

# Boletín de Adquisiciones Octubre 2022 Parte 2

#### Advanced Topics in Quantum Field Theory A Lecture Course Mikhail Shifman

#### Contents

# Introduction

Part I Before Supersymmetry

- **1** Phases of Gauge Theories
- 2 Kinks and DomainWalls
- 3 Vortices and Flux Tubes (Strings)
- 4 Monopoles and Skyrmions
- 5 Instantons
- 6 Isotropic (Anti)ferromagnet: O(3) Sigma Model and Extensions, Including CP(N – 1)
- 7 False-Vacuum Decay and Related Topics
- 8 Chiral and Other Anomalies
- 9 Confinement in 4D Gauge Theories and Models in Lower Dimensions

Part II Introduction to Supersymmetry

- **10** Basics of Supersymmetry with Emphasis on Gauge Theories
- **11 Supersymmetric Solitons**
- Part III Solutions to Exercises

Astrophysics: Decoding the Cosmos 2nd Edition Judith Ann Irwin

# Contents

Introduction

Part I: The Nonelectromagnetic Signal **Chapter 1: The Particles: Macroscopic to Subatomic Chapter 2: Gravitational Radiation: A New Window** Part II: The EM Signal Observed **Chapter 3: Defining the Signal Chapter 4: Measuring the Signal** Part III: Matter and Radiation Essentials **Chapter 5: Matter Essentials Chapter 6: Radiation Essentials Part IV: The EM Signal Perturbed Chapter 7: The Interaction of Light with Matter Chapter 8: The Signal Transferred Chapter 9: The Interaction of Light with Space Part V: The EM Signal Emitted Chapter 10: Continuum Emission Chapter 11: Line Emission** Part VI: The Signal Decoded **Chapter 12: Forensic Astronomy** 

# **Table of contents**

- **Chapter 1 Fundamentals of Quantum Physics**
- **Chapter 2 Origin of Quantum Theory**
- **Chapter 3 Duality of Waves and Particles**
- Chapter 4 Quantum Mechanics and discontinuous Motion of Particles
- **Chapter 5 Quantum Mechanical Tunneling**
- **Chapter 6 Interpretations of Quantum Mechanics**
- Chapter 7 Classification of Interpretations for Quantum Mechanics
- **Chapter 8 Transactional Interpretation of Quantum Physics**

Essential Astrophysics : Interstellar Medium to Stellar Remnants Shantanu Basu and Pranav Sharma

# Contents

Chapter 1 Introduction Chapter 2 The Interstellar Medium Chapter 3 Star Formation Chapter 4 Stars Chapter 5 Stellar Evolution Chapter 6 Stellar and Planetary Systems Chapter 7 Stellar Remnants

# Vibrations and Waves Edited by Theodros Varzakas

# **Table of contents**

Chapter 1 Simple Harmonic Motion Chapter 2 The Damped Harmonic Oscillator Chapter 3 Forced Oscillations Chapter 4 Coupled Oscillators Chapter 5 Travelling Waves Chapter 6 Interference and Diffraction of Waves Chapter 7 The Dispersion of Waves

# String theory Graham Town, ed.

# Table of contents

Chapter 1 The Classical Bosonic String Chapter 2 The Quantized Bosonic String Chapter 3 Conformal Field Theory Chapter 4 String Compactifications Chapter 5 String Perturbation Theory and One-Loop Amplitudes Chapter 6 The classical Fermionic String Chapter 7 Superstrings

# Introduction to Stellar Dynamics Luca Ciotti

# Contents

- Part I Potential Theory
- 1 The Gravitational Field
- 2 The Gravitational Potential
- 3 Tidal Fields
- 4 The Two-Body Problem
- **5** Quasi-Circular Orbits
- Part II Systems of Particles
- 6 The N-Body Problem and the Virial Theorem
- 7 Relaxation 1: Two-Body Relaxation
- 8 Relaxation 2: Dynamical Friction
- Part III Collisionless Systems
- 9 The Collisionless Boltzmann Equation and the Jeans Theorem
- 10 The Jeans Equations and the Tensor Virial Theorem
- **11 Projected Dynamics**
- 12 Modeling Techniques 1: Phase-Space Approach
- **13 Modeling Techniques 2: Moments Approach**
- **14 Modeling Techniques 3: From** ρ **to** *f*
- **Appendix Mathematical Background**

