

# **Boletín de Adquisiciones Noviembre 2023 Parte 1**

## A Mathematical Journey Through Differential Equations of Physics

Max Lein

### *A Mathematical Journey Through Differential Equations of Physics*

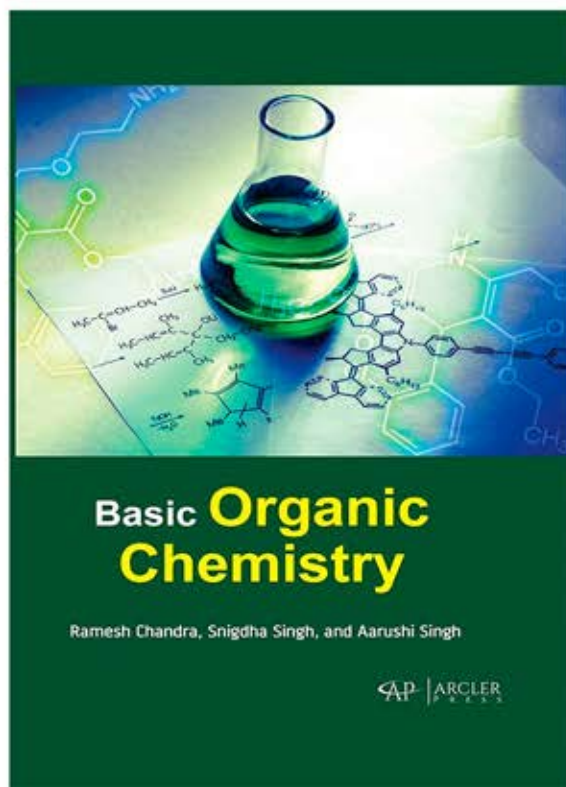

#### Contents

- 1 Introduction
- 2 Ordinary Differential Equations
- 3 The Hamiltonian Formalism of Classical Mechanics
- 4 Banach & Hilbert Spaces
- 5 Linear Operators
- 6 The Fourier Transform
- 7 Schwartz Functions & Tempered Distributions
- 8 Green's Functions
- 9 Quantum Mechanics
- 10 Variational Calculus

## Basic Organic Chemistry

Ramesh Chandra, Snigdha Singh, and Aarushi Singh

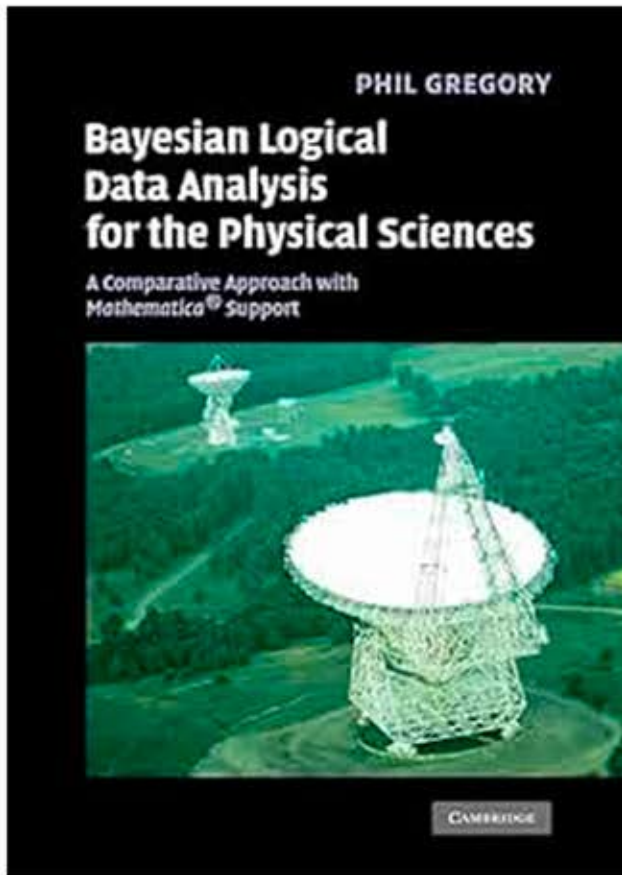

#### Table of Contents

- Chapter 1 Introduction to Chemistry and Organic Chemistry
- Chapter 2 Organic Molecules and Functional Groups
- Chapter 3 Nomenclature of Organic Molecules
- Chapter 4 Acids And Bases
- Chapter 5 Understanding Organic Reactions
- Chapter 6 Stereochemistry
- Chapter 7 Amino Acids And Proteins
- Chapter 8 Carbohydrates
- Chapter 9 Alcohols And Ethers
- Chapter 10 Spectroscopy

