

Astrochemistry: The Physical Chemistry of the Universe, 2nd Edition Andrew M. Shaw

Contents

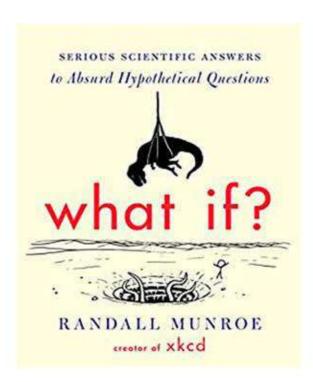

- 1 The Molecular Universe
- 2 Starlight, Galaxies, and Clusters
- 3 Atomic and Molecular Astronomy
- 4 Stellar Chemistry
- 5 The Interstellar Medium
- **6 Meteorite and Comet Chemistry**
- 7 Planetary Chemistry
- **8 Prebiotic Chemistry**
- 9 Primitive Life Forms
- 10 Mars and Titan Habitats for Life?

Astrophysical Magnetic Fields: From Galaxies to the Early Universe Anvar Shukurov and Kandaswamy Subramanian

- 1 Introduction
- 2 Elements of Magnetohydrodynamics
- 3 Observational Signatures of Magnetic Fields
- 4 Polarization and Depolarization
- 5 The Concept of Hydromagnetic Dynamo
- 6 The Fluctuation Dynamo
- 7 The Mean-Field Dynamo
- 8 The Fluctuation and Mean-Field Dynamos Unified
- 9 Seed Magnetic Fields
- 10 Interstellar and Intergalactic Medium
- 11 Kinematic Dynamos in Galaxies
- 12 Non-linear Mean-Field Galactic Dynamos
- 13 Theory and Observations Put Together
- 14 Magnetohydrodynamics of Galaxy Clusters
- 15 Magnetic Fields in the Early Universe
- 16 Signatures of Primordial Magnetic Fields

What if?: serious scientific answers to absurd hypothetical questions Munroe, Randall

Questions

Global windstorm

Relativistic baseball

Spent fuel pool

Weird (and worrying) questions from the What if? inbox, #1

New York-style time machine

Soul mates

Laser pointer

Periodical wall of the elements

Everybody jump

A mole of moles

Hair dryer

Weird (and worrying) questions from the What if? inbox, #2

The last human light

Machine-gun jetpack

Rising steadily

Weird (and worrying) questions from the What if? inbox, #3

Orbital submarine

Short-answer section

Lightning

Weird (and worrying) questions from the What if? inbox, #4

Human computer

Little planet

Steak drop

Hockey puck

Common cold

Glass half empty

Weird (and worrying) questions from the What if? inbox, #5

Alien astronomers

No more DNA

Interplanetary Cessna

Weird (and worrying) questions from the What if? inbox, #6

Yoda

Flyover states

Falling with helium

Everybody out

Weird (and worrying) questions from the What if? inbox, #7

Self-fertilization

High throw

Lethal neutrinos

Weird (and worrying) questions from the What if? inbox, #8

Speed bump

Lost immortals

Orbital speed

FedEx bandwidth

Free fall

Weird (and worrying) questions from the What if? inbox, #9

Sparta

Drain the oceans

Drain the oceans: part II

Twitter

Lego bridge

Longest sunset

Random sneeze call

Weird (and worrying) questions from the What if? inbox, #10

Expanding Earth

Weightless arrow

Sunless Earth

Updating a printed Wikipedia

Facebook of the dead

Sunset on the British Empire

Stirring tea

All the lightning

Loneliest human

Weird (and worrying) questions from the What if? inbox, #11

Raindrop

SAT guessing

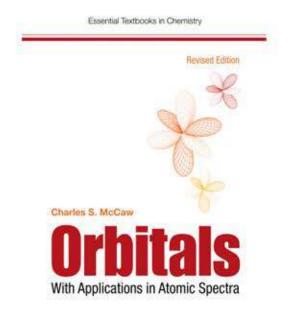

Neutron bullet

Weird (and worrying) questions from the What if? inbox, #12

Richter 15.

