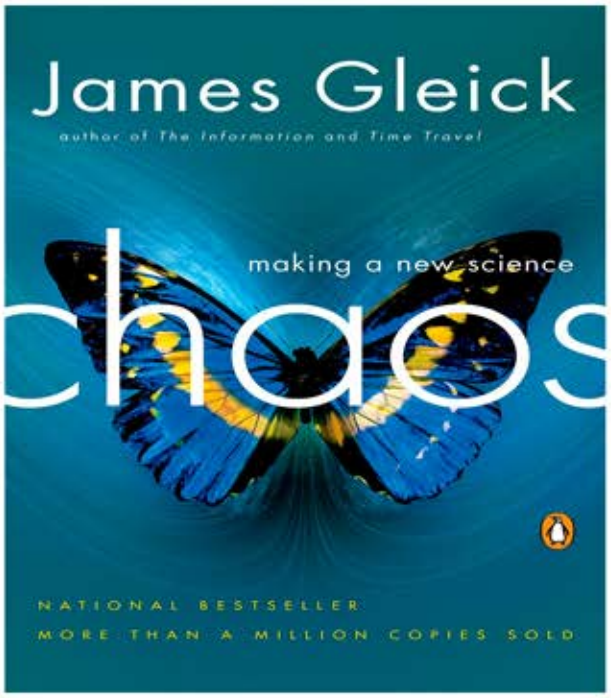
Boletín de Adquisiciones Octubre 2022 Parte 3

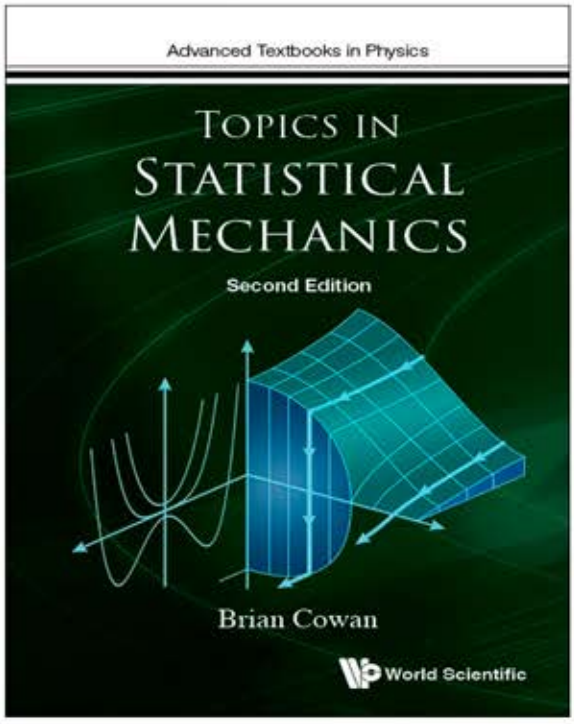
Chaos : Making a New Science
James Gleick



Contents

The Butterfly Effect
Revolution
Life's Ups and Downs
A Geometry of Nature
Strange Attractors
Universality
The Experimenter
Images of Chaos
The Dynamical Systems Collective
Inner Rhythms
Chaos and Beyond Afterword
Notes on Sources and Further Reading

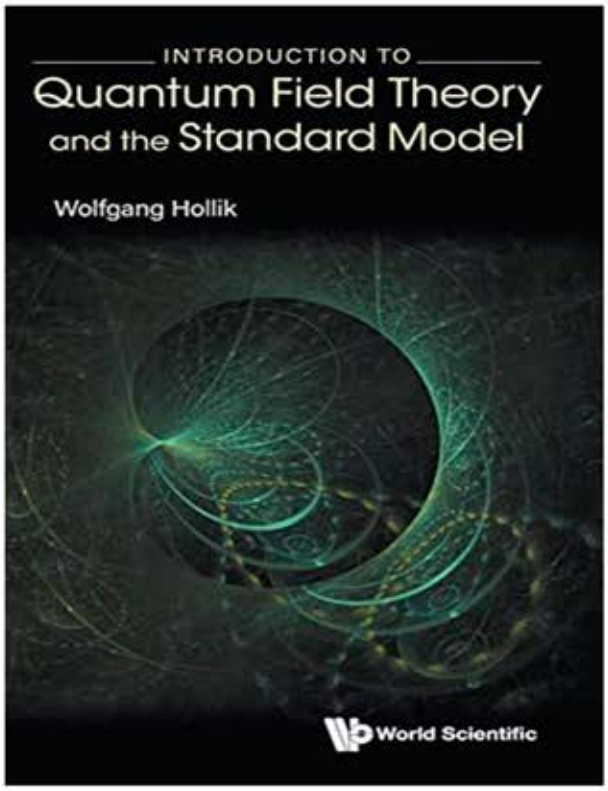
Topics in Statistical Mechanics
Brian Cowan



Contents

1 The Methodology 0f Statistical Mechanics
2 Practical Calculations with Ideal Systems
3 Non-Ideal Gases
4 Phase Transitions
5 Fluctuations and Dynamics