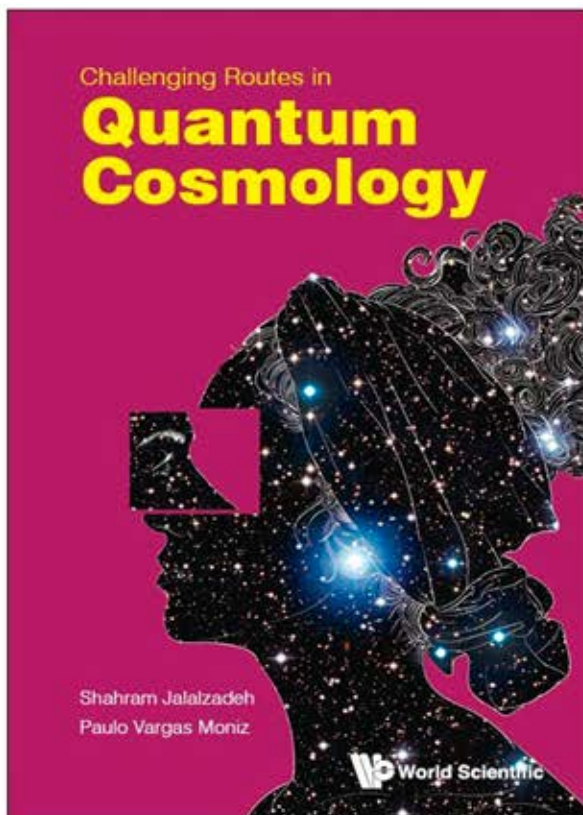

**Bayesian Logical Data Analysis for the Physical Sciences:  
A Comparative Approach with Mathematica® Support**  
Phil Gregory

**Contents**

- 1 Role of probability theory in science
- 2 Probability theory as extended logic
- 3 The how-to of Bayesian inference
- 4 Assigning probabilities
- 5 Frequentist statistical inference
- 6 What is a statistic?
- 7 Frequentist hypothesis testing
- 8 Maximum entropy probabilities
- 9 Bayesian inference with Gaussian errors
- 10 Linear model fitting (Gaussian errors)
- 11 Nonlinear model fitting
- 12 Markov chain Monte Carlo
- 13 Bayesian revolution in spectral analysis
- 14 Bayesian inference with Poisson sampling

**Challenging Routes in Quantum Cosmology**  
Shahram Jalalzadeh and Paulo Vargas Moniz

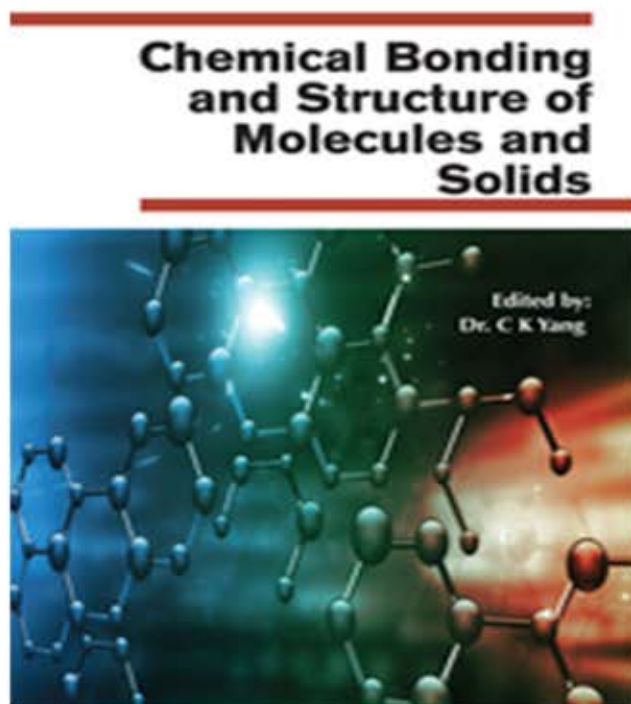

**Contents**

**A Chart**

1. Introduction
2. A Readers' Digest

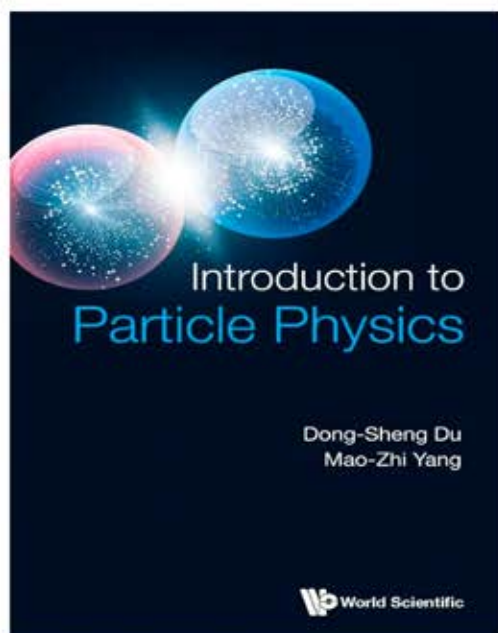

**Settings**

3. Foliation of Space-Time and the Geometry of Closed 3-Manifolds
4. Hamiltonian Formulation of General Relativity
5. Minisuperspace Quantization and the Time Problem
- Challenges**
6. Solutions: Multiplicity and Degeneracy
7. Fractional Quantum Cosmology
8. Quantum Chaos and Quantum Cosmology
9. Boundary Conditions from Algebraic Criteria
10. Quantum Groups and Quantum Cosmology

