcomes**

#### **Organic Molecular Solids** Markus Schwoerer and Hans Christoph Wolf

#### PHYSICS TEXTBOOK

#### Markus Schwoerer Hans Christoph Wolf

### Organic Molecular Solids

WILEY-VCH

#### Contents

- 1 Introduction
- 2 Forces and Structures
- 3 Purification of Materials, Crystal Growth and Preparation of Thin Films
- 4 Impurities and Defects
- 5 Molecular and Lattice Dynamics in Organic Molecular Crystals
- 6 Electronic Excited States, Excitons, Energy Transfer
- 7 Structure and Dynamics of Triplet States
- 8 Organic Semiconductors
- 9 Organic Crystals of High Conductivity
- **10 Organic Superconductors**
- **11 Electroluminescence and the Photovoltaic Effect**
- 12 Towards a Molecular Electronics

Statistics, Data Mining, and Machine Learning in Astronomy by Željko Ivezić, Andrew J. Connolly, Jacob T VanderPlas, and Alexander Gray

- I Introduction
  - 1 About the Book and Supporting Material
  - 2 Fast Computation on Massive Data Sets
- **II Statistical Frameworks and Exploratory Data Analysis** 
  - **3 Probability and Statistical Distributions**
  - **4 Classical Statistical Inference**
  - **5 Bayesian Statistical Inference**
- **III Data Mining and Machine Learning** 
  - 6 Searching for Structure in Point Data
  - 7 Dimensionality and Its Reduction
  - 8 Regression and Model Fitting
  - 9 Classification
  - **10 Time Series Analysis**
- **IV** Appendices
  - A An Introduction to Scientific Computing with Python
  - **B AstroML: Machine Learning for Astronomy**
  - **C** Astronomical Flux Measurements and Magnitudes
  - D SQL Query for Downloading SDSS Data
  - **E** Approximating the Fourier Transform with the FFT

Aerosols Handbook: Measurement, Dosimetry, and Health Effects Lev S. Ruzer, Naomi H. Harley

- Chapter 1 Medical and Pharmaceutical Aerosols
- Chapter 2 Breathing Zone Exposure Assessment
- Chapter 3 Mechanisms of Particle Deposition
- Chapter 4 Aerosol Dose
- Chapter 5 Modeling Deposition of Inhaled Particles
- **Chapter 6** Aerosol Chemistry and Physics
- **Chapter 7** Chemical Analyses of Particle Filter Deposits
- Chapter 8 Health Effects of Ambient Ultrafine Particles
- **Chapter 9 Nanoparticle Cell Penetration**
- Chapter 10 High Aspect Ratio Nanomaterials: Characterization and Toxicology
- Chapter 11 Research and Development of a New Safe Form of Drugs
- **Chapter 12 Bioaerosols**
- Chapter 13 Aerosols, Global Climate, and the Human Health Co-Benefits of Climate Change Mitigation
- **Chapter 14 Health Effects of Metals in Ambient Air Particular Matter**
- **Chapter 15 Radioactive Aerosols**
- Chapter 16 Unattached Fraction of Radon Progeny as an Experimental Tool in the Assessment of the Risk of Nanoparticles
- Chapter 17 Filtration and Sampling of Aerosols by Fibrous Filters
- **Chapter 18 Radioactive Aerosols of Chernobyl Accident**
- Chapter 19 Classical Nucleation Theory: Account of Dependence of the Surface Tension on Curvature and Translation-Rotation Correction Factor
- **Chapter 20 Radioactive Aerosol Standards**
- Chapter 21 Radon and Thoron in the Environment: Concentrations and Lung Cancer Risk
- Chapter 22 Risk from Inhalation of the Long-Lived Radionuclides Uranium, Thorium, and Fallout Plutonium in the Atmosphere
- Chapter 23 Health Effects of Aerosols: Mechanisms and Epidemiology

#### A catalog of special plane curves

#### Contents

- **1. Properties of curves**
- 2. Types of Derived Curves
- **3. Conics and Polinomials**
- 4. Cubic Curves
- 5. Quartic Curves
- 6. Algebraic Curves of High Degree
- 7. Transcendental Curves

