

**Boletín de Adquisiciones
Octubre 2021**

Elementary particle physics: An intuitive introduction
Andrew J. Larkoski

Contents

1. Introduction
 2. Special relativity
 3. A little group theory
 4. Fermi's golden rule and Feynman diagrams
 5. Particle collider experiment
 6. Quantum electrodynamics in e+e- collisions
 7. Quarks and gluons
 8. Quantum chromodynamics
 9. Parton evolution and jets
 10. Parity violation
 11. The mass scales of the weak force
 12. Consequences of weak interactions
 13. The Higgs boson
 14. Particle physics at the frontier
- Appendix A. Useful identities
Appendix B. Review of quantum mechanics
Appendix C. Particle physics jargon glossary
Appendix D. Bibliography.

Foundations of Classical Mechanics

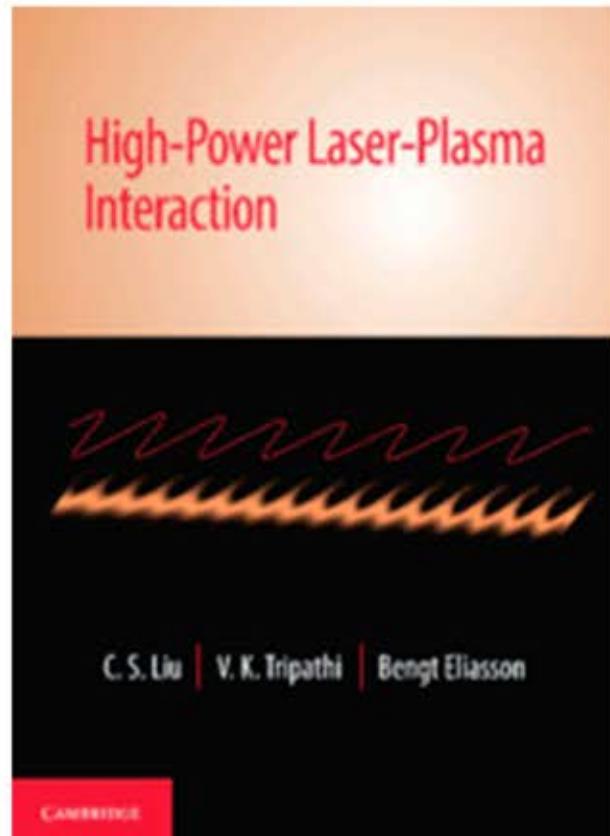

P.C. Deshmukh

Contents

Introduction

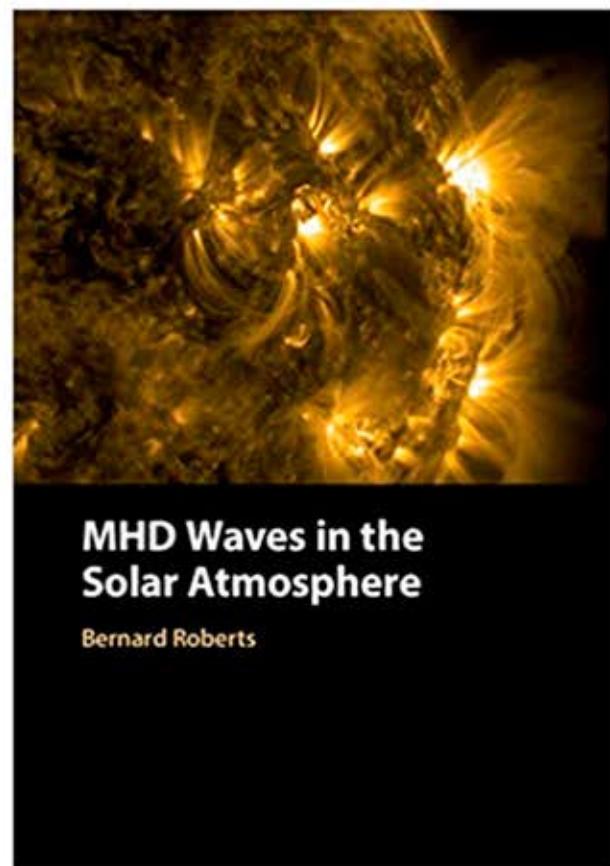

- 1 Laws of Mechanics and Symmetry Principles
- 2 Mathematical Preliminaries
- 3 Real Effects of Pseudo-forces: Description of Motion in Accelerated Frame of Reference
- 4 Small Oscillations and Wave Motion
- 5 Damped and Driven Oscillations; Resonances
- 6 The Variational Principle
- 7 Angular Momentum and Rigid Body Dynamics
- 8 The Gravitational Interaction in Newtonian Mechanics
- 9 Complex Behavior of Simple System
- 10 Gradient Operator, Methods of Fluid Mechanics, and Electrodynamics
- 11 Rudiments of Fluid Mechanics
- 12 Basic Principles of Electrodynamics
- 13 Introduction to the Special Theory of Relativity
- 14 A Glimpse of the General Theory of Relativity

High-Power Laser-Plasma Interaction
C. S. Liu , V. K. Tripathi and Bengt Eliasson