## **Table of Contents**

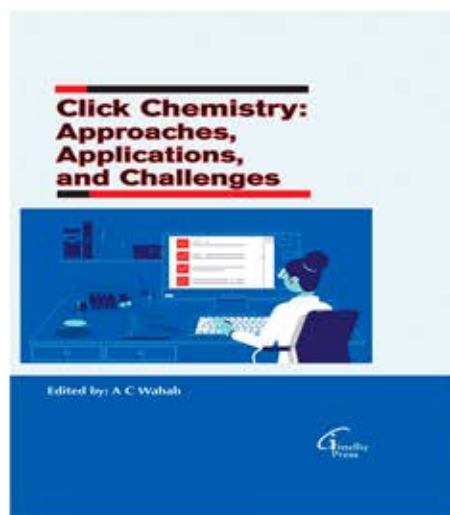

- Chapter 1 Atomic Charges and Chemical Bonding in Y-Ga Compounds**
- Chapter 2 Reflections on a Three-Year-Long Teacher-Centered, Participatory Action Research Experience on Teaching Chemical Bonding in a Swiss Vocational School**
- Chapter 3 Bonding Characteristics of TiC and TiN**
- Chapter 4 High-Pressure Synthesis and Chemical Bonding of Barium Trisilicide  $\text{BaSi}_3$**
- Chapter 5 Synthesis of a Polyimide Prous Porphyrin Polymer for Selective  $\text{CO}_2$  Capture**
- Chapter 6 Research on Interlayer Alloys for Transient Liquid Phase Diffusion Bonding of Single Crystal Nickel Base Superalloy DD6**
- Chapter 7 Density Functional Study of Electronic, Magnetic and Chemical Bonding Properties of Spinel  $\text{CdCr}_2\text{O}_4$**
- Chapter 8 Bonding of TRIP-Steel/ $\text{Al}_2\text{O}_3$ -(3Y)-TZP Composites and (3Y)-TZP Ceramic by a Spark Plasma Sintering (SPS) Apparatus**
- Chapter 9 Quantum Chemical Characterization of Hydrogen Bonding Sites in Three 4-(4-Halo-Phenyl)-6-(Furan-2-yl) Pyrimidin-2-Amine Derivatives**
- Chapter 10 Synthesis, Characterization, and Physicochemical Studies of Mixed Ligand Complexes of Inner Transition Metals with Lansoprazole and Cytosine**
- Chapter 11 The Crystal Orbital Hamilton Population (COHP) Method as a Tool to Visualize Chemical Bonding in Intermetallic Compounds**
- Chapter 12 Synthesis, Crystal Structure, and Chemical-Bonding Analysis of  $\text{BaZn}(\text{NCN})_2$**
- Chapter 13 Protein Structure Validation and Refinement Using Amide Proton Chemical Shifts Derived from Quantum Mechanics**

## **Contents**

- Chapter 1. Overview**
- Chapter 2. Symmetry and Conservation Law**
- Chapter 3. The Classification and Properties of Particles: Lepton and Hadrons**
- Chapter 4. Isospin and G Parity**
- Chapter 5. Quark Model of Hadrons**
- Chapter 6. Electromagnetic Interaction**
- Chapter 7. Weak Interactions**
- Chapter 8. Gauge Theory of Electroweak Unification**
- Chapter 9. Theory of Strong Interaction: QCD**
- Chapter 10 Neutrino Oscillation**
- Chapter 11 Beyond Standard Model**
- Chapter 12 Particle Physics and Cosmology**
- Chapter 13 Epilogue**