Orbitals: With Applications in Atomic Spectra

Charles S McCaw

Contents

Chapter 1. Fundamentals

Chapter 2 Orbitals in the Hydrogen Atom

Chapter 3 Multi-Electron Atoms

Chapter 4 Wavefunctions in Multi-Electron Atoms

Chapter 5 Orbitals in Molecules

Chapter 6 Atomic Spectroscopy

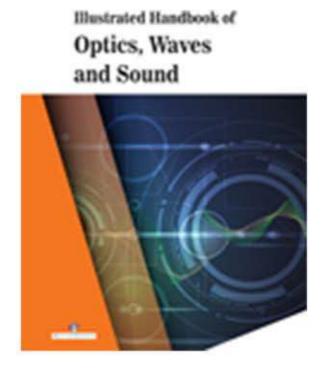

Table of contents

Chapter 1 Introduction to optics

Chapter 2 Waves

Chapter 3 Wave sound

Chapter 4 Interference

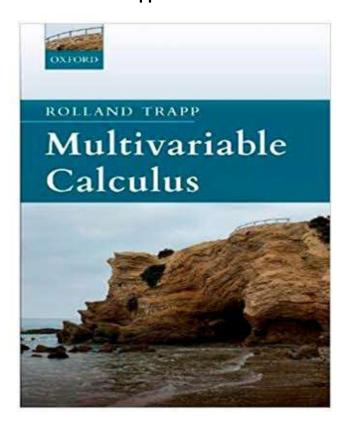

Chapter 5 Polarization

Chapter 6 Diffraction

Chapter 7 Reflection and refraction

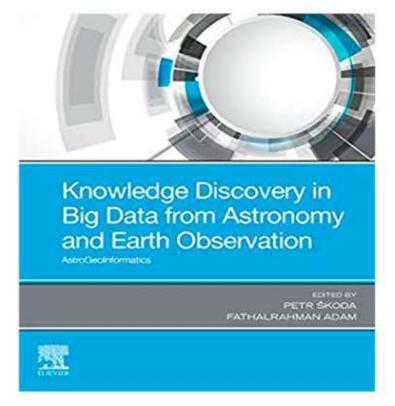

Chapter 8 Spherical surfaces

Multivariable Calculus Rolland Trapp

- 1. Introduction to three dimensions
- 2. Introduction to vectors
- 3. Differentiation
- 4. Integration
- 5. Vector Analysis

Knowledge Discovery in Big Data from Astronomy and Earth Observation: Astrogeoinformatics Edited by Peter Skoda and Fathalrahman Adam

Contents

PART I DATA

- 1 Methodologies for Knowledge Discovery Processes in Context of AstroGeoInformatics
- 2 Historical Background of Big Data in Astro and Geo Context

PART II INFORMATION

- 3 AstroGeoInformatics: From Data Acquisition to Further Application
- 4 Synergy in Astronomy and Geosciences
- 5 Surveys, Catalogues, Databases, and Archives of Astronomical Data
- 6 Surveys, Catalogues, Databases/Archives, and State-of-the-Art Methods for Geoscience Data Processing
- 7 High-Performance Techniques for Big Data Processing
- 8 Query Processing and Access Methods for Big Astro and Geo Databases
- 9 Real-Time Stream Processing in Astronomy

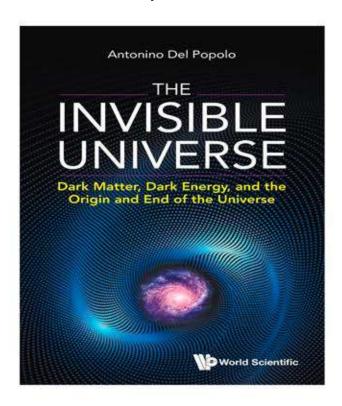

PART III KNOWLEDGE

- **10 Time Series**
- 11 Advanced Time Series Analysis of Generally Irregularly Spaced Signals: Beyond the Oversimplified Methods
- 12 Learning in Big Data: Introduction to Machine Learning
- 13 Deep Learning an Opportunity and a Challenge for Geo- and Astrophysics
- 14 Astro- and Geoinformatics Visually Guided Classification of Time Series Data
- 15 When Evolutionary Computing Meets Astro- and Geoinformatics