# Cosmochemistry Harry Y. McSween, Jr, and Gary R. Huss

# Contents

- **1** Introduction to cosmochemistry
- 2 Nuclides and elements: the building blocks of matter
- **3** Origin of the elements
- 4 Solar system and cosmic abundances: elements and isotopes
- 5 Presolar grains: a record of stellar nucleosynthesis and processes in interstellar space
- 6 Meteorites: a record of nebular and planetary processes
- 7 Cosmochemical and geochemical fractionations
- 8 Radioisotopes as chronometers
- 9 Chronology of the solar system from radioactive isotopes
- 10 The most volatile elements and compounds: organic matter, noble gases, and ices
- **11** Chemistry of anhydrous planetesimals
- 12 Chemistry of comets and other ice-bearing planetesimals
- 13 Geochemical exploration of planets: Moon and Mars as case studies
- 14 Cosmochemical models for the formation of the solar system

Interfacial Chemistry of Rocks and Soils Noémi M. Nagy, and József Kónya

#### Contents

Preface to the First Edition Preface to the Second Edition Authors

Chapter 1 Components of Soil- and Rock-Solution Systems Chapter 2 Interfacial Processes in Geological Systems:

Studies on Montmorillonite Model Substance

Chapter 3 Interfacial Reactions at Rock and Soil Interfaces Chapter 4 Experimental Methods in Studying Interfacial Processes of Rocks and Soils

Fundamentals of Crystallography, Powder X-ray Diffraction, and Transmission Electron Microscopy for Materials Scientists Dong ZhiLi

#### Contents

Part I: Introduction to Crystallography Chapter 1 Periodicity of Crystals and Bravais Lattices Chapter 2 Symmetry of Crystals, Point Groups and Space Groups Chapter 3 Reciprocal Lattice Chapter 4 Examples for Crystal Structure Representation Part II X-ray Diffraction of Materials Chapter 5 Geometry of X-ray Diffraction Chapter 6 Intensity of Diffracted X-ray Beams Chapter 7 Experimental Methods and Powder X-ray Diffractometer Chapter 8 Rietveld Refinement of Powder X-ray Diffraction Patterns Part III Transmission Electron Microscopy of Materials Chapter 9 Atomic Scattering Factors for Electrons and X-rays Chapter 10 Electron Diffraction in Transmission Electron Microscope Chapter 11. Diffraction Contrast Chapter 12. Phase Contrast

# Physics of Data Science and Machine Learning Bljaz A. Rauf

# Contents

- **Chapter 1: Introduction**
- **Chapter 2: An Overview of Classical Mechanics**
- **Chapter 3: An Overview of Quantum Mechanics**
- **Chapter 4: Probabilistic Physics**
- Chapter 5: Design of Experiments and Analyses
- **Chapter 6: Basics of Machine Learning**
- Chapter 7: Prediction, Optimization, and New Knowledge Development

The Adventure of the Large Hadron Collider : From the Big Bang to the Higgs Boson Daniel Denegri, Claude Guyot, Andreas Hoecker and Lydia Roos

# The Adventure of the LARGE HADRON COLLIDER From the Big Bang to the Higgs Boson

# Contents

Introduction

- 1. The Standard Model of Elementary Particle Physics
- 2. Key Experiments Establishing the Standard Model
- 3. What the Standard Model Cannot Explain
- 4. How Could New Physics Look Like?
- 5. Back to the Big Bang
- 6. The LHC
- 7. What is a Particle Detector?
- 8. The ATLAS and CMS Experiments
- 9. LHC Start-Up and Data Taking
- 10. Data Analysis
- 11. The Higgs Boson: Search and Discovery
- 12. Testing the Standard Model
- **13. The Quest for New Physics**
- 14. LHCb and ALICE: The Physics of Flavour and of Hot & Dense Matter
- 15. Looking Ahead
- 16. Conclusions

# Quantum Field Theory Edited by Gaetano Scholz

# **Table of contents**

- Chapter 1 Introduction to Quantum Field Theory
- Chapter 2 Perturbation Theory
- **Chapter 3 Quantum Electrodynamics**
- **Chapter 4 Spontaneous Symmetry Breaking**
- **Chapter 5 Functional Quantization**
- **Chapter 6 Path Integrals for Fermions and Photons**
- **Chapter 7 Lattice field theory**