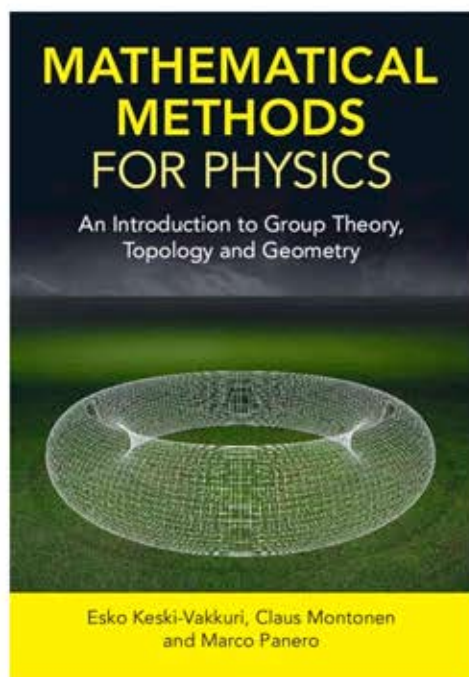

## **Click Chemistry: Approaches, Applications and Challenges** **Edited by: A C Wahab**

## **Table of Contents**

- Chapter 1 Photochemical Chain Reactions in Amorphous Solids**
- Chapter 2 Reduction on Nitrogen Compounds in Oceanic Basement and Its Implications for HCN Formation And Abiotic Organic Synthesis**
- Chapter 3 Sequential and Iterative Pd-Catalyzed Cross-Coupling Reactions in Organic Synthesis**
- Chapter 4 Italian Chemists' Contributions to Named Reactions in Organic Synthesis: An Historical Perspective**
- Chapter 5 Solid-Phase Organic Synthesis and Catalysis: Some Recent Strategies Using Alumina, Silica, and Polyionic Resins**
- Chapter 6 Sustainable Utility of Magnetically Recyclable Nano-Catalysts in Water: Applications in Organic Synthesis**
- Chapter 7 Engineering and applications of Fungal Laccases for Organic Synthesis**
- Chapter 8 Earthworm is a Versatile and Sustainable Biocatalyst for Organic Synthesis**

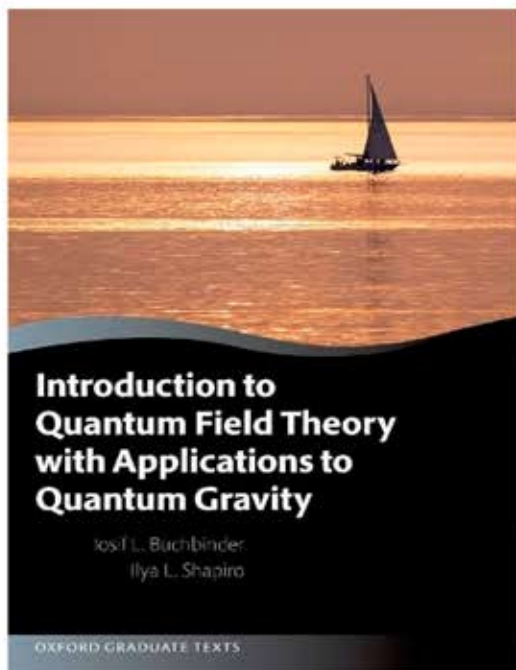

**Mathematical Methods for Physics : An Introduction to Group Theory, Topology and Geometry**  
Esko Keski-Vakkuri, Claus Montonen, and Marco Panero

**Contents**

- 1 Introduction**
- 2 Group Theory**
- 3 Representation Theory of Groups**
- 4 Differentiable Manifolds**
- 5 Riemannian Geometry**
- 6 Semisimple Lie Algebras and their Unitary Representations**

**Introduction to Quantum Field Theory with Applications to Quantum Gravity**  
Joseph Buchbinder, and Ilya Shapiro

**Contents**

**PART I INTRODUCTION TO QUANTUM FIELD THEORY**

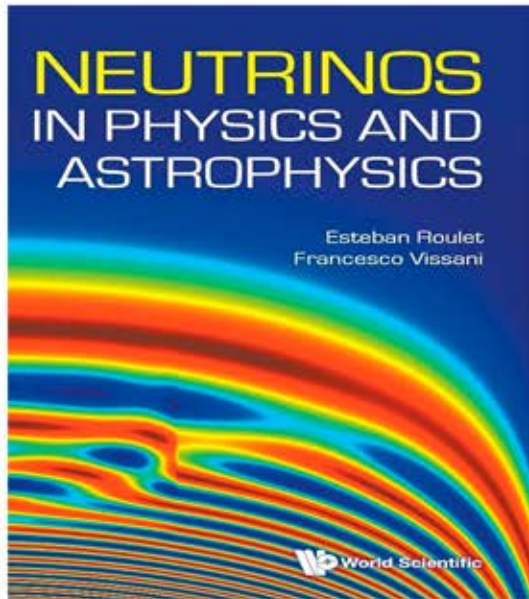

- 1. Introduction**
- 2. Relativistic Symmetry**
- 3. Lagrange formalism in field theory**
- 4. Field Models**
- 5. Canonical Quantization of Free Fields**
- 6. Scattering Matrix and Green Functions**
- 7. Functional Integrals**
- 8. Perturbation Theory**
- 9. Renormalization**
- 10. Quantum Gauge Theories**

**PART II SEMICLASSICAL AND QUANTUM GRAVITY MODELS**

- 11. Brief Review of General Relativity.**
- 12. Classical fields in curved spacetime**
- 13. Quantum fields in curved spacetime: renormalization**
- 14. One-loop divergences**
- 15. Renormalization group in curved space**
- 16. Non-local form factors in flat and curved spacetime**
- 17. Conformal anomaly and anomaly-induced action**
- 18. General Notions of Perturbative Quantum Gravity**
- 19. Massive ghosts in higher derivative models**
- 20. One-loop renormalization in quantum gravity**
- 21. Renormalization group in perturbative quantum gravity**
- 22. Induced gravity approach**
- 23. Final remarks on Part**