PART IV WISDOM

- 16 Multiwavelength Extragalactic Surveys: Examples of Data Mining
- 17 Applications of Big Data in Astronomy and Geosciences: Algorithms for Photographic Images Processing and Error Elimination
- 18 Big Astronomical Datasets and Discovery of New Celestial Bodies in the Solar System in Automated Mode by the CoLiTec Software
- 19 Big Data for the Magnetic Field Variations in Solar-Terrestrial Physics and Their Wavelet Analysis
- 20 International Database of Neutron Monitor Measurements: Development and Applications
- 21 Monitoring the Earth Ionosphere by Listening to GPS Satellites
- 22 Exploitation of Big Real-Time GNSS Databases for Weather Prediction
- 23 Application of Databases Collected in Ionospheric Observations by VLF/LF Radio Signals
- 24 Influence on Life Applications of a Federated Astro-Geo Database

The Invisible Universe : Dark Matter, Dark Energy, and the Origin and End of the Universe Antonino Del Popolo

Contents

Chapter 1 A Brief History Of The Big Bang Theory

Chapter 2 The Primordial Universe

Chapter 3 How Do We Know That Dark Matter Exists?

Chapter 4 The Harmony Of The World

Chapter 5 What Is Dark Matter?

Chapter 6 The Golden Age Of Particle Physics: The

Standard Model

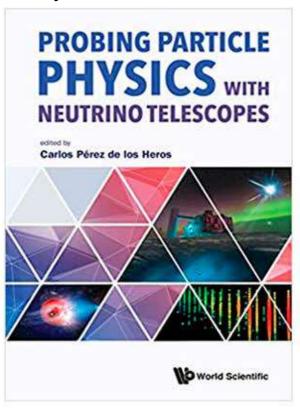

Chapter 7 Dark Matter Candidates

Chapter 8 Detection Of Dark Matter

Chapter 9 Dark Energy

Chapter 10 End Of The Universe

Probing Particle Physics with Neutrino Telescopes Edited By: Carlos Pérez de los Heros

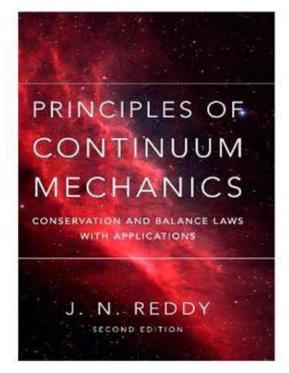

- **1 Introduction: Particle Physics with Cosmic Accelerators**
- 2 Neutrino Telescopes
- 3 The Atmospheric Neutrino Flux
- 4 Probing High-Energy Interactions of Atmospheric and Astrophysical Neutrinos
- **5 Standard Neutrino Oscillations**
- 6 Sterile Neutrinos, Non-Standard Neutrino Oscillations and Tests of Lorentz Invariance
- 7 Tests of Dark Matter Scenarios with Neutrino Telescopes
- **8 TeV Gravity Searches**
- 9 Probing Large Extra Dimensions with Neutrino Telescopes
- 10 Signatures of Supersymmetry in Neutrino Telescopes
- 11 Searches for Magnetic Monopoles and Other Stable Massive Particles
- 12 Primordial Black-Hole Signatures in Neutrino Telescopes

Principles of Continuum Mechanics : Conservation and Balance Laws with Applications

2nd Edition

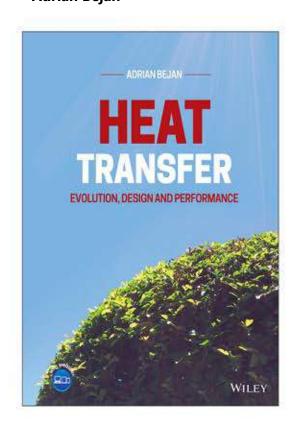

J. N. Reddy

Contents

- 1. Introduction
- 2. Vectors and tensors
- 3. Kinematics of a continuum
- 4. Stress vector and stress tensor
- 5. Conservation of mass and balance of momenta and energy
- 6. Constitute equations
- 7. Applications in heat transfer, fluid mechanics, and solid mechanics