Contents

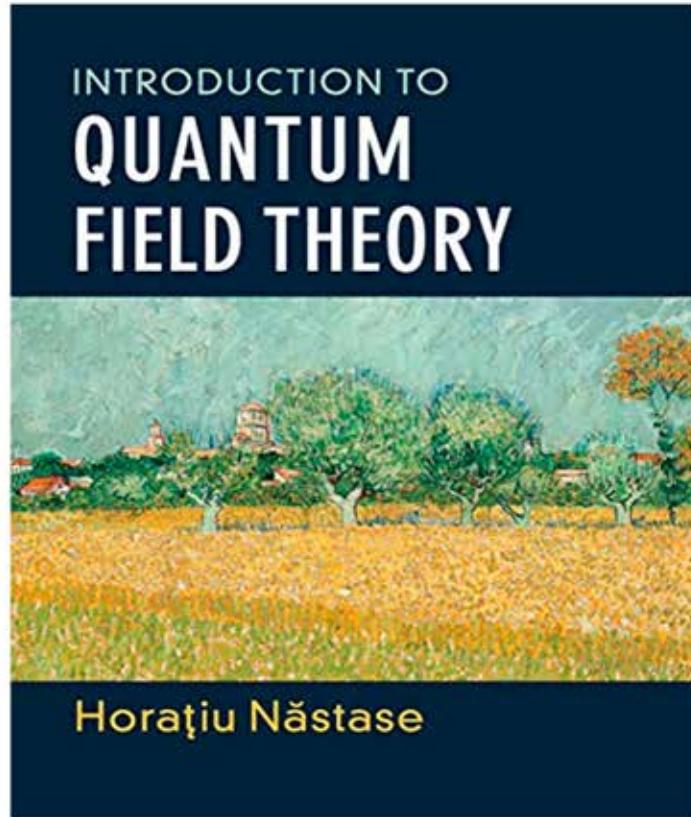

- 1 Introduction**
- 2 Linear Waves**
- 3 Resonance Absorption and Brunel Absorption**
- 4 Plasmonics Surface Plasma Waves and Their Coupling to Lasers**
- 5 Motion in a Strong Electromagnetic Wave: Ponderomotive Force and Self-Generated Magnetic Field**
- 6 Laser Electron Acceleration**
- 7 Laser Acceleration of Ions**
- 8 Coherent Radiation Emission: Free Electron Laser**
- 9 Self-focusing and Filamentation**
- 10 Parametric Instabilities**
- 11 Parametric Instabilities in Inhomogeneous Plasma**
- 12 Nonlinear Schrödinger Equation**
- 13 Vlasov and Particle-in-Cell Simulations**
- 14 Strong Electromagnetic Field Effects in Plasma**

MHD Waves in the Solar Atmosphere
Bernard Roberts

Contents

- 1. General principles**
- 2. Waves in a uniform medium**
- 3. Magnetically structured atmospheres**
- 4. Surface waves**
- 5. Magnetic slabs**
- 6. Magnetic flux tubes**
- 7. The twisted magnetic flux tube**
- 8. Connection formulas**
- 9. Gravitational effects**
- 10. Thin flux tubes: the sausage mode**
- 11. Thin flux tubes: the kink mode**
- 12. Damping**
- 13. Nonlinear aspects**
- 14. Solar applications of MHD wave theory**

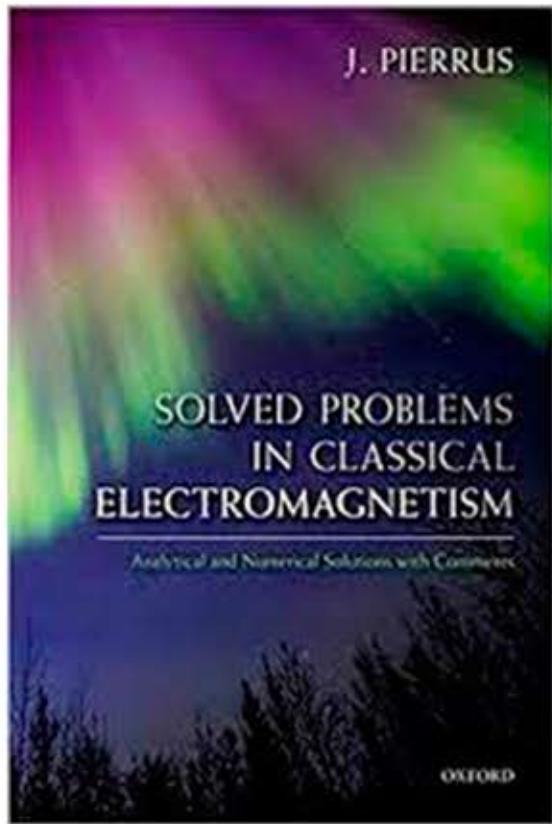

Contents

1. Review of classical field theory
2. Quantum mechanics
3. Canonical quantization of scalar fields
4. Propagators for free scalar fields
5. Interaction picture and wick theorem for $\Lambda\phi^4$ in operator formalism
6. Feynman rules for $\Lambda\phi^4$ from the operator formalism
7. The driven (forced) harmonic oscillator
8. Euclidean formulation and finite temperature field theory
9. The Feynman path integral for a scalar field
10. Wick theorem for path integrals and Feynman rules part I
11. Feynman rules in X-Space and P-Space
12. Quantization of the Dirac field and Fermionic path integral
13. Wick theorem, Gaussian integration and Feynman rules for fermions
14. Spin sums, Dirac field bilinears and C,P,T symmetries for fermions

15. Dirac quantization of constrained systems
16. Quantization of gauge fields, their path integral, and the photon propagator
17. Generating functional for connected Green's Functions and the effective action (1PI Diagrams)
18. Dyson–Schwinger equations and ward identities
19. Cross sections and the S-Matrix
20. The S-matrix and Feynman diagrams
21. The optical theorem and the cutting rules
22. Unitarity and the largest time equation
23. QED
24. Nonrelativistic processes
25. $E+E^- \rightarrow L^- L$ unpolarized cross section
26. $E+E^- \rightarrow L^- L$ polarized cross section
27. (Unpolarized) Compton scattering
28. The Helicity Spinor formalism
29. Gluon amplitudes, the Parke–Taylor formula and the BCFW construction
30. Review of path integral and operator formalism and the Feynman diagram expansion
31. One-loop determinants, vacuum energy and zeta function regularization
32. One-loop divergences for scalars
33. Regularization, definitions
34. One-loop renormalization for scalars and counterterms in dimensional regularization
35. Renormalization conditions and the renormalization group
36. One-loop renormalizability in QED
37. Physical applications of one-loop results 1. Vacuum Polarization
38. Physical applications of one-loop results 2. Anomalous magnetic moment and lamb shift
39. Two-loop example and multiloop generalization