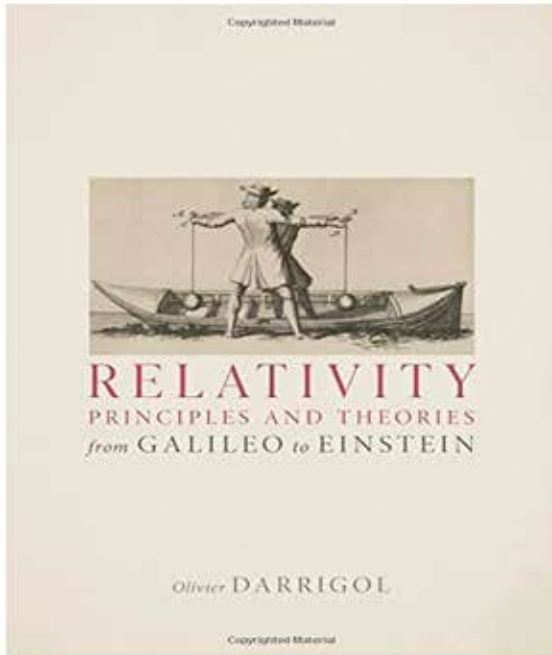

**Neutrinos in Physics and Astrophysics**  
**Esteban Roulet and Francesco Vissani**

**Contents**

- 1 The Neutrino Story**
- 2 Neutrino Interactions and Detection Techniques**
- 3 Neutrino Masses and Mixings**
- 4 Neutrino Oscillations**
- 5 Solar Neutrinos**
- 6 Geoneutrinos**
- 7 Supernova Neutrinos**
- 8 Atmospheric Neutrinos**
- 9 High-energy Astrophysical Neutrinos**
- 10 Neutrinos in Cosmology**

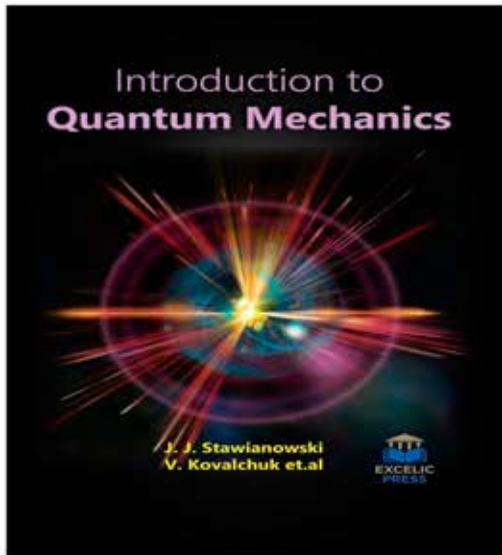

**Relativity Principles and Theories from Galileo to Einstein**  
**Olivier Darrigol**

**Contents**

- 1. Rethinking motion in the seventeenth century**
- 2. Deriving Newton's second law from relativity principles**
- 3. The space-time-inertia tangle**
- 4. The optics of moving bodies**
- 5. The electrodynamics of moving bodies**
- 6. Poincaré's relativity theory**
- 7. The relativity theory of Einstein, Minkowski, and Laue**
- 8. From Riemann to Ricci**
- 9. Mostly Einstein: To general relativity**
- 10. Mesh and measure in early general relativity**
- 11. Epilogue**