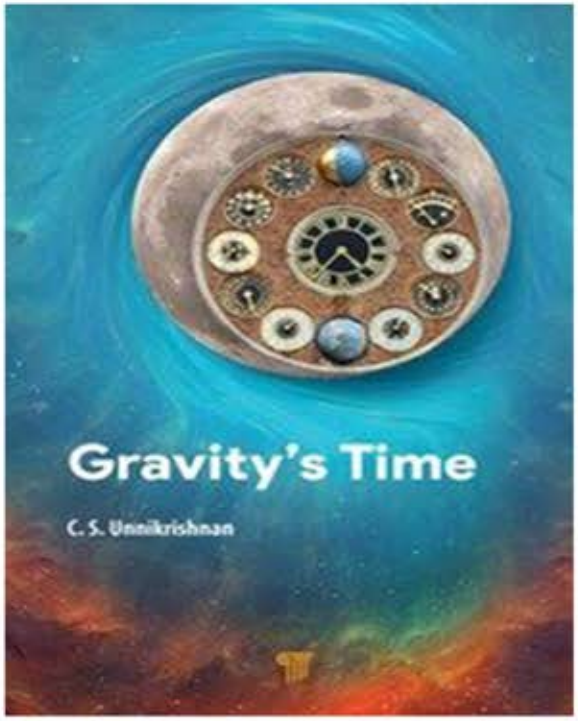
Introduction to Quantum Field Theory and the Standard Model
Wolfgang Hollik



Contents

1. Special Relativity
2. Elements of Relativistic Quantum Field Theory
3. Quantum Electrodynamics
4. Lagrangians and Symmetries
5. Quantum Chromodynamics
6. Electroweak Theory

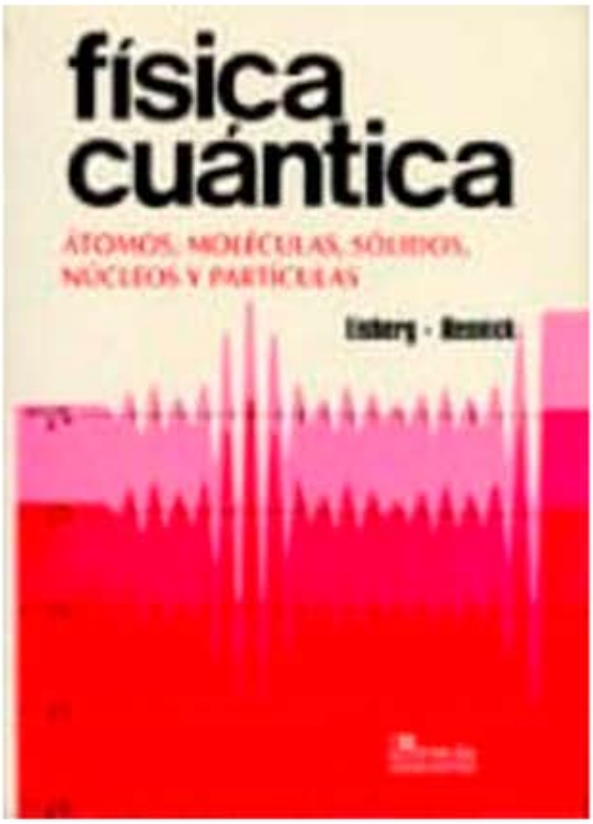
Gravity's Time
C. S. Unnikrishnan



Contents

1 Time
2 Gravity
3 Time and Motion
4 Our Universe and Cosmic Gravity
5 Gravity's Time
6 Interlude on Simultaneity and the One-Way Speed of Light
7 The Moving Clocks of Navigational Satellite Systems
8 The Dissemination of Standard Time
9 Gravity's Time in Quantum Mechanics
10 Apparent Arrows of the Corporeal Time
11 The Last Ticks

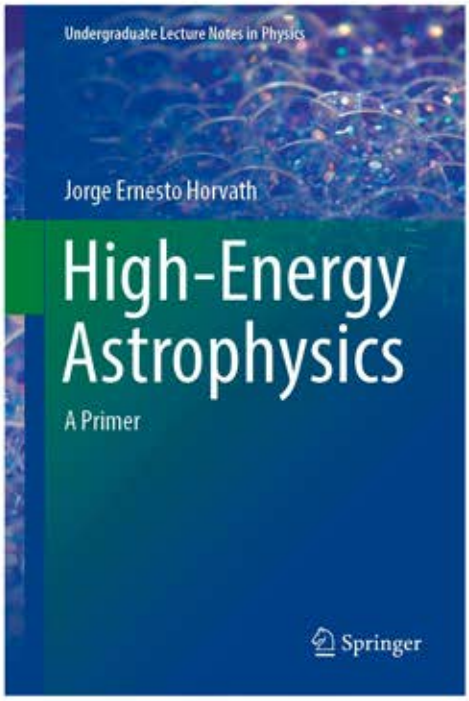
Física cuántica : átomos, moléculas, sólidos, nucleos y partículas
Robert Eisberg y Robert Resnick