- 40. The LSZ reduction formula**
- 41. The Coleman–Weinberg mechanism for one-loop potential**
- 42. Quantization of gauge theories I**
- 43. Quantization of gauge theories II**
- 44. One-loop renormalizability of gauge theories**
- 45. Asymptotic freedom. BRST symmetry**
- 46. Lee–Zinn–Justin identities and the structure of divergences (formal renormalization of gauge theories)**
- 47. BRST quantization**
- 48. QCD**
- 49. Parton evolution and Altarelli-Parisi equation**
- 50. The Wilson Loop and the Makeenko–Migdal Loop equation. Order parameters**
- 'T Hooft Loop**
- 51. IR divergences in QED**
- 52. IR safety and renormalization in QCD**
- General IR-factorized form of amplitudes**
- 53. Factorization and the Kinoshita–Lee–Nauenberg theorem**
- 54. Perturbative anomalies**
- 55. Anomalies in path integrals – the Fujikawa method**
- 56. Physical applications of anomalies, 'T Hooft's UV-IR anomaly matching conditions, anomaly cancellation**
- 57. The Froissart Unitarity Bound and the Heisenberg Model**
- 58. The operator product expansion, renormalization of composite operators and anomalous dimension matrices**
- 59. Manipulating loop amplitudes**
- 60. Analyzing the result for amplitudes**
- 61. Representations and symmetries for loop amplitudes**
- 62. The Wilsonian effective action, effective field theory and applications**
- 63. Kadanoff blocking and the renormalization group**
- 64. Lattice field theory**
- 65. The Higgs Mechanism**
- 66. Renormalization of spontaneously broken gauge theories I**
- 67. Renormalization of spontaneously broken gauge theories II**
- 68. Pseudo-Goldstone bosons, nonlinear sigma model and Chiral perturbation theory**
- 69. The background field method**
- 70. Finite temperature quantum field theory I**
- 71. Finite temperature quantum field theory II**
- 72. Finite temperature quantum field theory III.**

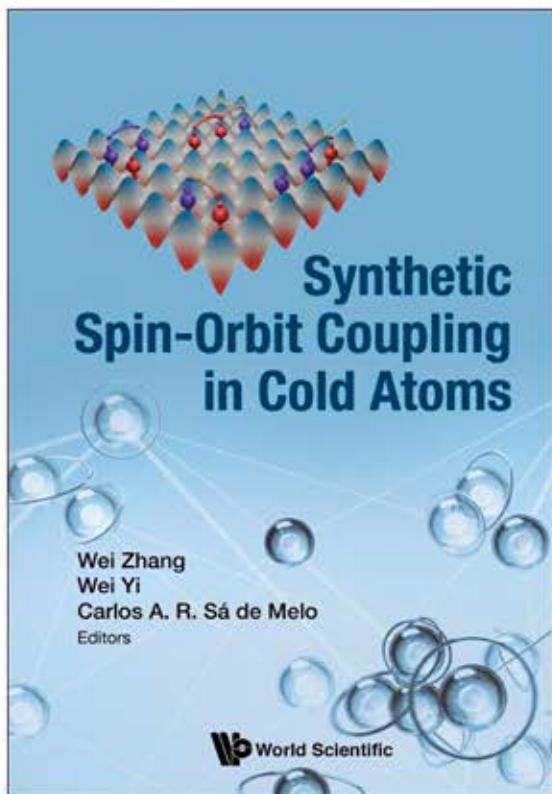

Solved Problems in Classical Electromagnetism: Analytical and Numerical Solutions with Comments

J. Pierrus

Contents

- 1 Some essential mathematics**
- 2 Static electric fields in vacuum**
- 3 The electrostatics of conductors**
- 4 Static magnetic fields in vacuum**
- 5 Quasi-static electric and magnetic fields in vacuum**
- 6 Ohm's law and electric circuits**
- 7 Electromagnetic fields and waves in vacuum**
- 8 The electromagnetic potentials**
- 9 Static electric and magnetic fields in matter**
- 10 Some applications of Maxwell's equations in matter**
- 11 Electromagnetic radiation**
- 12 Electromagnetism and special relativity**