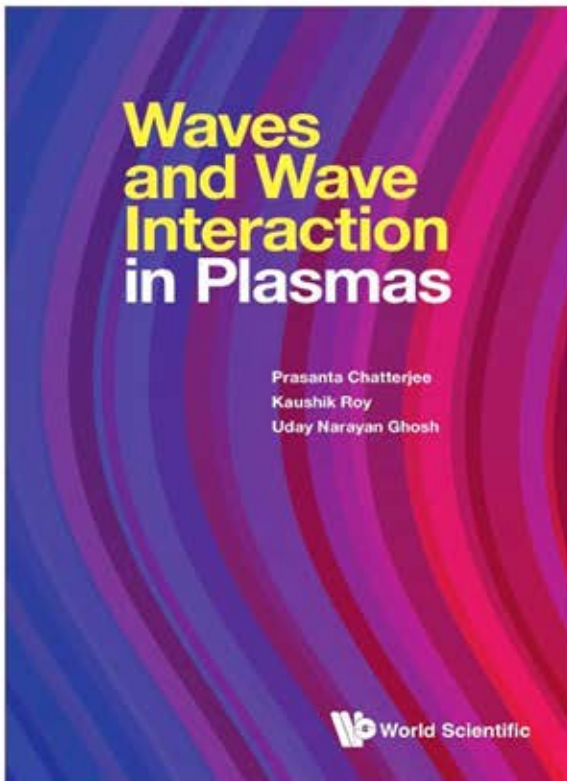

**Introduction to Quantum Mechanics**  
**J.J. Stawianowski ; V. Kovalchuk et al.**

**Table of Contents**

- Chapter 1 Classical or Quantum? What is Reality?**
- Chapter 2 Why Interpret Quantum Physics?**
- Chapter 3 Quantum Mechanics as a Reactive Probabilistic System**
- Chapter 4 Dynamical Properties of the Superposition of Two Finite Trio Coherent States**
- Chapter 5 The Statistical Origins of Quantum Mechanics**
- Chapter 6 Non Commutative Quantum Mechanics in Time-Dependent Backgrounds**
- Chapter 7 Quantum Mechanics and Special Relativity: The Origin of Momentum Operator**
- Chapter 8 The Stable Wave Packet in the Foundations of Quantum Mechanics**
- Chapter 9 Nonrelativistic Quantum Mechanics with Fundamental Environment**
- Chapter 10 Recent Progresses in Ab Initio Electronic Structure Calculation toward Understanding of Functional Mechanisms of Biological Macromolecular Systems**

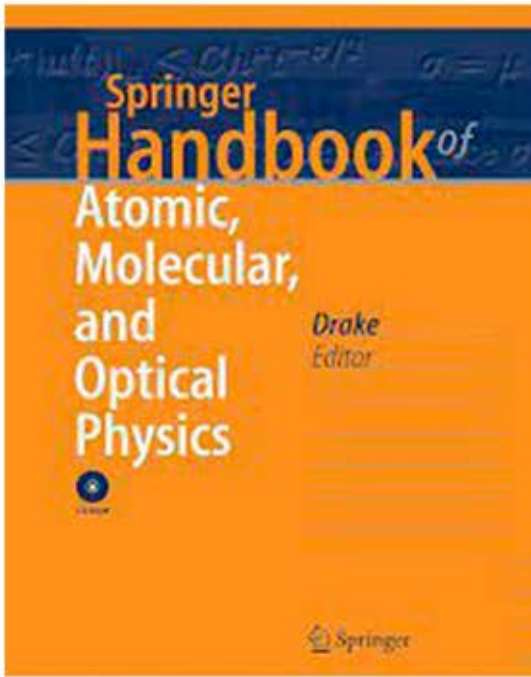

**Waves and Wave Interaction in Plasmas**  
**Prasanta Chatterjee , Kaushik Roy, and Uday Narayan Ghosh**

**Contents**

- Chapter 1. Introduction to Plasmas**
- Chapter 2. Introduction to Waves in Plasma**
- Chapter 3. Solution of Nonlinear Wave Equations**
- Chapter 4. RPT and Some Evolution Equations**
- Chapter 5. Dressed Soliton and Envelope Soliton**
- Chapter 6. Evolution Equations in Nonplanar Geometry**
- Chapter 7. Collision of Solitons**
- Chapter 8. Sagdeev's Pseudopotential Approach**
- Chapter 9. Conclusion and Future Scopes**

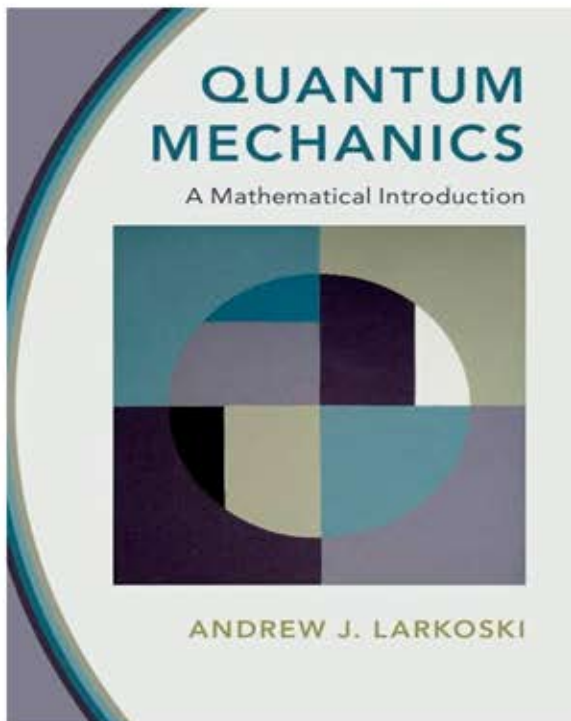

This indispensable resource is a single volume to bridge the many interrelated disciplines of atomic, molecular, and optical (AMO) physics.

Along with a summary of key ideas, techniques, and results, many chapters offer you diagrams of apparatus, graphs, and tables of data.