Contenido

1 Radiación térmica y el postulado de Planck
2 Fotones-Propiedades corpusculares de la radiación
3 Postulado de de Broglie. Propiedades ondulatorias de las partículas
4 Modelo atómico de Bohr
5 Teoría de Schrödinger de la mecánica cuántica
6 Soluciones a las ecuaciones de Schrödinger independientes del tiempo
7 Atomos con un electrón
8 Momentos magnéticos dipolares, spin y razones de transición
9 Atomos multielectrónicos-estados base y excitaciones de rayos X
10 Atomos multielectrónicos-excitaciones ópticas
11 Estadítica cuántica
12 Moléculas
13 Sólidos-Conductores y semiconductores
14 Sólidos-Superconductores y propiedades magnéticas
15 Modelos nucleares
16 Decaimiento nuclear y reacciones nucleares
17 Partículas elementales

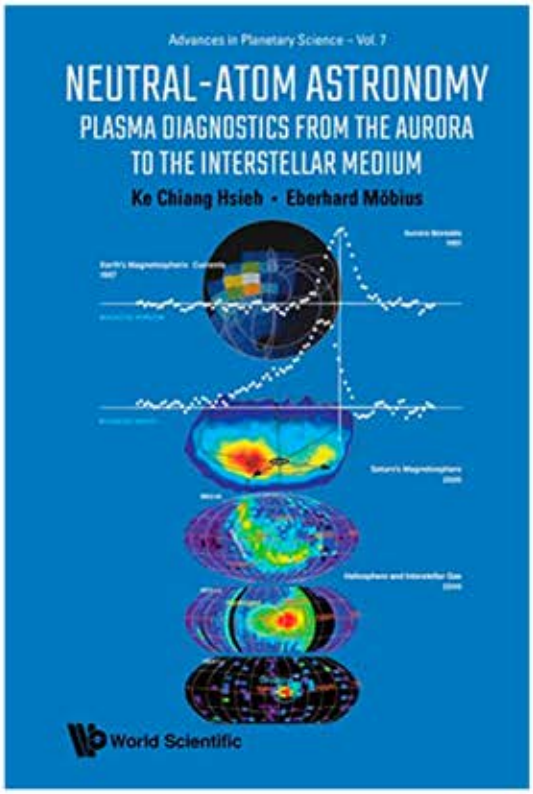
High-Energy Astrophysics : A Primer
Jorge Ernesto Horvath



Contents

1 The Nature of the Physical World: Elementary Particles and Interactions
2 Elementary Processes at High Energies
3 Detection and Instrumentation in High-Energy Astrophysics
4 Stellar Evolution up to the Final Stages
5 Supernovae
6 Astrophysics of Compact Objects
7 Accretion in Astrophysics
8 Active Galactic Nuclei (AGNs)
9 Neutrino Astrophysics
10 Gravitational Waves
11 Gamma-Ray Bursts
12 Cosmic Rays

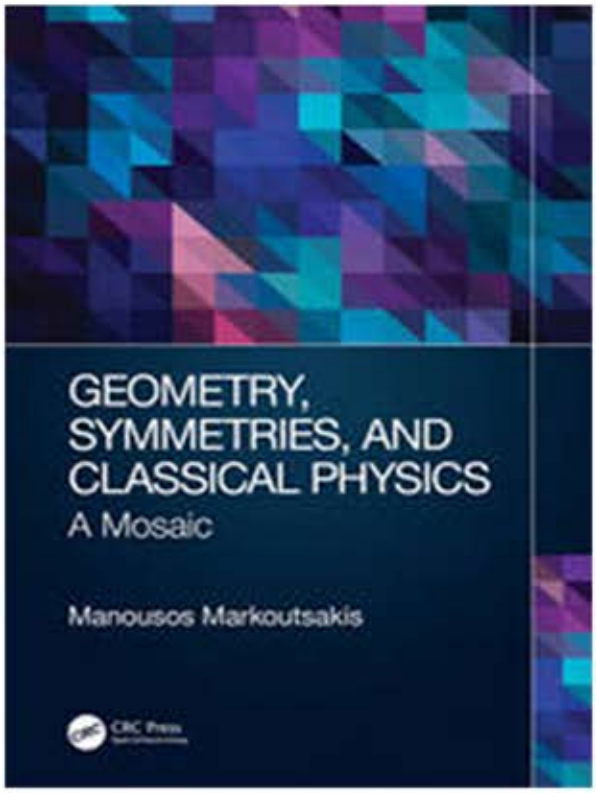
Neutral-Atom Astronomy : Plasma Diagnostics from the Aurora to the Interstellar Medium
Ke Chiang Hsieh and Eberhard Möbius



Contents

Chapter 1. Introduction
Chapter 2. First Encounters with ENAs
Chapter 3. Remote Sensing of Space Plasma Through ENA Observations
Chapter 4. ENA Instrumentation: General
Chapter 5. ENA Sensor Implementations
Chapter 6. ENAs from Magnetospheres and Small Bodies in the Solar System
Chapter 7. ENA Diagnostics of the Heliosphere-Interstellar Medium Interaction
Chapter 8. What Have ENAs Revealed and What is Next?