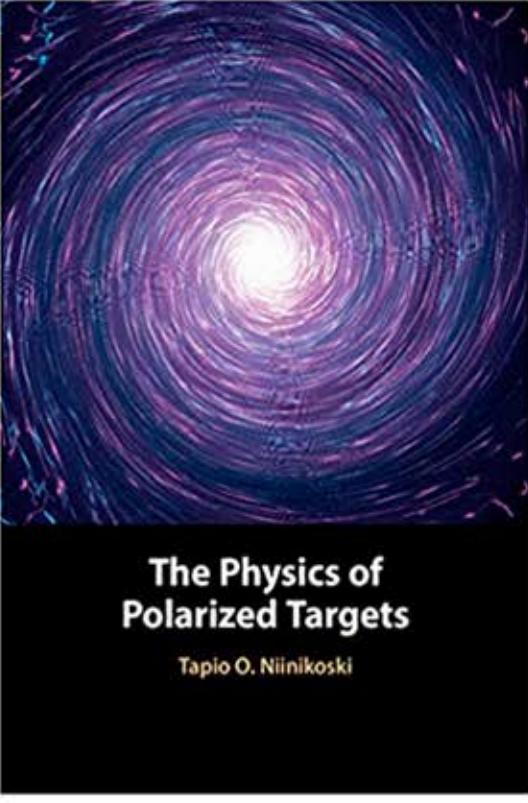

Synthetic Spin-Orbit Coupling in Cold Atoms

Edited By: Wei Zhang, Wei Yi and Carlos A R Sá Melo

Content

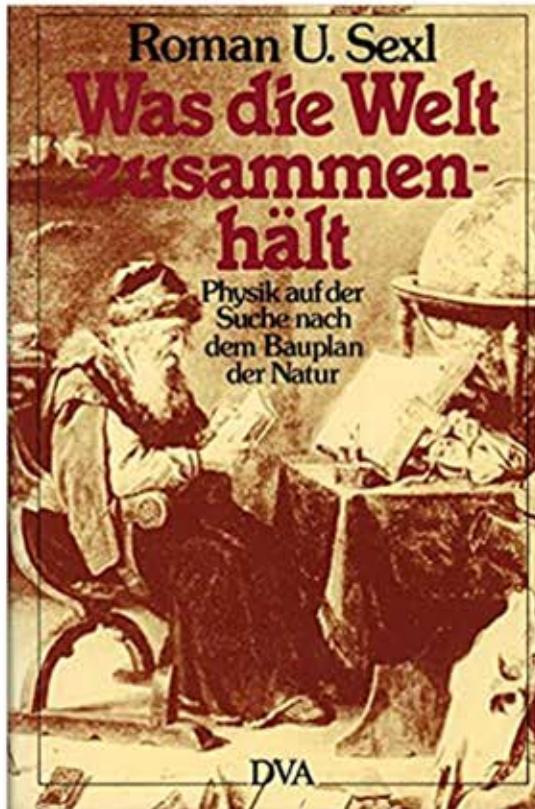

- 1 Spin-orbit Coupling and Topological Phases for Ultracold Atoms**
- 2 Quasi-low Dimensional Fermi Gases with Spin-orbit Coupling**
- 3 Rashba-spin-orbit Coupling in Interacting Fermi Gases**
- 4 Pairing Superfluidity in Spin-Orbit Coupled Ultracold Fermi Gases**
- 5 Superfluid Properties of a Spin-orbit Coupled Fermi Gas**
- 6 Spin-Orbit Coupling in Three-Component Bose Gases**
- 7 Dynamical Spin-Orbit Coupling in Cold Atoms Induced by Cavity Field**

The Physics of Polarized Targets
Tapio O. Niinikoski

Contents

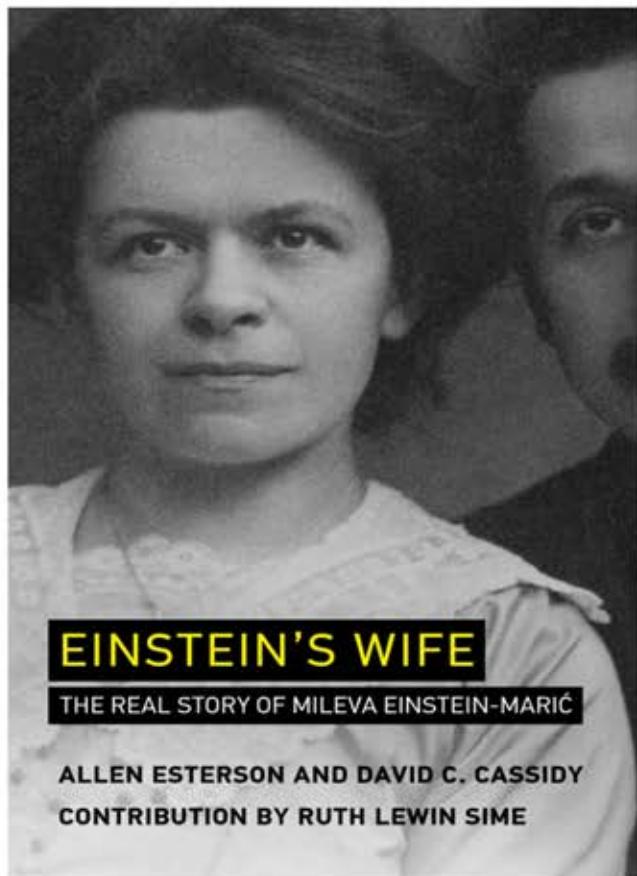

1. Introduction to spin, magnetic resonance and polarization
2. Resonance and relaxation of interacting spin systems
3. Electron paramagnetic resonance and relaxation
4. Dynamic nuclear polarization
5. Nuclear magnetic resonance and relaxation
6. NMR polarization measurement
7. Choice and preparation of polarized target materials
8. Refrigeration
9. Microwave and magnet techniques
10. Other methods of nuclear spin polarization
11. Design and optimization of experiments using polarized targets

Was die Welt zusammenhält: physik auf d. Suche nach de. Bauplan d. Natur.
Roman Sexl

Inhaltsverzeichnis

- 1 Die Weltmaschine
- 2 Felder werden Wirklichkeit
- 3 Der Weg zum Atom
- 4 Alles schon einmal dagewesen?
- 5 Das Unteilbare teilen
- 6 Der störende Beobachter
- 7 Die Suche nach dem Urstoff
- 8 Materie in Raum und Zeit
- 9 Vom Ursprung und Ende des Universums
- 10 Naturwissenschaft, Erkenntnis und Sicherheit

Einstein's Wife : The Real Story of Mileva Einstein-Marić
By Allen Esterson and David C. Cassidy