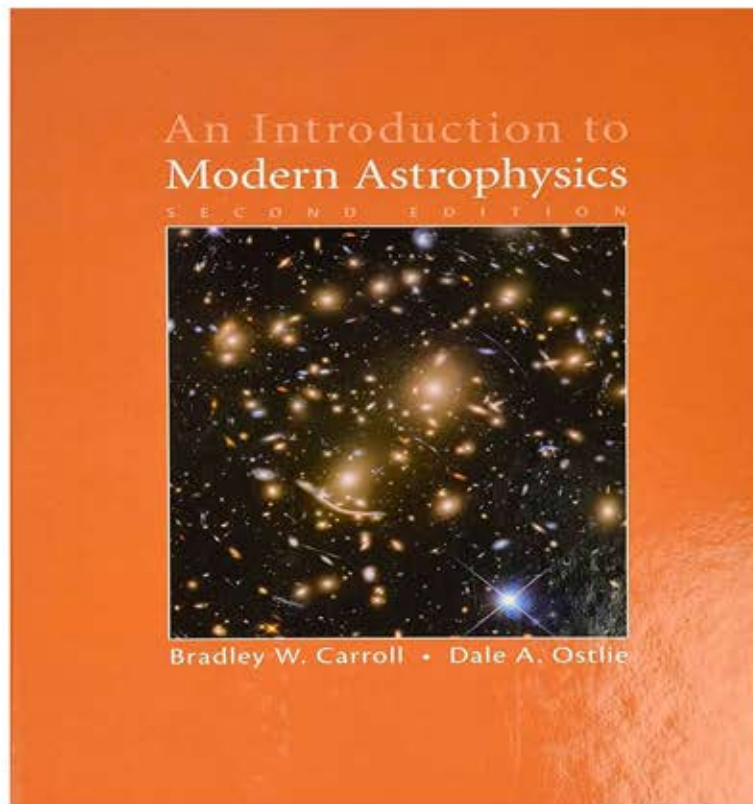

From atomic spectroscopy to applications in comets, one finds contributions from over 100 authors, all leaders in their respective disciplines.

**Quantum Mechanics: A Mathematical Introduction**  
Andrew J. Larkoski

**Contents**

- 1 Introduction
  - 2 Linear Algebra
  - 3 Hilbert Space
  - 4 Axioms of Quantum Mechanics and their Consequences
  - 5 Quantum Mechanical Example: The Infinite Square Well
  - 6 Quantum Mechanical Example: The Harmonic Oscillator
  - 7 Quantum Mechanical Example: The Free Particle
  - 8 Rotations in Three Dimensions
  - 9 The Hydrogen Atom
  - 10 Approximation Techniques
  - 11 The Path Integral
  - 12 The Density Matrix
  - 13 Why Quantum Mechanics?
- Appendices**
- A - Mathematics Review
  - B - Poisson Brackets in Classical Mechanics
  - C - Further Reading

## **Contents**

### **I THE TOOLS OF ASTRONOMY**

- 1 - The Celestial Sphere**
- 2 - Celestial Mechanics**
- 3 - The Continuous Spectrum of Light**
- 4 - The Theory of Special Relativity**
- 5 - The Interaction of Light and Matter**
- 6 - Telescopes**

### **II THE NATURE OF STARS**

- 7 - Binary Systems and Stellar Parameters**
- 8 - The Classification of Stellar Spectra**
- 9 - Stellar Atmospheres**
- 10 - The Interiors of Stars**
- 11 - The Sun**
- 12 - The Interstellar Medium and Star Formation**
- 13 - Main Sequence and Post-Main-Sequence Stellar Evolution**
- 14 - Stellar Pulsation**
- 15 - The Fate of Massive Stars**
- 16 - The Degenerate Remnants of Stars**
- 17 - General Relativity and Black Holes**
- 18 - Close Binary Star Systems**

### **III THE SOLAR SYSTEM**

- 19 - Physical Processes in the Solar System**
- 20 - The Terrestrial Planets**
- 21 - The Realms of the Giant Planets**
- 22 - Minor Bodies of the Solar System**
- 23 - Formation of Planetary Systems**