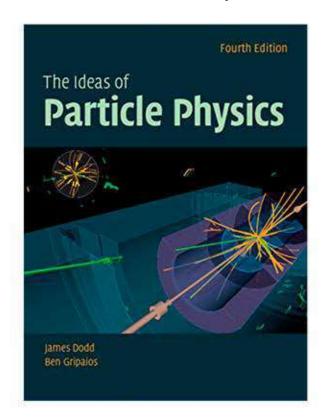

Heat Transfer: Evolution, Design and Performance Adrian Bejan

- 1 Introduction
- **2 Unidirectional Steady Conduction**
- **3 Multidirectional Steady Conduction**
- 4 Time-Dependent Conduction
- 5 External Forced Convection
- **6 Internal Forced Convection**
- 7 Natural Convection
- 8 Convection with Change of Phase
- 9 Heat Exchangers
- 10 Radiation

The Ideas of Particle Physics 4th Edition

James E. Dodd and Ben Gripaios

Contents

Part I Introduction

- 1. Matter and light
- 2. Special relativity
- 3. Quantum mechanics
- 4. Relativistic quantum theory

Part II. Basic Particle Physics:

- 5. The fundamental forces
- 6. Symmetry in the microworld
- 7. Mesons
- 8. Strange particles

Part III. Strong Interaction Physics:

- 9. Resonance particles
- 10. SU(3) and guarks

Part IV. Weak Interaction Physics I:

- 11. The violation of parity
- 12. Fermi's theory of the weak interactions
- 13. Two neutrinos
- 14. Neutral kaons and CP violation

Part V. Weak Interaction Physics II:

- 15. The current-current theory of the weak interactions
- 16. An example leptonic process: electron-neutrino scattering
- 17. The weak interactions of hadrons
- 18. The W boson

Part VI. Gauge Theory of the Weak Interactions:

- 19. Motivation for the theory
- 20. Gauge theory
- 21. Spontaneous symmetry breaking
- 22. The Glashow-Weinberg-Salam model
- 23. Consequences of the model
- 24. The hunt for the W±. Z0 bosons

Part VII. Deep Inelastic Scattering:

- 25. Deep inelastic processes
- 26. Electron-nucleon scattering
- 27. The deep inelastic microscope
- 28. Neutrino-nucleon scattering
- 29. The quark model of the structure functions

Part VIII. Quantum Chromodynamics – The Theory of Quarks:

- 30. Coloured quarks
- 31. Colour gauge theory
- 32. Asymptotic freedom
- 33. Quark confinement

Part IX. Electron-Positron Collisions:

- 34. Probing the vacuum
- 35. Quarks and charm
- 36. Another generation

Part X. The Standard Model:

- 37. The model in summary
- 38. Precision tests of the model
- 39. Flavour Mixing and CP violation
- 40. The Large Hadron Collider
- 41. Discovery and properties of the Higgs boson

Part XI. Beyond the Standard Model:

- 42. Reasons to go beyond
- 43. Neutrino masses and mixing
- 44. Grand unification
- 45. Supersymmetry
- 46. Composite Higgs models
- 47. Axions and the Strong CP problem

Part XII. Particle Physics and Cosmology:

- 48. The big bang and inflation
- 49. The cosmic microwave background
- 50. The matter-anti-matter asymmetry
- 51. Dark matter
- 52. Dark energy

Part XIII. Gravity and Gravitational Waves:

- 53. From general relativity to gravitational waves
- 54. The discovery of gravitational waves
- 55. Gravitational wave and multi-messenger astronomy
- 56. The future: Super Ligo and LISA

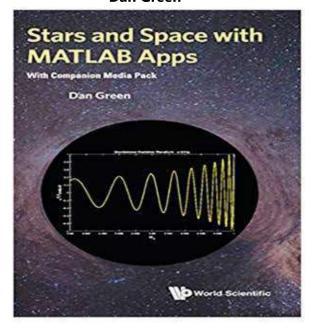

Part XIV. String Theory:

- 57. Origins the hadronic string
- 58. String theory to M-theory
- 59. The AdS-CFT correspondence
- 60. Consequences of the theory

Part XV. The Future - To Boldly Go!:

- 61. Accelerators, observatories and other experiments
- 62. Known unknowns
- 63. Glittering prizes
- 64. Unknown unknowns: it must be beautiful