Contents

I Mileva and Albert, David C. Cassidy

1 Two trajectories

2 The Zurich polytechnic

3 An unsuccessful marriage

II Women in science, Ruth Lewin Sime

4 Women in science: struggle and success

III Examining the Mileva story, Allen Esterson

5 The story begins

6 The story emerges

7 Collaboration as students

8 Collaboration during their marriage

9 The story spreads

10 The story continues

11 The story concludes

**Solitary Waves
in Plasmas
and in
the Atmosphere**

Vladimir Petviashvili
and
Oleg Pohkotelov

R

Solitary Waves Plasms Atmosphere
V.I. Petviashvili and O.A. Pohkotelov

Contents

1. Some results from the linear theory

2. Nonlinear equations of the acoustic type

3. Nonlinear equations of the optical type

4. Diamagnetism of cyclotron plasma waves and cyclotron solitons

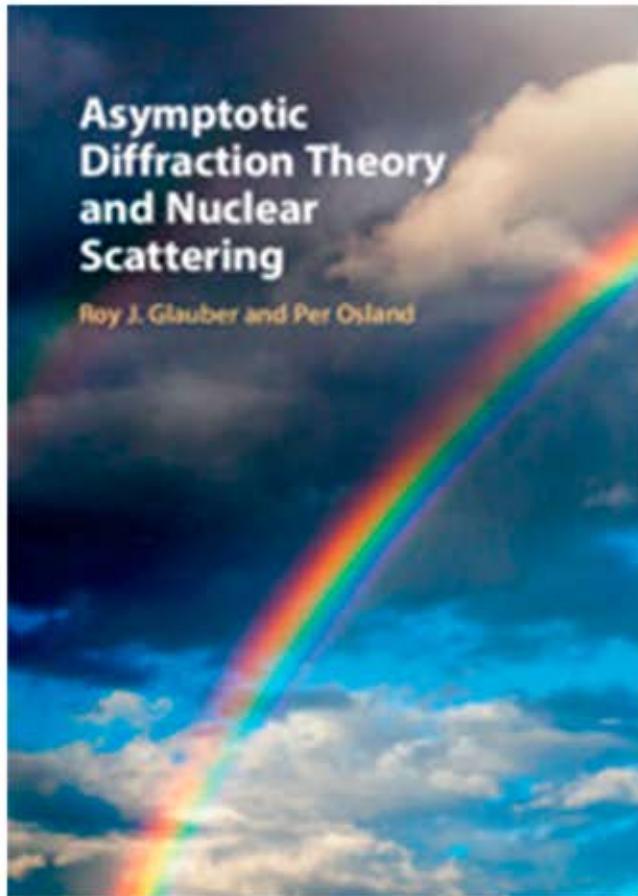

5. Solitary vortices in the atmospheres of rapidly rotating planets

6. Two-dimensional drift vortices in plasmas

7. Solitary toroidal vortices

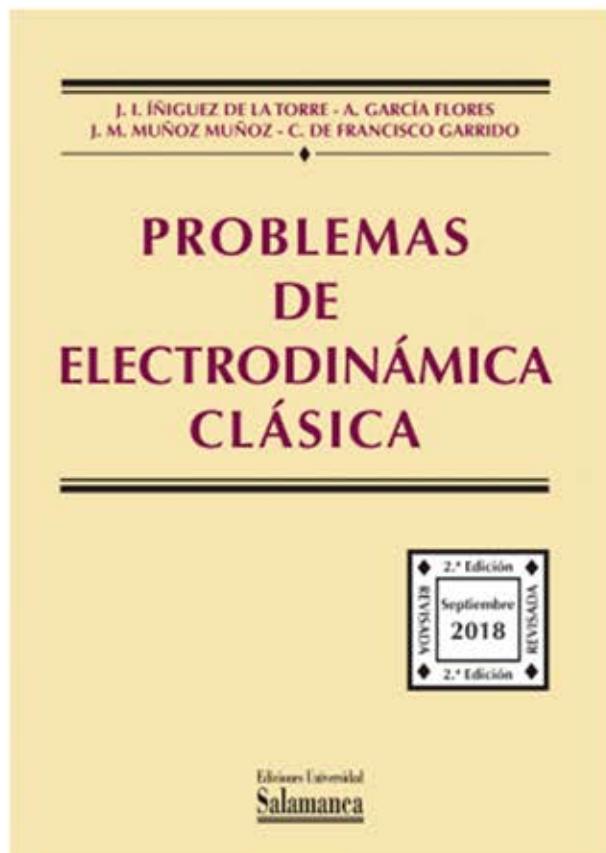

8. Conservation of helicity and the Lyapunov stability of MHD structures

Asymptotic Diffraction Theory and Nuclear Scattering
Roy J. Glauber and Per Osland

Contents

- Part I - Introduction**
- 1 Overview and Preview
 - 2 Diffraction Theory
 - 3 Asymptotic Diffraction Theory and Classical Scattering
 - 4 Two Simple Examples
 - 5 Complex Trajectories
 - 6 Scattering from Linear Structures
- Part II - Phase Shift Functions for Various Radial Falloffs**
- 7 Phase Shift Functions with Gaussian Decrease
 - 8 Phase Shift Functions with Exponential Edge
 - 9 Sharper Edges
 - 10 Phase Shift Functions with Other Analytic Properties
- Part III - Composite Phase Shift Functions**
- 11 Coulomb Scattering from Extended Charges
 - 12 Coulomb Plus Nuclear Interactions
 - 13 Two-Scale Phase Shift Functions
 - 14 Double “Fermi” Phase Shift Functions
 - 15 Different-Strength Singularities
 - 16 Summary
- Appendix A - Partial Waves and Phase Shift Function**
- Appendix B - Iteration for Stationary Points**

Problemas de electrodinámica clásica: 2.^a Edición
Autores/as: José Ignacio Íñiguez de la Torre Bayo, Ana García Flores, José María Muñoz Muñoz, Carlos de Francisco Garrido

Índice

- I. Leyes generales de electromagnetismo
- II. Electronagnetismo y relatividad
- III. Radiación electromagnética
- IV. Propagación de ondas
- V. Partículas cargadas en campos E y B
- A-I Ejercicios básicos de electromagnetismo
- A-II Complementos Matemáticos
- A-III Formulario-resumen de electrodinámica clásica

RESEARCH ON PARTICLE IMAGING DETECTORS

Editor

Georges Charpak

World Scientific

Research on particle imaging detectors
Edited by Georges Charpak

Contents

- 1. LOW ENERGY NUCLEAR PHYSICS WITH GASEOUS DETECTORS: 1950–1959**
- 2. DETECTORS WITH OPTICAL IMAGING: 1956–1992**
- 3. FILMLESS SPARK CHAMBERS: 1962–1967**
- 4. WIRE CHAMBERS AND DRIFT CHAMBERS: 1968–1994**
- 5. MULTISTEP AVALANCHE CHAMBERS: 1978–1990**
- 6. IMAGING OF VACUUM ULTRA VIOLET PHOTONS. APPLICATON TO CERENKOV AND GAMMA**
- 7. MISCELLANEOUS DETECTORS: 1962–1994**
- 8. APPLICATIONS OF DETECTORS TO BIOLOGY OR MEDICINE: 1970–1992**