Geometry, Symmetries, and Classical Physics : A Mosaic
Manousos Markoutsakis

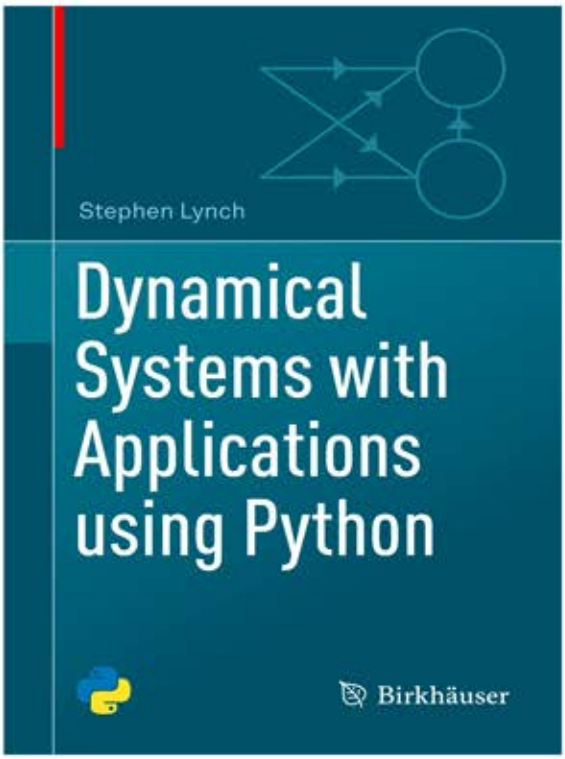


Contents

Part I: Geometric Manifolds
1 Manifolds and Tensors.
2 Geometry and Integration on Manifolds.
3 Symmetries of Manifolds.
Part II: Mechanics and Symmetry
4 Newtonian Mechanics.
5 Lagrangian Methods and Symmetry.
6 Relativistic Mechanics.
Part III : Symmetry Groups and Algebras
7 Lie Groups.
8 Lie Algebras.
9 Representations.
10 Rotations and Euclidean Symmetry.
11 Boosts and Galilei Symmetry.
12 Lorentz Symmetry.
13 Poincare Symmetry.
14 Conformal Symmetry.

Part IV: Classical Fields
15 Lagrangians and Noether's Theorem.
16 Spacetime Symmetries of Fields.
17 Gauge Symmetry.
Part V: Riemannian Geometry
18 Connection and Geodesics.
19 Riemannian Curvature.
20 Symmetries of Riemannian Manifolds.
Part VI: General Relativity and Symmetry
21 Einstein's Gravitation.
22 Lagrangian Formulation.
23 Conservation Laws and Further Symmetries.
Part VII: Appendices

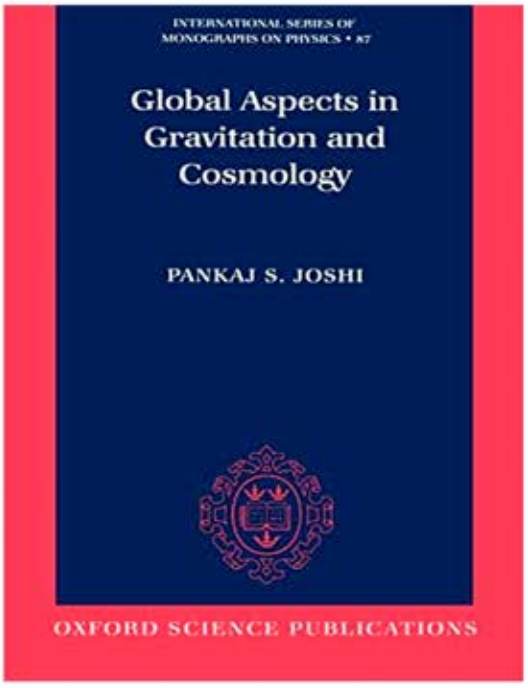
Dynamical Systems with Applications using Python
Stephen Lynch



Contents

1 A Tutorial Introduction to Python
2 Differential Equations
3 Planar Systems
4 Interacting Species
5 Limit Cycles
6 Hamiltonian Systems, Lyapunov Functions, and Stability
7 Bifurcation Theory
8 Three-Dimensional Autonomous Systems and Chaos
9 Poincaré Maps and Nonautonomous Systems in the Plane
10 Local and Global Bifurcations
11 The Second Part of Hilbert's Sixteenth Problem
12 Delay Differential Equations
13 Linear Discrete Dynamical Systems
14 Nonlinear Discrete Dynamical Systems
15 Complex Iterative Maps
16 Electromagnetic Waves and Optical Resonators
17 Fractals and Multifractals
18 Image Processing with Python
19 Chaos Control and Synchronization
20 Neural Networks
21 Binary Oscillator Computing
22 Coursework and Examination-Type Questions
23 Solutions to Exercises