Physiological Control Systems: Analysis, Simulation, and Estimation 2nd Edition Michael C. K. Khoo

# Contents

- 1 Introduction
- 2 Mathematical Modeling
- 3 Static Analysis of Physiological Systems
- 4 Time-Domain Analysis of Linear Control Systems
- **5** Frequency-Domain Analysis of Linear Control Systems
- 6 Stability Analysis: Linear Approaches
- 7 Digital Simulation of Continuous-Time Systems
- 8 Model Identification and Parameter Estimation
- 9 Estimation and Control of Time-Varying Systems
- **10 Nonlinear Analysis of Physiological Control Systems**
- **11 Complex Dynamics in Physiological Control Systems**

Introduction to High Energy Physics : Particle Physics for the Beginner Lee G Pondrom

#### Contents

Chapter 1. Introduction

- **Chapter 2. Special Relativity**
- **Chapter 3. A Little Field Theory**
- **Chapter 4. Quantum Electrodynamics**
- **Chapter 5. Electrodynamics with Protons and Neutrons**
- Chapter 6. Weak Interactions
- **Chapter 7. Electroweak Phenomenology**
- **Chapter 8. Electroweak Theory**
- Chapter 9. Heavy Quark Bound States, Mixing, and CP Violatio

Quantum Mechanics for Beginners: Fundamental Theories of Quantum Mechanics and Hidden Secrets of the Universe Made Easy Alexander Schlotterbeck

**Table of Content** 

INTRODUCTION THE FATHER OF QUANTUM THEORY THE BOHR ATOMIC MODEL THE SCHRÖDINGER EQUATION **EINSTEIN'S RELATIVITY** THE EQUIVALENCE PRINCIPLE THE PROBLEM OF INERTIAL FORCES **RELATIVITY OF GRAVITY** THE DOUBLE-SLIT EXPERIMENT A GAME OF CHANCE **BLACK BODY EMISSION QUANTUM REALITY** MATHEMATICS THE LANGUAGE OF PHYSICS **EXAMPLES OF WHERE APPLIED MATHEMATICS RELATES** TO THE WORLD WHAT ARE YOUR QUANTUM THOUGHTS **QUANTUM MIND TACTIS QUANTUM DIMENSION** CONCLUSION

# Contents

- 1. Introduction
- 2. The Harmonic Oscillator: A Treatment by Fock Operators
- 3. Time-Dependent Perturbation Expansions
- 4. Spinless Particles
- 5. Charge and Spin
- 6. The Perfect Molecular Gas
- 7. Real Gases and Phase Transitions
- 8. Photons
- 9. Light-Molecule Interaction
- 10. Conclusions, Acknowledgements, and References

Cavitation and Associated Phenomena By Dmitry A. Biryukov, Denis N. Gerasimov, Eugeny I. Yurin

# Cavitation and Associated Phenomena

Dmitry A. Biryukov Denis N. Gerasimov Eugeny I. Yurin

# Contents

- 1. Morphology of Cavitation
- 2. Cavitation in Engineering
- 3. Pressure: Positive and Negative
- 4. Hydrodynamics of Cavitation
- 5. Hydraulic Shocks 6. Acoustic Cavitation
- 7. Dynamics of a Cavitating Bubble
- 8. Electrization of Liquids
- 9. Cavitation and Light Emission

Classical and Quantum Statistical Physics : Fundamentals and Advanced Topics Carlo Heissenberg and Augusto Sagnotti

#### Contents

#### Part I

- **1** Elements of Thermodynamics
- 2 The Classical Ensembles
- **3 Aspects of Quantum Mechanics**
- **4** Systems of Quantum Oscillators
- **5** Vacuum Fluctuations
- 6 The van derWaals Theory
- 7 The Grand Canonical Ensemble
- 8 Quantum Statistics
- 9 Magnetism in Matter, I
- 10 Magnetism in Matter, II
- 11 The 2D Ising Model
- **12 The Heisenberg Spin Chain**
- 13 Conformal Invariance and the Renormalization Group
- 14 The Approach of Equilibrium