Schrödinger's Mechanics

Interpretation

$\text{th} \frac{\partial}{\partial t} - \text{H} \mathbf{I}$

David B Cook

 World Scientific

Schrödinger's Mechanics : Interpretation

David B Cook

Contents

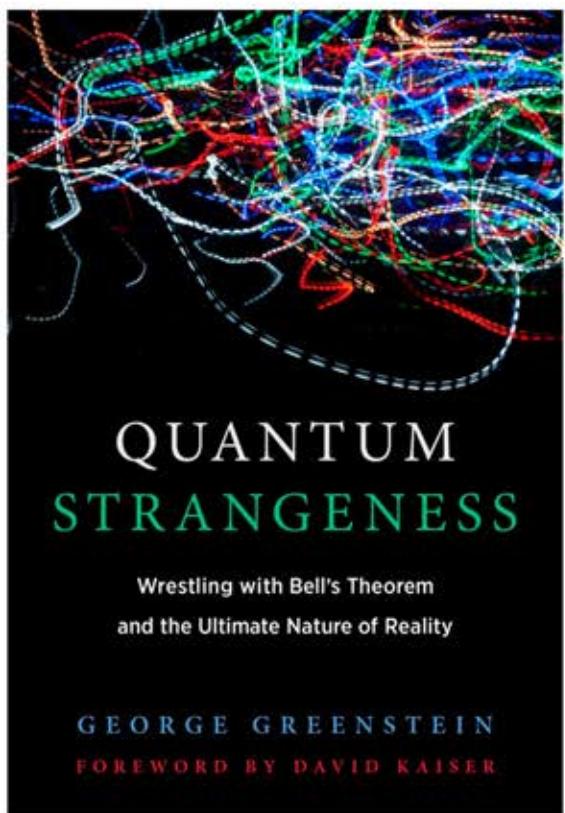

- 1 Aims**
- 2 Basics: The Schrödinger Condition**
- 3 The Dimensions of Space**
- 4 Momenta, Operators, and a Problem**
- 5 Approximation and Interpretation**
- 6 Spin in Schrödinger's Theory**
- 7 Relativistic Equations**
- 8 Fields and Second Quantisation**

Contents

Part 1 Metal-Organic Frameworks

- 1 Emergence of Metal-Organic Frameworks**
 - 2 Determination and Design of Porosity**
 - 3 Building Units of MOFs**
 - 4 Binary Metal-Organic Frameworks**
 - 5 Complexity and Heterogeneity in MOFs**
 - 6 Functionalization of MOFs**
 - 7 Historical Perspective on the Discovery of Covalent Organic Frameworks**
 - 8 Linkages in Covalent Organic Frameworks**
 - 9 Reticular Design of Covalent Organic Frameworks**
 - 10 Functionalization of COFs**
 - 11 Nanoscopic and Macroscopic Structuring of Covalent Organic Frameworks**
- Part III Applications of Metal-Organic Frameworks**
- 12 The Applications of Reticular Framework Materials**
 - 13 The Basics of Gas Sorption and Separation in MOFs**
 - 14 CO₂ Capture and Sequestration**
 - 15 Hydrogen and Methane Storage in MOFs**
 - 16 Liquid- and Gas-Phase Separation in MOFs**
 - 17 Water Sorption Applications of MOFs**
- Part IV Special Topics**
- 18. Topology**
 - 19. Metal-Organic Polyhedra and Covalent Organic Polyhedra**
 - 20. Zeolitic Imidazolate Frameworks**
 - 21 Dynamic Frameworks**

Quantum Strangeness : Wrestling with Bell's Theorem and the Ultimate Nature of Reality

George S. Greenstein

Contents

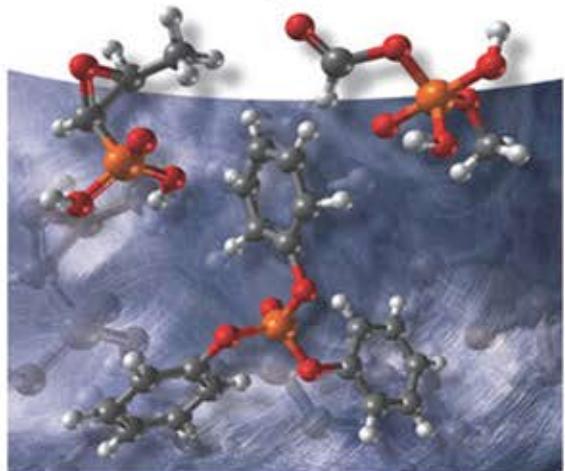

- 1. The Great Predictor**
- Background to Bell**
- 2. Silence**
- 3. Half a Theory?**
- 4. The Solvay Battles**
- 5. Spin**
- 6. An impoverished Language?**
- 7. The EPR Paradox**
- 8. Hidden Variables**
- Bell's Theorem**
- 9. A Hidden Variable Theory**
- 10. Bell's Theorem**
- 11. Stigma**
- Experimental Metaphysics**
- 12. Experimental...**
- 13. ...Metaphysics**
- 14. Nonlocality**
- 15. Quantum machines**
- 16. A New Universe**

WILEY-VCH

Edited by Viktor Iaroshenko

Organophosphorus Chemistry

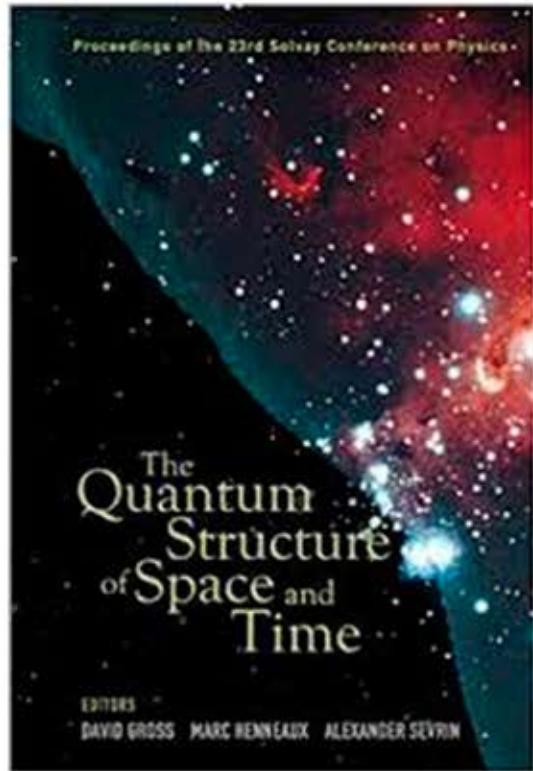

From Molecules to Applications

Organophosphorus Chemistry: From Molecules to Applications
Viktor Iaroshenko (Editor)