Stars and Space with MATLAB Apps : With Companion Media Pack Dan Green

Contents

Chapter 1 Getting Started with Matlab

Chapter 2 Apps for Stars

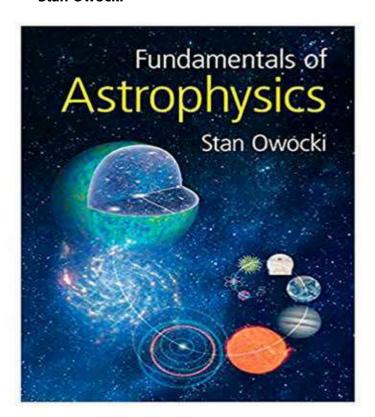

Chapter 3 Stellar Evolution

Chapter 4 Apps for Solar Exploration

Chapter 5 Apps for Star Treks

Chapter 6 Additional Miscellaneous Topics

Fundamentals of astrophysics Stan Owocki

Contents

Part I Stellar Properties

- 1 Introduction
- 2 Astronomical Distances
- **3 Stellar Luminosity**
- 4 Surface Temperature from a Star's Color
- **5 Stellar Radius from Luminosity and Temperature**
- 6 Composition and Ionization from Stellar Spectra
- 8 Stellar Ages and Lifetimes
- 9 Stellar Space Velocities
- 10 Using Binary Systems to Determine Masses and Radii
- 11 Stellar Rotation
- 12 Light Intensity and Absorption
- 13 Observational Methods
- 14 Our Sun

Part II Stellar Structure and Evolution

- 15 Hydrostatic Balance between Pressure and Gravity
- 16 Transport of Radiation from Interior to Surface
- 17 Structure of Radiative versus Convective Stellar Envelopes
- 18 Hydrogen Fusion and the Mass Range of Stars
- 19 Post-Main-Sequence Evolution: Low-Mass Stars
- 20 Post-Main-Sequence Evolution: High-Mass Stars

Part III - Interstellar Medium and Formation of Stars and Planets

- 21 The Interstellar Medium
- 22 Star Formation
- 23 Origin of Planetary Systems
- 24 Water Planet Earth
- 25 Extra-Solar Planets

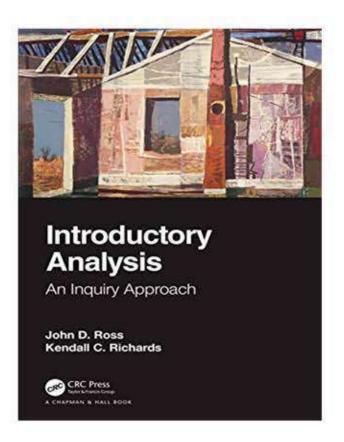

Part IV Our Milky Way and Other Galaxies

- 26 Our Milky Way Galaxy
- 27 External Galaxies
- 28 Active Galactic Nuclei and Quasars
- 29 Large-Scale Structure and Galaxy Formation and Evolution

Part V Cosmology

- 30 Newtonian Dynamical Model of Universe Expansion
- 31 Accelerating Universe with a Cosmological Constant
- 32 The Hot Big Bang
- 33 Eras in the Evolution of the Universe

Introductory Analysis: An Inquiry Approach John D. Ross, and Kendall C. Richards

Contents

- **P1 Exploring Mathematical Statements**
- **P2 Proving Mathematical Statements**
- **P3 Preliminary Content**

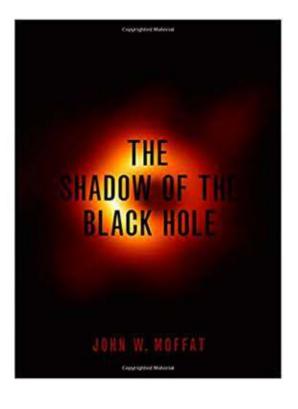

Main Content

- 1 Properties of R
- **2 Accumulation Points and Closed Sets**
- **3 Open Sets and Open Covers**
- **4 Sequences and Convergence**
- **5 Subsequences and Cauchy Sequences**
- **6 Functions, Limits, and Continuity**
- 7 Connected Sets and the Intermediate Value Theorem
- **8 Compact Sets**
- **9 Uniform Continuity**
- 10 Introduction to the Derivative
- 11 The Extreme and Mean Value Theorems
- 12 The Definite Integral: Part I
- 13 The Definite Integral: Part II
- 14 The Fundamental Theorem(s) of Calculus
- 15 Series