#### **IV GALAXIES AND THE UNIVERSE**

**24 - The Milky Way Galaxy**

**25 - The Nature of Galaxies**

**26 - Galactic Evolution**

**27 - The Structure of the Universe**

**28 - Active Galaxies**

**29 - Cosmology**

**30 - The Early Universe**

**A – Astronomical and Physical Constants**

**B – Unit Conversions**

**C - Solar System Data**

**D - The Constellations**

**E - The Brightest Stars**

**F - The Nearest Stars**

**G - Stellar Data**

**H - The Messier Catalog**

**I - Constants, A Programming Module**

**J - Orbit, A Planetary Orbit Code**

**K - TwoStars, A Binary Star Code**

**L - StatStar, A Stellar Structure Code**

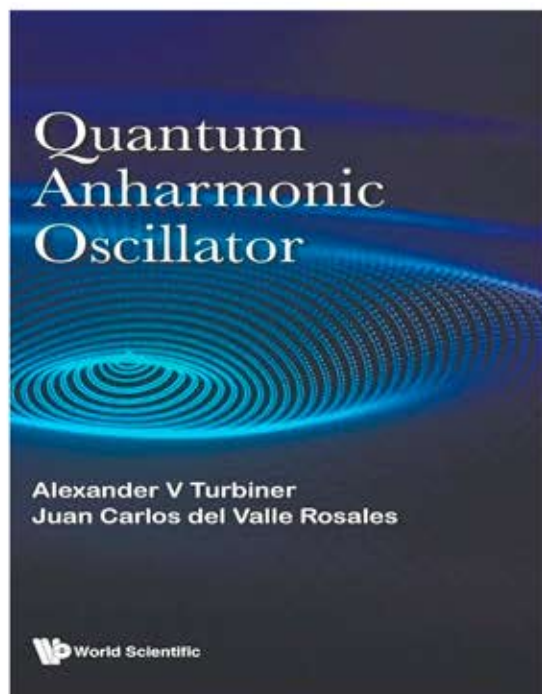

**M - Galaxy, A Tidal Interaction Code**

**N - WMAP Data**

**Suggested Reading**

#### **Quantum Anharmonic Oscillator**

**Alexander V Turbiner and Juan Carlos del Valle Rosales**

#### **Contents**

##### **Part I: The One-Dimensional Anharmonic Oscillator**

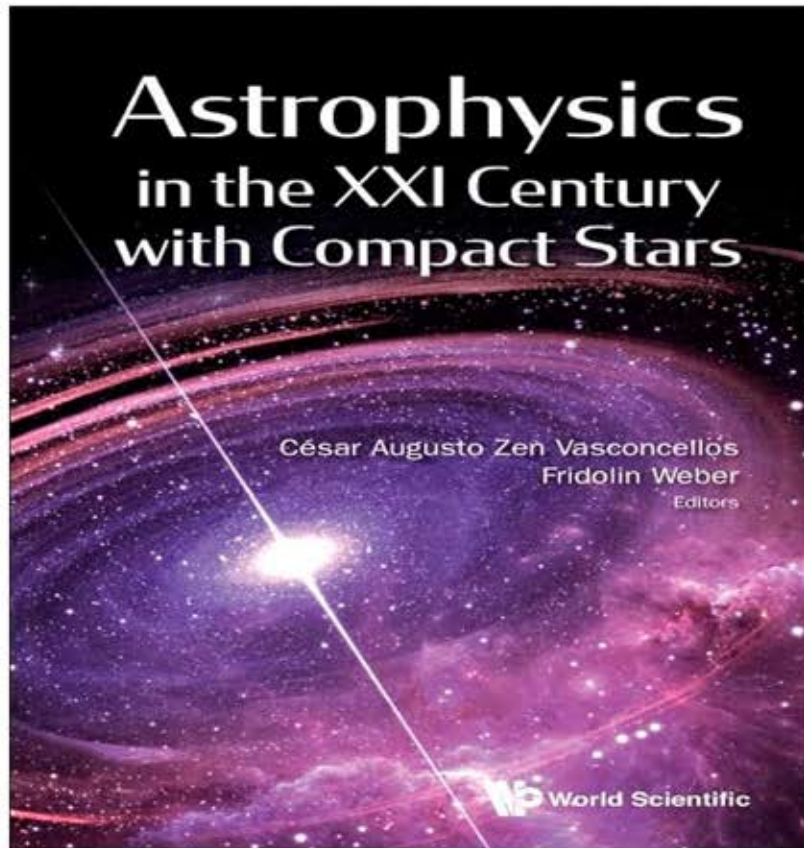

- 1 Generalities**
- 2 Riccati-Bloch Equation, Weak/Strong Coupling Regime**
- 3 Generalized Bloch Equation, Semiclassical Expansion**
- 4 Matching Perturbation Theory and Semiclassical Expansion**
- 5 Quartic Anharmonic Oscillator**
- 6 Sextic Anharmonic Oscillator**

##### **Part II: The Radial Anharmonic Oscillator**

- 7 Spherical Symmetrical Potentials: Generalities**
- 8 Radial AHO: Matching Perturbation Theory and Semiclassical Expansion**
- 9 Radial Cubic Anharmonic Oscillator**
- 10 Radial Quartic Anharmonic Oscillator**
- 11 Radial Sextic Anharmonic Oscillator**

**Astrophysics in the XXI Century with Compact Stars**  
**Edited By: César Augusto Zen Vasconcellos and Fridolin Weber**

## **Contents**

- 1 Birth Events, Masses and the Maximum Mass of Compact Stars**
- 2 The Micro-physics of the Quark-nova: Recent Developments**
- 3 Astrophysics of Super-dense Matter: A Strangeon Conjecture**
- 4 Fast-spinning and Highly Magnetized White Dwarfs**
- 5 Hyperonization in Compact Stars**
- 6 Learning from the Frequency Content of Continuous Gravitational Wave Signals**
- 7 Insights Into the Physics of Neutron Star Interiors from Pulsar Glitches**
- 8 Effects of a Strong Phase Transition on Supernova Explosions, Compact Stars and Their Mergers**