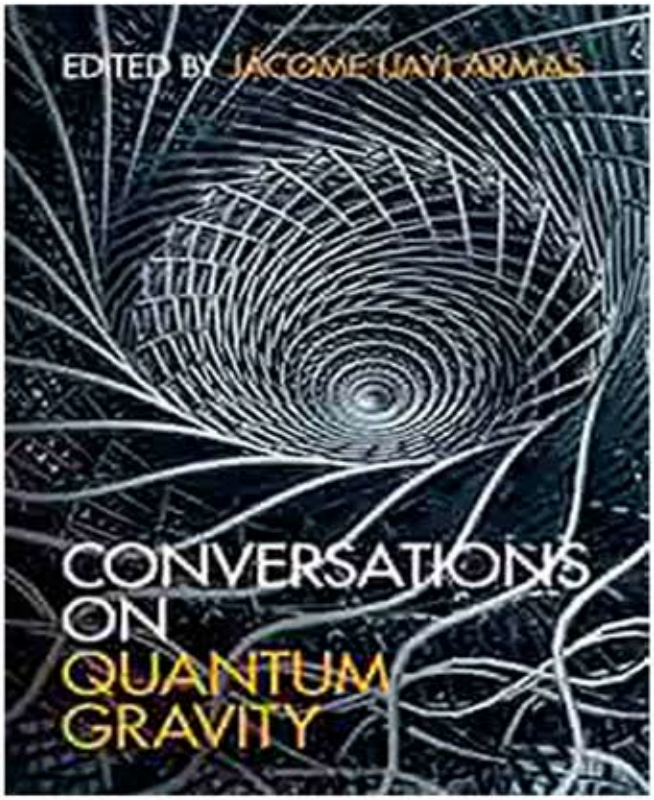
Global Aspects in Gravitation and Cosmology
Pankaj S. Joshi



Contents

1. Global themes in gravity
2. The manifold model for space-time
3. Solutions to the Einstein equations
4. Causality and space-time topology
5. Singularities in general relativity
6. Gravitational collapse and cosmic censorship
7. General constraints on naked singularity formation
8. Global upper limits in cosmology
9. Quantum effects near the space-time singularity

Conversations on Quantum Gravity
Edited by Jácome (Jay) Armas

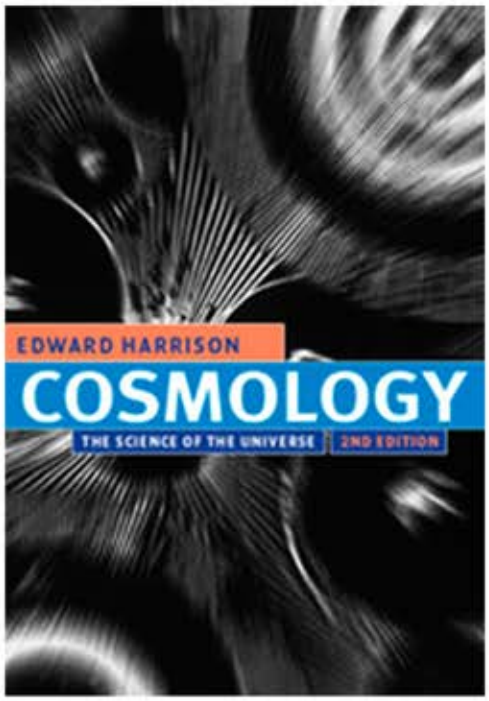


Contents

Preface: Why This Book and Why Did It Take So Long?
Introduction
The Interviews

1 Jan Ambjørn
2 Nima Arkani-Hamed
3 Abhay Ashtekar
4 Jan de Boer
5 Steven Carlip
6 Alain Connes
7 Robbert Dijkgraaf
8 Bianca Dittrich
9 Fay Dowker
10 Laurent Freidel
11 Steven Giddings
12 Rajesh Gopakumar
13 David J. Gross
14 Gerard 't Hooft
15 Petr Hořava
16 Renate Loll
17 Juan Maldacena
18 Shiraz Minwalla
19 Hermann Nicolai
20 Roger Penrose
21 Joseph Polchinski
22 Alexander Polyakov
23 Martin Reuter
24 Carlo Rovelli
25 Nathan Seiberg
26 Ashoke Sen
27 Eva Silverstein
28 Lee Smolin
29 Rafael Sorkin
30 Andrew Strominger
31 Leonard Susskind
32 Thomas Thiemann
33 Cumrun Vafa
34 Erik Verlinde
35 Steven Weinberg
36 Frank Wilczek
37 Edward Witten

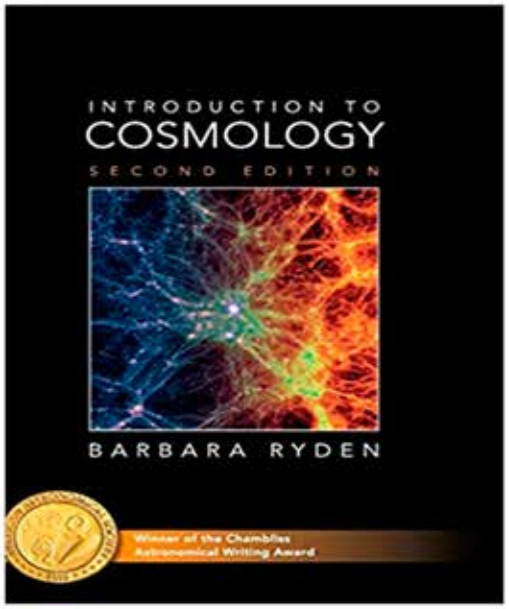
Cosmology : The Science of the Universe
Edward Harrison