Contents

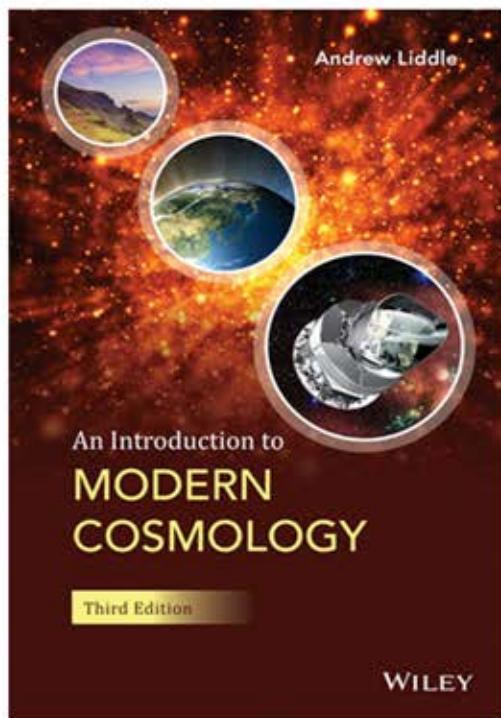

- 1 Phosphines and Related Tervalent Phosphorus Systems**
- 2 Recent Developments in Phosphonium Chemistry**
- 3 Phosphorus Ylides and Related Compounds**
- 4 Low-Coordinate Phosphorus Compounds with Phosphaorganic Multiple Bond Systems**
- 5 Pentacoordinate Phosphorus Compounds**
- 6 Hexacoordinate Phosphorus Compounds**
- 6.4 Theoretical Studies on Hexacoordinate Phosphorus Compounds**
- 7 Methods for the Introduction of the Phosphonate Moiety into Complex Organic Molecules**
- 8 Phosphorus Heterocycles**
- 9 Modern Aspects of ^{31}P NMR Spectroscopy**
- 10 Phosphorus in Chemical Biology and Medicinal Chemistry**
- 11 Future Trends in Organophosphorus Chemistry**

The quantum structure of space and time
Edited By: David Gross, Marc Henneaux and Alexander Sevrin

Contents

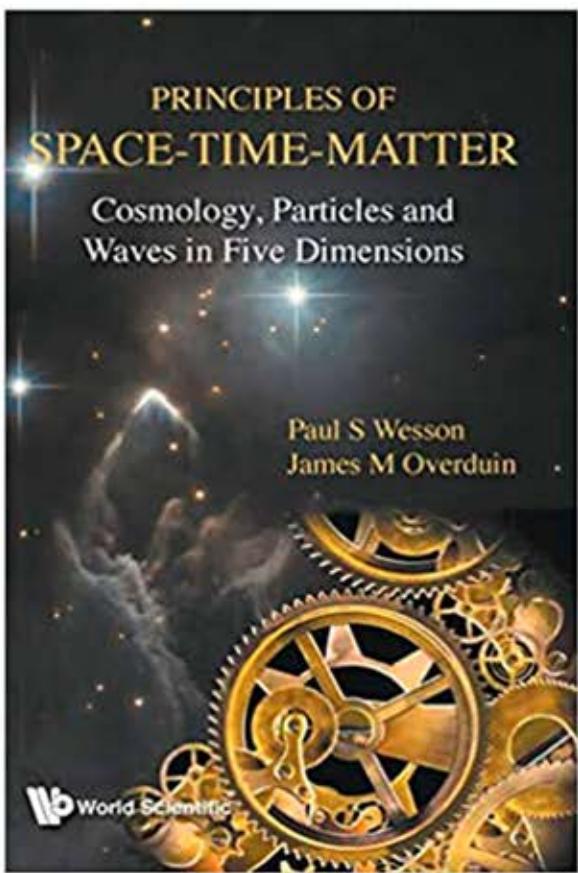

- The International Solvay Institutes**
- 23rd Solvay Conference on Physics**
- Opening Session**
- 1. History**
- 2. Quantum Mechanics**
- 3. Singularities**
- 4. Mathematical Structures**
- 5. Emergent Spacetime**
- 6. Cosmology**
- 7. Closing remarks by David Gross**

An Introduction to Modern Cosmology, 3rd Edition
Andrew Liddle

Contents

- 1 A (Very) Brief History of Cosmological Ideas**
- 2 Observational Overview**
- 3 Newtonian Gravity**
- 4 The Geometry of the Universe**
- 5 Simple Cosmological Models**
- 6 Observational Parameters**
- 7 The Cosmological Constant**
- 8 The Age of the Universe**
- 9 The Density of the Universe and Dark Matter**
- 10 The Cosmic Microwave Background**
- 11 The Early Universe**
- 12 Nucleosynthesis: The Origin of the Light Elements**
- 13 The Inflationary Universe**
- 14 The Initial Singularity**
- 15 Overview: The Standard Cosmological Model**
- Advanced Topic 1 General Relativistic Cosmology**
- Advanced Topic 2 Classic Cosmology: Distances and Luminosities**
- Advanced Topic 3 Neutrino Cosmology**
- Advanced Topic 4 Baryogenesis**
- Advanced Topic 5 Structures in the Universe**
- Advanced Topic 6 Constraining cosmological models**

Principles of Space-Time-Matter : Cosmology, Particles and Waves in Five Dimensions

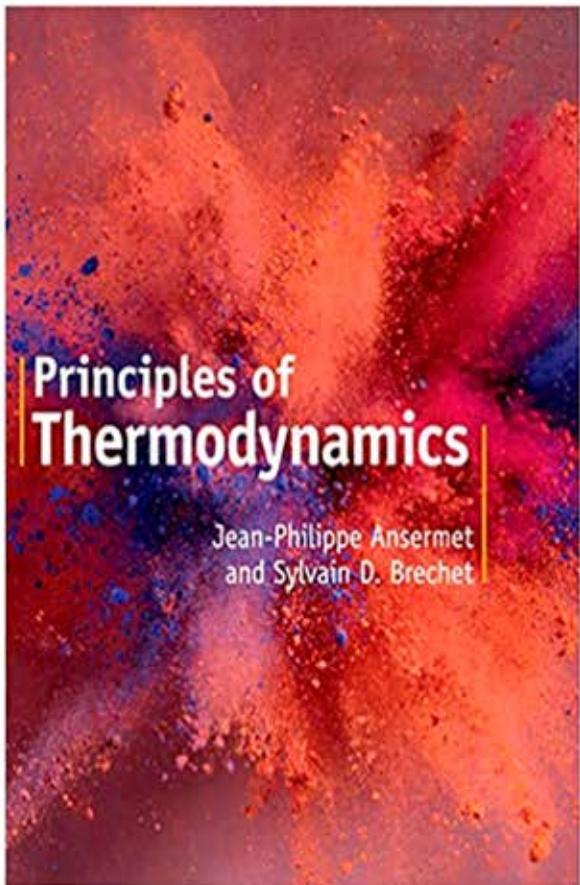

Paul S Wesson and James M Overdium

Contents

- Chapter 1: Standard General Relativity**
- Chapter 2: Space-Time-Matter Theory**
- Chapter 3: Cosmology in 5D**
- Chapter 4: Astrophysics in 5D**
- Chapter 5: The Solitons**
- Chapter 6: Electromagnetism in 5D**
- Chapter 7: Canonical Space**
- Chapter 8: Particles, Waves and Vacuum**
- Chapter 9: The Fifth Dimension**
- Appendix: Paul Wesson (1949–2015)**