#### **Concepts of Elementary Particle Physics Michael E. Peskin**

- I Preliminaries and Tools
- 1 Introduction
- 2 Symmetries of Space-Time
- **3** Relativistic Wave Equations
- 4 The Hydrogen Atom and Positronium
- 5 The Quark Model
- **6** Detectors of Elementary Particles
- 7 Tools for Calculation
- **II The Strong Interaction**
- 8 Electron-Positron Annihilation
- 9 Deep Inelastic Electron Scattering
- 10 The Gluon
- **11 Quantum Chromodynamics**
- **12 Partons and Jets**
- 13 QCD at Hadron Colliders
- **14 Chiral Symmetry**
- **III The Weak Interaction**
- 15 The Current-Current Model of the Weak Interaction
- 16 Gauge Theories with Spontaneous Symmetry Breaking
- 17 The W and Z Bosons
- 18 Quark Mixing Angles and Weak Decays
- 19 CP Violation
- 20 Neutrino Masses and Mixings
- 21 The Higgs Boson

Functional Supramolecular Architectures, 2 Volume Set: For Organic Electronics and Nanotechnology

Editor(s): Paolo Samorì and Franco Cacialli

#### Contents

Vol. 1

Part One Modeling and Theory

- 1 Charge Transport in Organic Semiconductors: A Multiscale Modeling
- 2 Monte Carlo Studies of Phase Transitions and Cooperative Motion in Langmuir Monolayers with Internal Dipoles
- 3 Molecules on Gold Surfaces: What They Do and How They Go Around to Do It
- Part Two Supramolecular Synthetic Chemistry
- 4 Conjugated Polymer Sensors: Design, Principles, and Biological Applications
- **5 Chromophoric Polyisocyanide Materials**
- 6 Functional Polyphenylenes for Supramolecular Ordering and Application in Organic Electronics
- 7 Molecular Tectonics: Design of Hybrid Networks and Crystals Based on Charge-Assisted Hydrogen Bonds
- 8 Synthesis and Design of  $\pi$ -Conjugated Organic Architectures Doped with Heteroatoms Simon Kervyn Claudia Aurisicchio Davide Bonifazi

Part Three Nanopatterning and Processing

9 Functionalization and Assembling of Inorganic Nanocontainers for Optical and Biomedical Applications 10 Soft Lithography for Patterning Self-Assembling Systems

- 11 Colloidal Self-Assembly of Semiconducting Polymer Nanospheres: A Novel Route to Functional Architectures for Organic Electronic Devices
- 12 Photolithographic Patterning of Organic Electronic Materials
- Part Four Scanning Probe Microscopies
- 13 Toward Supramolecular Engineering of Functional Nanomaterials: Preprogramming Multicomponent 2D Self-Assembly at Solid–Liquid Interfaces
- 14 STM Characterization of Supramolecular Materials with Potential for Organic Electronics and Nanotechnology
- 15 Scanning Probe Microscopy Insights into Supramolecular π-Conjugated Nanostructures for Optoelectronic Devices
- 16 Single-Molecule Organic Electronics: Toward Functional Structures

#### Vol. 2

**Part Five Electronic and Optical Properties** 

- 17 Charge Transfer Excitons in Supramolecular Semiconductor Nanostructures
- 18 Optical Properties and Electronic States in Anisotropic Conjugated Polymers: Intra- and Interchain Effects
- 19 Nanoscale Shape of Conjugated Polymer Chains Revealed by Single-Molecule Spectroscopy
- 20 Electronic Structure Engineering Through Intramolecular Polar Bonds

**Part Six Field-Effect Transistors** 

- 21 Crystal Structure Performance Relationship in OFETs
- 22 Bioactive Supramolecular Architectures in Electronic Sensing Devices
- 23 Field-Effect Devices Based on Organic Semiconductor Heterojunctions

24 Functional Semiconducting Blends

Part Seven Solar Cells

- 25 Hybrid Organic–Inorganic Photovoltaic Diodes: Photoaction at the Heterojunction and Charge Collection Through Mesostructured Composites
- 26 Nanostructured Hybrid Solar Cells
- 27 Determination and Control of Microstructure in Organic Photovoltaic Devices
- 28 Morphology and Photovoltaic Properties of Polymer–Polymer Blends

Part Eight LEDs/LECs

29The Light-Emitting Electrochemical Cell: Utilizing Ions for Self-Assembly and Improved Device Operation 30 Optical and Electroluminescent Properties of Conjugated Polyrotaxanes