Contents

Part I
1. What is cosmology?
2. Early scientific cosmology
3. Cartesian and Newtonian world systems
4. Cosmology after Newton and before Einstein
5. Stars
6. Galaxies
7. Location and the cosmic center
8. Containment and the cosmic edge
9. Space and time
Part II
10. Curved space
11. Special relativity
12. General relativity
13. Black holes
14. Expansion of the universe
15. Cosmic redshifts
16. Newtonian cosmology
17. Cosmic box
18. Many universes
19. Observational cosmology
Part III
20. The early universe
21. Horizons in the universe
22. Inflation
23. The cosmic numbers
24. Darkness at night
25. Creation of the universe
26. Life in the universe

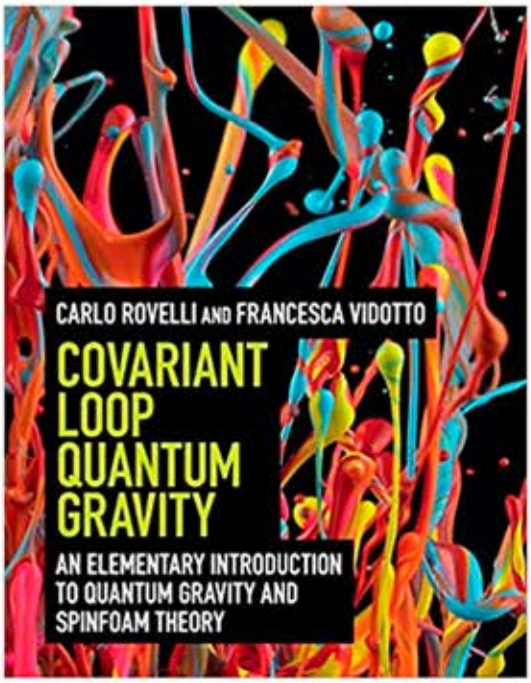
Introduction to cosmology
Barbara Ryden



Contents

1 Introduction
2 Fundamental Observations
3 Newton versus Einstein
4 Cosmic Dynamics
5 Model Universes
6 Measuring Cosmological Parameters
7 Dark Matter
8 The Cosmic Microwave Background
9 Nucleosynthesis and the Early Universe
10 Inflation and the Very Early Universe
11 Structure Formation: Gravitational Instability
12 Structure Formation: Baryons and Photons

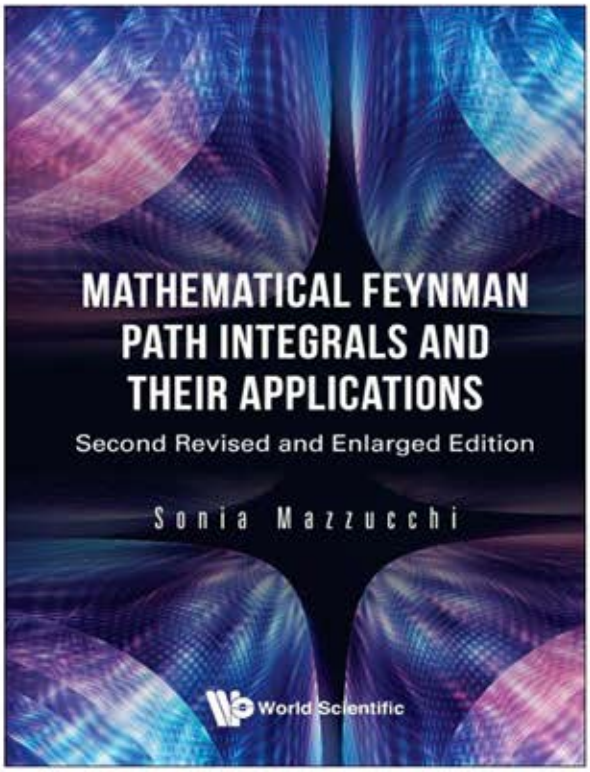
Covariant Loop Quantum Gravity : An Elementary Introduction to Quantum Gravity and Spinfoam Theory
Carlo Rovelli and Francesca Vidotto



Contents

Part I FOUNDATIONS
1 Spacetime as a quantum object
2 Physics without time
3 Gravity
4 Classical discretization
Part II THREE-DIMENSIONAL THEORY
5 Three-dimensional euclidean theory
6 Bubbles and the cosmological constant
Part III THE REAL WORLD
7 The real world: four-dimensional lorentzian theory
8 Classical limit
9 Matter
Part IV PHYSICAL APPLICATIONS
10 Black holes
11 Cosmology
12 Scattering
13 Final remarks