Principles of Thermodynamics

Jean-Philippe Ansermet and Sylvain D. Brechet

Contents

Part I Foundations

- 1. Thermodynamic system and first law**
- 2. Entropy and second law**
- 3. Thermodynamics of subsystems**
- 4. Thermodynamic potentials**

Part II Phenomenology

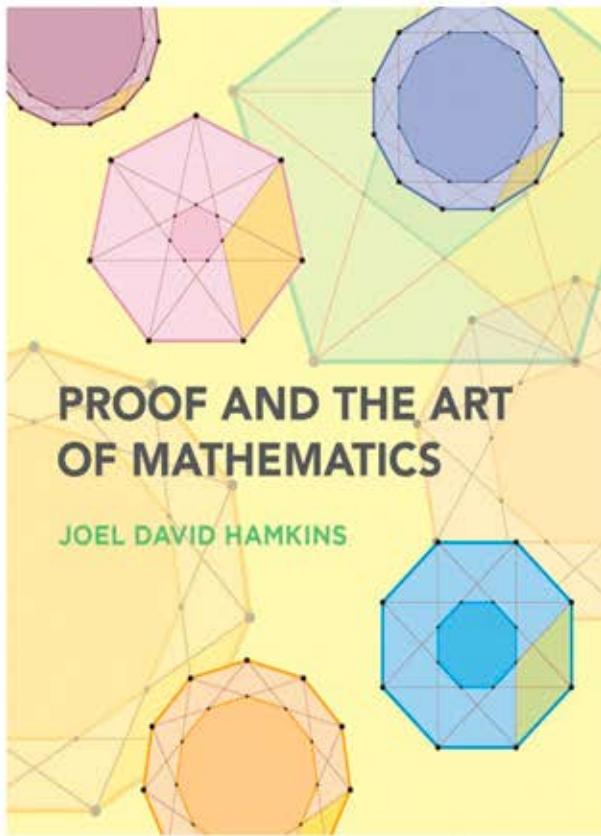

- 5. Calorimetry**
- 6. Phase transitions**
- 7. Heat engines**
- 8. Chemistry and electrochemistry**

Part III Continuous Media

- 9. Matter and electromagnetic fields**
- 10. Thermodynamics of continuous media**
- 11. Thermodynamics of irreversible processes**

Part IV Exercises and Solutions

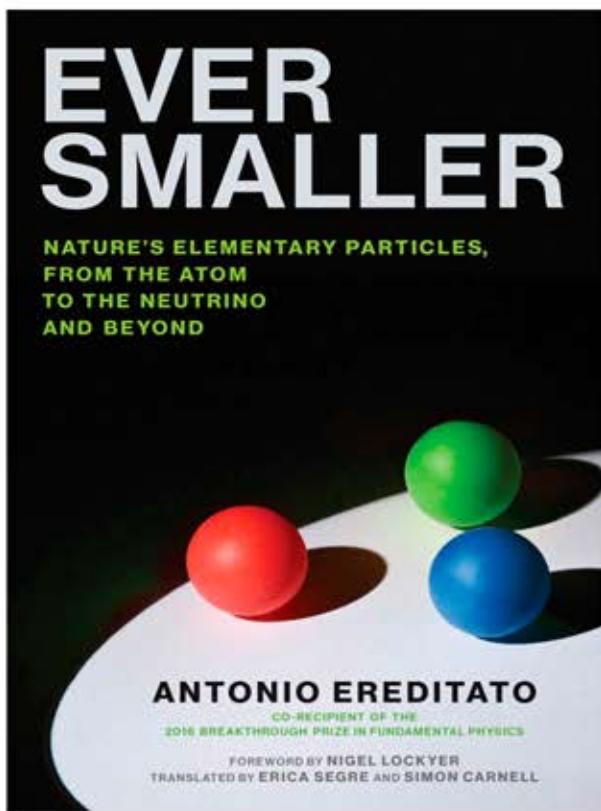

- 12. Thermodynamic system and first law**
- 13. Entropy and second law**
- 14. Thermodynamics of subsystems**
- 15. Thermodynamic potentials**
- 16. Calorimetry**
- 17. Phase transitions**
- 18. Heat engines**
- 19. Chemistry and electrochemistry**
- 20. Matter and electromagnetic fields**
- 21. Thermodynamics of continuous media**
- 22. Thermodynamics of irreversible processes**

Proof and the art of mathematics
Joel David Hamkins

Contents

- 1 A classical beginning**
- 2 Multiple proofs**
- 3 Number theory**
- 4 Mathematical induction**
- 5 Discrete mathematics**
- 6 Proofs without words**
- 7 Theory of games**
- 8 Pick's theorem**
- 9 Lattice-Point polygons**
- 10 Polygonal dissection congruence theorem**
- 11 Functions and relations**
- 12 Graph theory**
- 13 Infinity**
- 14 Order theory**
- 15 Real analysis**

Ever smaller: nature's elementary particles, from the atom to the neutrino and beyond
Antonio Ereditato

Contents

- 1. Atoms**
- 2. The indivisible and the divisible**
- 3. Everything is relative**
- 4. The Certainty of chance**
- 5. The Family grows**
- 6. Energized particles**
- 7. Three quarks for Muster Mark!**
- 8. May the force be with us!**
- 9. The world through the looking-glass**
- 10. The most beautiful theory in the world**
- 11. The color of elementary particle physics**
- 12. The November revolution**
- 13. Weak, but very influential**
- 14. The chameleon**
- 15. Seeing the invisible**
- 16. United we win**
- 17. Dreams, the unknown, adventure**
- 18. Be curious**