Extended Explorations

- **E1 Function Approximation**
- **E2 Power Series**
- **E3 Sequences and Series of Functions**
- **E4 Metric Spaces**
- **E5 Iterated Functions and Fixed Point Theorems**

The Shadow of the Black Hole ContentsJohn W. Moffat

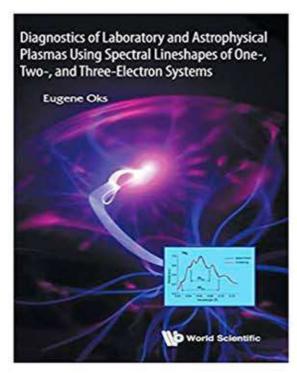

Contents

Acknowledgments Prologue: LIGO

- **Chapter 1. Gravitation and Black Holes**
- **Chapter 2. Thermodynamics, Quantum Physics, and Black Holes**
- **Chapter 3. Stars and Black Holes**
- **Chapter 4. Early Observations of Black Holes**
- **Chapter 5. Wormholes, Time Travel, and Other Exotic Theories**
- **Chapter 6. Origins of Gravitational Waves and Detectors**
- Chapter 7. The Biggest Ears in the Sky: LIGO
- **Chapter 8. LIGO/ Virgo Listens to Neutron Stars**
- **Chapter 9. Alternative Gravitational Theories**
- **Chapter 10. The Biggest Eyes in the Sky: The EHT**

Diagnostics of Laboratory and Astrophysical Plasmas
Using Spectral Lineshapes of One-, Two-, and Three-Electron Systems
Eugene Oks

Contents

Part I. Non-Turbulent Plasmas

Free Access

Chapter 1. Electron Density

Chapter 2. Temperatures

Chapter 3. Magnetic Field

Chapter 4. Effective Charge of Ions

Part II. Plasmas Containing Oscillatory Electric Fields

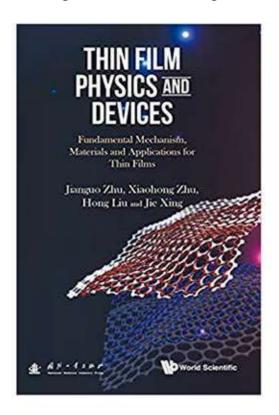

Chapter 5. Low-frequency Electrostatic Turbulence

Chapter 6 Principles of Spectroscopic Diagnostics of Plasmas
Containing Quasimonochromatic Electric Fields (QEF)

Chapter 7 Langmuir Waves

Chapter 8 Transverse Microwave-, Laser-, and/or Laser-induced Fields

Thin Film Physics and Devices : Fundamental Mechanism, Materials and Applications for Thin Films Jianguo Zhu and Xiaohong Zhu

Contents

Chapter 1. Foundation of Vacuum Technology

Chapter 2. Physical Preparation Technology of Thin Films

Chapter 3. The Chemical Synthesis Technology of Thin Films

Chapter 4. Related Technologies of Film Preparation

Chapter 5. Formation and Growth of Thin Films

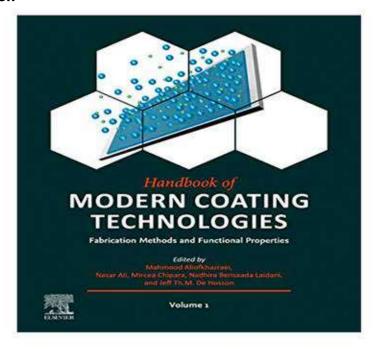

Chapter 6. Structure and Defects of Thin Films

Chapter 7. Physical Properties of Thin Films

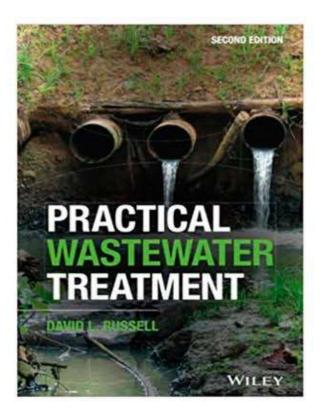

Chapter 8. Some Kinds of Important Functional Film Materials

Chapter 9. The Application of Thin Films

Handbook of Modern Coating Technologies: Fabrication Methods and Functional Properties Editors: Mahmood Aliofkhazraei, Ali Nasar, Mircea Chipara, Nadhira Bensaada Laidani, Jeff Th.M. De Hosson