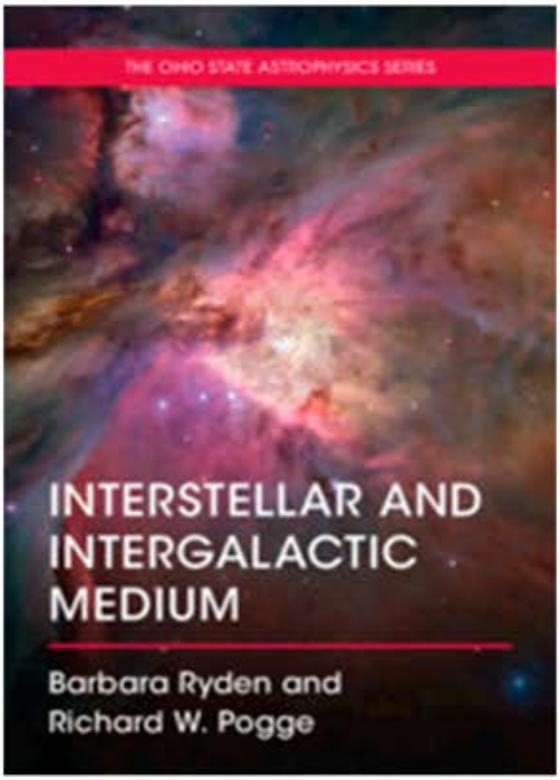
Mathematical Feynman Path Integrals and Their Applications
Sonia Mazzucchi



Contents

1. **Introduction**
2. **A primer in measure theory**
3. **Measure on infinite dimensional spaces**
4. **Projective systems of functionals and the Fourier transform approach**
5. **Infinite dimensional oscillatory integrals**
6. **Feynman path integrals and the Schrödinger equation**
7. **The stationary phase method and the semiclassical limit of quantum mechanics**
8. **Open quantum systems**
9. **Alternative approaches to Feynman path integration**

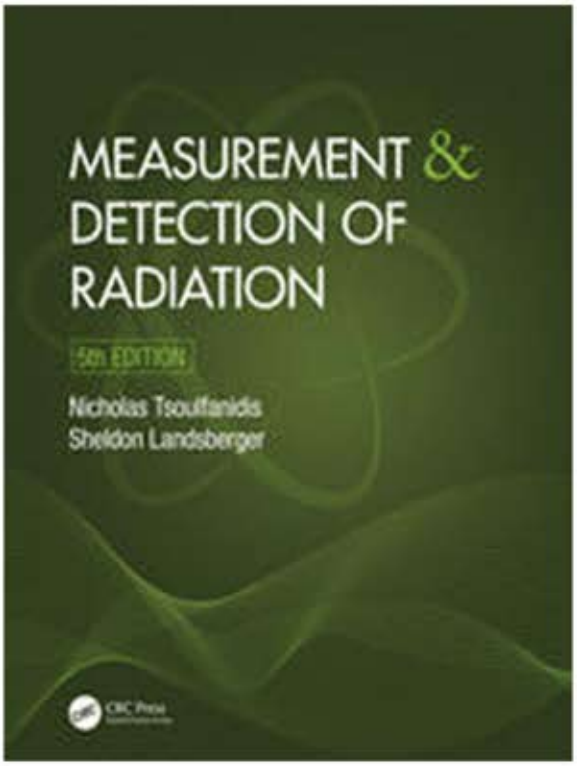
Interstellar and Intergalactic Medium
Barbara Ryden and Richard W. Pogge



Contents

Preface
1 Introduction
2 Cold Neutral Medium
3 Warm Neutral Medium
4 Warm Ionized Medium and Ionized Nebulae
5 Hot Ionized Medium
6 Interstellar Dust
7 Molecular Clouds
8 Circumgalactic and Intracluster Gas
9 Diffuse Intergalactic Medium
10 Warm-Hot Intergalactic Medium

Measurement and Detection of Radiation
Nicholas Tsoulfanidis and Sheldon Landsberger



Contents

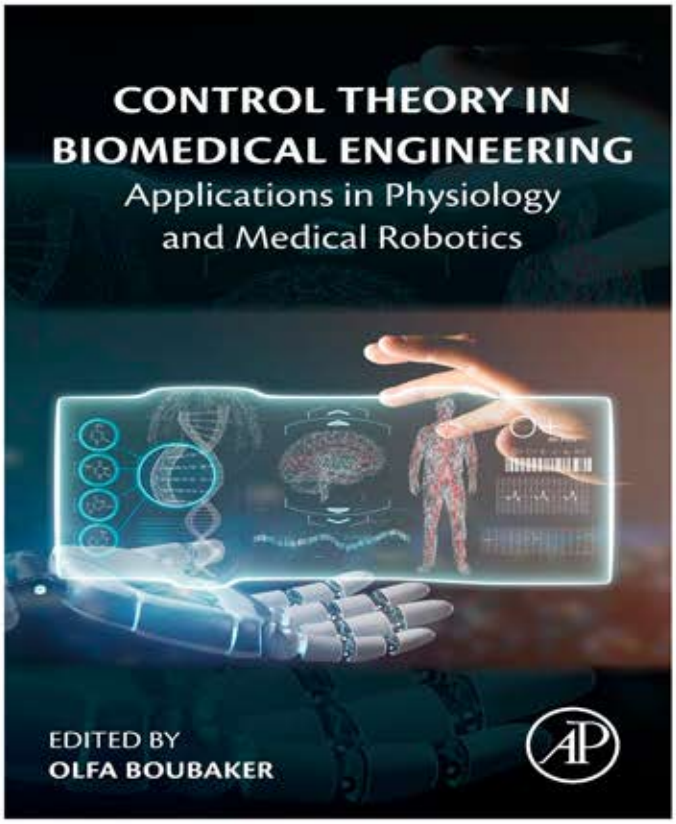
Chapter 1. Introduction to Radiation Measurements
Chapter 2. Errors of Radiation Counting
Chapter 3. Review of Atomic and Nuclear Physics
Chapter 4. Energy Loss and Penetration of Radiation through Matter
Chapter 5. Gas-Filled Detectors
Chapter 6. Scintillation Detectors
Chapter 7. Semiconductor Detectors
Chapter 8. Relative and Absolute Measurements
Chapter 9. Introduction to Spectroscopy
Chapter 10. Electronics for Radiation Counting
Chapter 11. Data Analysis Methods
Chapter 12. Photon (γ-Ray and X-Ray) Spectroscopy
Chapter 13. Charged-Particle Spectroscopy
Chapter 14. Neutron Detection and Spectroscopy
Chapter 15. Activation Analysis and Related Techniques
Chapter 16. Health Physics Fundamentals
Chapter 17. Nuclear Forensics
Chapter 18. Nuclear Medicine Instrumentation

Faraday Discussions
Vol. 226 Air Quality in Megacities

Contents

Introductory Lecture
Introductory lecture: air quality in megacities
Papers and Discussions
Asia Pacific road transportation emissions, 1900–2050
Long-term trends in the contribution of PM2.5 sources to organic carbon (OC) in the Los Angeles basin and the effect of PM emission regulations
General discussion: Trends in emissions concentrations
Tracer-based characterization of source variations of PM2.5 and organic carbon in Shanghai influenced by the COVID-19 lockdown
Diurnal and weekly patterns of primary pollutants in Beijing under COVID-19 restrictions
Variability of physical meteorology in urban areas at different scales: implications for air quality
Using a coupled LES aerosol–radiation model to investigate the importance of aerosol–boundary layer feedback in a Beijing haze episode
General discussion: Urban air quality; Meteorological influences and air quality trends
Multiphase chemistry experiment in Fogs and Aerosols in the North China Plain (McFAN): integrated analysis and intensive winter campaign 2018
Insights into air pollution chemistry and sulphate formation from nitrous acid (HONO) measurements during haze events in Beijing
Vertical profile of particle hygroscopicity and CCN effectiveness during winter in Beijing: insight into the hygroscopicity transition threshold of black carbon
PM2.5 pollution in China's Guanzhong Basin and the USA's San Joaquin Valley mega-regions
An evaluation of source apportionment of fine OC and PM2.5 by multiple methods: APHH-Beijing campaigns as a case study
General discussion: Multiphase atmospheric chemistry, and source apportionment
Is reducing new particle formation a plausible solution to mitigate particulate air pollution in Beijing and other Chinese megacities?
Formation and growth of sub-3 nm particles in megacities: impact of background aerosols
The persistence of a proxy for cooking emissions in megacities: a kinetic study of the ozonolysis of self-assembled films by simultaneous small and wide angle X-ray scattering (SAXS/WAXS) and Raman microscopy

Using highly time-resolved online mass spectrometry to examine biogenic and anthropogenic contributions to organic aerosol in Beijing†
Sources of non-methane hydrocarbons in surface air in Delhi, India
Simulation of primary and secondary particles in the streets of Paris using MUNICH
Molecular characterization of size-segregated organic aerosols in the urban boundary layer in wintertime Beijing by FT-ICR MS
General discussion: Aerosol formation and growth; VOC sources and secondary organic aerosols
Avoiding high ozone pollution in Delhi, India
Investigating the background and local contribution of the oxidants in London and Bangkok
The role of a suburban forest in controlling vertical trace gas and OH reactivity distributions – a case study for the Seoul metropolitan área
A component-specific exposure–mortality model for ambient PM2.5 in China: findings from nationwide epidemiology based on outputs from a chemical transport model
Difference in ambient-personal exposure to PM2.5 and its inflammatory effect in local residents in urban and peri-urban Beijing, China: results of the AIRLESS Project
Air quality and health benefits of China's current and upcoming clean air policies
General discussion: Sources, sinks and mitigation methods; evaluation of health impacts



Contents

Part I Applications in physiology
1 Modeling and control in physiology
2 Mathematical modeling of cholesterol homeostasis
3 Adaptive control of artificial pancreas systems for treatment of type 1 diabetes
4 Modeling and optimal control of cancer-immune system
5 Genetic fuzzy logic based system for arrhythmia classification
6 Modeling simple and complex handwriting based on EMG signals
Part II Applications in medical robotics
7 Medical robotics
8 Wearable mechatronic devices for upper-limb amputees
9 Exoskeletons in upper limb rehabilitation: A review to find key challenges to improve functionality
10 A double pendulum model for human walking control on the treadmill and stride-to-stride fluctuations: Control of step length, time, velocity, and position on the treadmill
11 Continuum NasoXplorer manipulator with shape memory actuators for transnasal exploration
12 Tunable stiffness using negative Poisson's ratio toward load-bearing continuum tubular mechanisms in medical robotics