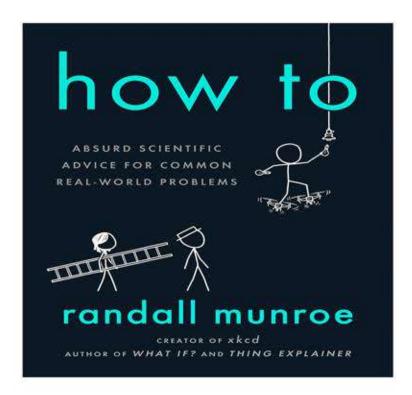

- 1. Nanocoatings by sol-gel processes for functionalisation of polymer surfaces and textiles
- 2. Mechanical fabrication methods of nanostructured surfaces such surface mechanical attrition treatment (SMAT)
- 3. Polymer nanofabrication and its plasma processing
- 4. Chemical vapor deposition of nanostructured materials at atmospheric pressure
- 5. Langmuir-Blodgett Methodology: a Versatile Technique to Build Nanoparticle Films
- 6. Flame pyrolysis a cost-effective approach for depositing thin functional coatings...
- 7. Confined-Plume Chemical Deposition
- 8. Electrophoretic Deposition: an effective technique to obtain functionalized nanocoatings
- 9. In vitro and in vivo particle coating for oral targeting and drug delivery
- 10. Use of electrospun coatings to improve the performance of multilayer biopolymeric film
- 11. Corrosion protection by nanostructured coatings
- 12. Tribological Behaviour of Electroless Ni-B Coatin
- 13. Effect of Peening on Tribological and Mechanical Behavior of Bio-Implant Materials
- 14. Improving the efficiency of the cutting tool made of ceramic when machining hardened steel
- 15. Incorporation of Elastomeric Secondary Phase into Epoxy Matrix influences Mechanical properties of Epoxy coatings
- 16. Enhancement of biocompatibility by coatings
- 17. Bionic Colloidal Crystal Coatings

- 1 Composition, Chemistry, and Regulatory Framework
- 2 What is Water Pollution?
- **3 Groundwater and its Treatment**
- 4 Statistics of Measurements
- 5 The Flow of Water and Wastewater
- 6 Troubleshooting and Emergency Planning
- 7 Chemistry and Analyses
- 8 Basic Water and Wastewater Treatment Techniques
- 9 Biological Wastewater Treatment
- **10 Anaerobic Treatment**
- 11 Precipitation and Sedimentation
- 12 Granular Filtration Theory and Practice
- **13 Skin Filtration**
- 14 Membrane Filters and Reverse Osmosis
- 15 Disinfection
- 16 Phosphorus and Nitrogen Removal
- 17 Carbon Adsorption
- 18 Ion Exchange
- 19 Dissolved Air Flotation and Techniques
- 20 Coagulation, Flocculation and Chemical Treatment
- 21 Heat Transfer Processes: Boilers, Heat Exchangers and Cooling Towers
- 22 Evaluating an Existing Wastewater Treatment Plant Design using Modeling Software

How to: absurd scientific advice for common real-world problems Randall Munroe

How to blow out birthday candles

How to walk a dog

19. How to send a file

20. How to charge your phone

21. How to take a selfie

22. How to catch a drone

23. How to tell if you're a Nineties Kid

24. How to win an election

25. How to decorate a tree

How to build a highway

26. How to get somewhere fast

27. How to be on time

28. How to dispose of this book

How to change a lightbulb.

Contents

Introduction

- 1. How to jump really high
- 2. How to throw a pool party
- 3. How to dig a hole
- 4. How to play the piano

How to listen to music

- 5. How to make an emergency landing
- 6. How to cross a river
- 7. How to move
